Thank you for purchasing our Embedded DVR. This manual is applicable to Home Series. Please go through this User Manual before operating so as to use the DVR in the correct and safe way.

The content of this manual is subject to change without notice.
1 PRECAUTIONS

Please observe the following precautions, in order to avoid damage or loss of data caused by improper operation.

- Install DVR within the temperature and humidity requirements.
- Do not install DVR in humid, dusty or smoky environment.
- Require a solid mounting surface for installation.
- Do not block any ventilation openings. Install under the manufacturer's instructions.
- Do not spill liquid of any kind on device.
- Do not put any other equipment on device.
- Do not dismantle the device.
- Select specified HDD by manufacture.

2 NOTE

- This user manual is for reference only, subject to available products.
- This user manual may contain inaccurate data or printing error.
- Updates to the manual or products themselves will occur without further notification.
- Contact the customer service department when you are in doubt or documentations.

3 PRODUCT INTRODUCTION

3.1 SUMMARY

Our Embedded Digital Video Recorder is an excellent digital surveillance product which adopts H.264 video compression, hard disk recording, TCP/IP transmission, and a Linux based OS in addition to some of the more advanced technologies in the information technology industry. This enables a more stable, reliable and high picture quality.

These products up to the GB 20815-2006《Surveillance DVR》, support synchronized video and audio recording, playback, and monitoring. This series also supports network based system control, as well as excellent network streaming capabilities.

3.2 FEATURES

Features switched according to the soft/hardware edition.

- **Live surveillance**
  - composite video signal (BNC) or VGA output
  - Live video by monitor, TV or display devices
  - Single screen / four-screen / nine-screen / sixteen-screen output
  - Privacy masking, character overlay, unusual states message,

- **Compression**
  - Apply H.264 video compression and G.711 audio compression.

- **Recording**
  - Motion detection, alarm linkage recording mode, SATA HDD and SMART tech of local HDD.
  - USB backup or network backup.

- **Playback**
  - Video searching, playback, and backup via head end or web interface.
  - Multiple playback modes: slow motion, fast forward, frame by frame and skip backward.
  - Network backup or USB 2.0 ports for backup devices.
  - Multi-channel playback synchronization

- **Camera control & Alarm**
  - PTZ (using RS-485), camera control, preset, tour, pattern setting and call.
  - Three-dimensional positioning ( in PTZ condition )

- **Alarm management**
  - Multi-channel alarm inputs could be connected with standard devices such as infrared, smoke detection, vibration alarm.
  - Alarm detection for motion, video loss and masking.
  - Multi-channel alarm outputs which link alarm with light control.

- **Interface**
✓ USB2.0, Ethernet interface, RS485, etc.

- Network
  ✓ Support TCP/IP and TCP, UDP, RTP transmission.
  ✓ Support online real-time surveillance and record search, playback, manage.
  ✓ Support dynamic IP addressing, PPPOE, DDNS.
  ✓ Access DVR by WEB interface (Internet Explorer).
  ✓ NTP timing, alarm by Email, etc.

- Operation
  ✓ Support front panel, remote control and mouse control.
  ✓ Simple operation, menu driven with help tips.

4 INSTALLATION

4.1 CHECK DVR AND ITS ACCESSORIES

Please carefully check the contents following the packing list. If any of the items are missing, please contact with your dealer.

4.2 HDD INSTALLATION

Preparation:
A Phillips head screwdriver is required to disassemble and reassemble the unit.
This series DVR allows a maximum 2 Hard disks. HDD capacity is tested up to 2TB at the time of writing.

Steps:
- Remove the metal top cover by removing two screws from the sides of the cover.
- Place the hard disks on a flat table and fasten it by screws.
- Connect the power and data cables to the HDD.
- Reinstall the metal top cover and fasten it by screws.

Caution:
- Only use HDD specified by the manufacturer.
- HDD will be formatted automatically during startup, it may cause data loss.
- Recording duration is decided by HDD capability and DVR parameters (recording setup, encoding setup).
  Please see the form in Chapter 7.1 (for reference only).
### 4.3 FRONT PANEL

#### Front Panel

The front panel of R8702/R9702 is shown as follow:

![Front Panel Diagram](image)

<table>
<thead>
<tr>
<th>Name</th>
<th>Icon</th>
<th>Function</th>
</tr>
</thead>
<tbody>
<tr>
<td>Power button</td>
<td><img src="image" alt="Power Button Icon" /></td>
<td>Press this button to boot up or shut down DVR.</td>
</tr>
<tr>
<td>Shift</td>
<td><img src="image" alt="Shift Icon" /></td>
<td>In textbox, click this button to switch between numeral, character and other functions.</td>
</tr>
<tr>
<td>Up/Down</td>
<td><img src="image" alt="Up/Down Icon" /></td>
<td>Activate current control switch, and then move up and down; Modify setup, Increase/decrease numeral; Channels can be switched while playing single channel record; Assistant function (Such as PTZ menu), performs as direction control for PTZ; In textbox, enter the number, increment +1 and decrement -1; Multi-screen switch.</td>
</tr>
<tr>
<td>Left/Right</td>
<td><img src="image" alt="Left/Right Icon" /></td>
<td>Activate current control switch, and then move left and right; Press left/right buttons to control the playback progress bar when playback video; Performs as direction control for PTZ; Unilaterally switch.</td>

</tbody>
</table>

**Alarm input connection**

Normal open or Normal close type

Please parallel connect COM end and GND end of the alarm detector to the GND end of the DVR

Please connect the NC port (or NO port) of the alarm sensor to the DVR alarm input (ALARM)

Use the same ground with that of DVR if you use external power to the alarm device.

**Alarm output connection**

This alarm output use relay output, please refer to the related parameters while connecting the relay to avoid overload or damage to the DVR.

Figure 0-1 Relay parameters

**PTZ connection**

Decoder A (B) line connects with DVR RS-485 A (B) line. If multiple decoders are connected, please connect a 120 Ω resistance in parallel at the A (B) line distal to minimize the control signal distortion caused by reflection.
5 LOCAL OPERATION GUIDE

5.1 POWER ON /OFF OPERATION

5.1.1 POWER ON

Connect power supply and press the power button on the front panel to startup the DVR. The power light is on and “” displayed on the LCD during startup. Multiple live view is defaulted when turn on DVR unless it’s in the period which set for recording.

Note:
Power supply has to match with DVR, any other substitutes are not allowed.

5.1.2 POWER OFF

- Hold down on-off key to turn off device (only operated by the user who has power off authority).
- 【Main Menu】→【Power off】→【Power off】 (Tip: This is the recommended method to shut down, in order to avoid damaging the HDD/system).

Note: turn off the device and switch off the power when changing HDD

5.1.3 OUTAGE RECOVERY

Reboot after an outage or forceful shutdown, the DVR will save the record before outage and return to normal operation mode.
5.2 LOGGING INTO THE MAIN MENU

Pop up the login dialog by pressing the [Enter] key or left clicking the mouse in live view mode and type in correct username and password.

![System Login dialog](image)

Default users:

<table>
<thead>
<tr>
<th>User Type</th>
<th>Name</th>
<th>Default Password</th>
</tr>
</thead>
<tbody>
<tr>
<td>Administrator</td>
<td>admin</td>
<td>123456</td>
</tr>
<tr>
<td>User</td>
<td>user</td>
<td>123456</td>
</tr>
<tr>
<td>Hidden default</td>
<td>default</td>
<td>123456</td>
</tr>
</tbody>
</table>

**Note:**
- Password security: occur alarm after three times wrong input and system lockout in 30 minutes after 5 unsuccessful login.
- For security consideration, please modify the default password. For information on how to add groups, users and modify users information, please refer *Chapter 5.7.5 Uses Management*.
- Click [123] to toggle the character input method in mouse mode.

5.3 LIVE VIEW

Power on the DVR and enter the default live view mode. There are date, time, channel names and icons which indicate status displayed on screen. The icons represent:

<table>
<thead>
<tr>
<th>Icon</th>
<th>Status Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Shows on scream when in recording</td>
</tr>
<tr>
<td>2</td>
<td>Shows on scream when motion detection</td>
</tr>
<tr>
<td>3</td>
<td>Shows on scream when video loss</td>
</tr>
<tr>
<td>4</td>
<td>Shows on scream when the channel is locked</td>
</tr>
</tbody>
</table>

Switch display screens by the front panel, remote control or mouse control.

If you have enable the screen message for external alarm, video loss, masking, motion detection, network and IP conflict alarm, the below interface would popup when those alarm occur.
5.4 PTZ CONTROL

Right click on the selected screen under live view mode and choose Pan/Tilt/Zoom. You will see the following interface.

5.4.1 PTZ CONTROL

- Control PTZ direction, step size, zoom, focus, IRIS, presets, tour, pattern, border scan, AUX switch, light switch, auto pan.
- Step size controls PTZ speed, e.g. step size 8 is moved faster than step size 1. (you can set 1-8 step size by soft keyboard or keys on front panel)
- Click ◀ and ▶ of zoom, focus and IRIS to modify zoom, focus and brightness.
- Support PTZ eight-direction rotation. (If you are using the front panel, it is only four-direction).
- Quick positioning:
  〈SIT〉: In the middle of direction keys is the quick position key. It only supports mouse control and supported by certain PTZ protocols.
  - Single click to move this point to the screen center.
  - Clicking and dragging a specific region to make the camera to center and zoom accordingly.
5.4.2 PTZ SETTING

- Click 【Set】 to set 【Preset】 , 【Tour】 , 【Pattern】 , 【Border】. Gray keys represent unsupported function.

- 【Preset】 setting: Click 【Preset】 and input a number to assign these coordinates as that number. Click 【Save】 to save these coordinates to that preset number.

- Call 【Preset】: Input preset number and click “preset” on left side to call a specific preset location.

- 【Tour】 setting: Select “Tour”; input numbers in “Path” and “preset”. Click 【Add Preset】 to add one preset in cruise path, repeat to add more than one presets. Click 【Clear Preset】 to delete a preset, repeat to delete more. (Note: This feature is only available in certain protocols)

- Call 【Tour】: Input a path number and click “Tour” on the left side to start this function. Click 【Stop】 to quit.
- **Pattern** setting: Assign a path number, and click start to begin recording. Once recording, go back to the PTZ controls in order to modify your [zoom], [focus] and [IRIS], etc. Click [Stop] in “Pattern” settings once finished, in order to save that pattern number.

- Call **Pattern**: Input a pattern path number and click **Pattern** to call the function. Right click to hide the menu in pattern mode; you can take manual control of the camera to stop the pattern at any time.

- **Border** setting: Move camera to left/right boundary by direction keys and click [Left Border] and [Right Border] to confirm the setting.

- Call **Border**: Click “Border” to start the function, the [Border] button will turn to [Stop]. Right click to hide menu and single click [Stop] to quit.

- Click **Page Switch** again to set additional PTZ functions. These functions are also protocol dependent. (only DH-SD1 and DH-SD2 realize the function presently)
Direction keys are primarily used for menu navigation. If the button is grayed out, then the option is unavailable. Up/down keys is using to select menu items and right/left keys to modify the parameters. Click 【Page Switch】 to go back to the window shown in the picture.

5.5 RECORDING OPERATION

Tip: The “Recording” authority is required for manual recording.

• **Operation interface**
  A right click 【REC】 on remote control in preview mode to enter manual operation directly.

• **Status**
  ✓ **Manual**: The highest priority. Whatever the current mode is, when you select “Manual”, the recording mode will switch to normal.
  ✓ **Schedule**: If this is selected, the system will record according to the schedule (regular, MD or alarm) in “Record Config”.
  ✓ **Stop**: Stop recording

**All start**: All channels start recording
**All stop**: All channels stop recording
• **Start/stop recording**

Please confirm the recording mode before changing the channel status. Here you can check whether the status is on or off (blank refers the recording off; ticked is the recording on). To change the status, select a channel by using the 【 ]] / 【 [ key and then change the recording mode by using the 【 ▲ 】 / 【 ▼ 】 or numeric key.

### 5.6 PLAYBACK

**Playback** interface:
<table>
<thead>
<tr>
<th>Index</th>
<th>Type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Calendar</td>
<td>Click the calendar icon to show the record list (only the dates with blue background take records.) and then click a specific date to call the record. The list will be upgraded automatically.</td>
</tr>
<tr>
<td>2</td>
<td>Time</td>
<td>Select record start and end time.</td>
</tr>
<tr>
<td>3</td>
<td>Play</td>
<td>Playback control: stop/play, pause, fast, slow, previous/next frame in pause.</td>
</tr>
<tr>
<td>4</td>
<td>Record Type</td>
<td>Search record by external alarm, MD and all alarm record</td>
</tr>
<tr>
<td>5</td>
<td>Channel Select</td>
<td>Select record channel</td>
</tr>
<tr>
<td>6</td>
<td>Play</td>
<td>Turn to previous/next record and previous/next channel.</td>
</tr>
<tr>
<td>7</td>
<td>Search</td>
<td>Once your parameters are set, click “Search” to get the results in list</td>
</tr>
<tr>
<td>8</td>
<td>Record Backup</td>
<td>Tick the records you want (enable to select backup records in two channels) and click to call out backup operation menu and confirm the backup. Remove records in backup operation menu by removing the “✓” next to records (single channel list 32 items)</td>
</tr>
<tr>
<td>9</td>
<td>Record List</td>
<td>Search results show in the results list. Click ▲/▼ to move through the records in list which contains maximum 128 search results. Select one of the records and click “ENTER” or double-click left mouse to play the file. Record type: R—regular; A—alarm; M—MD.</td>
</tr>
<tr>
<td>10</td>
<td>Window Select</td>
<td>Select focus window</td>
</tr>
</tbody>
</table>

### 5.6.1 FAST AND SLOW MOTION

<table>
<thead>
<tr>

<td>return to normal playback</td>
</tr>
<tr>
<td>Manual single frame</td>
<td>single frame playback by clicking ◄ and ►</td>
<td></td>
</tr>
<tr>
<td>playback</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

**Tips:**
1. The current playback speed, channel, time and progress are displayed on the front panel.
2. Playback type and speed are related to product version, please refer to panel prompt.

5.7 CONFIGURATION

5.7.1 SETTING

Enter “Setting” under “Configuration”:

![Setting Interface]

**[Time]:** Set the current time

**Note:** Click ☐ Save to save the time modification.

**[Date Format]:** To modify the date display format

**[Daylight Saving Time (DST)]:** Click “DST” to enable the function, and enter the local DST starting and ending time.

**[Date Separator]:** To select the separator for date

**[Time Standard]:** 24 hr or 12 hr display mode

**[Language]:** Language selection (vary by different model).

**[Full HDD Solution]:** When HDD is full, there are two options: “Overwrite” or “Stop recording”. If you select
“Overwrite”, the DVR will overwrite the earliest recorded files and continue recording as all HDD in DVR are full. If you select the “Stop recording” option the DVR will stop recording when it reaches capacity.

【Video Length】: To set time length for each record, default is 60 minutes, the maximum is 120 minutes.
【No.】: Number more than one DVR, click “Ad” button on remote control and input a number to select the corresponding DVR to operate.
【Video Standard】 standard: PAL/NTSC (alter for different model).
【Menu Standby Time】: This ranges from 0-60 minutes. This is the amount of time without a key press before the DVR will automatically logout of the current user.

5.7.2 CHANNEL MANAGEMENT

- **Standard**
  
  The “**Base Config**” interface:

  ![Record Interface](image.png)

  【Channel】: The channel selection
  【Video Compression】: H.264
  【Resolution】: Options are D1/CIF/QCIF; frame rate scope is different depending on channel and resolution. Extra stream of 1~16 channel is forced to QCIF while the main stream parameters are selectable.
  【FPS】: PAL: 1fps-25fps; NTSC: 1fps-30fps

  **Note**: Resolution and frame rate are vary depending on DVR model.

  【Stream Control】: Constant Bit rate or Variable Bit rate. There are 6 levels of image quality in Variable Bit rate, 6 is the best but it is fixed in Constant Bit rate

  【Audio/Video】: Enable or disable the recording of video and audio per channel.

  【More】:
  - Modify 【Channel Name】,【Date Display】,【Channel Title】,【Time Title】 setting
  - Modify 【View Tampering】 setting, tampering area is alterable.
  - Modify 【Snapshot】 setting.
  - Modify 【Prerecord】 setting, the maximum is 30 seconds.
  - Turn on/off 【Redundancy】

  【Copy】: Copy one channel's configuration to other

- **Record plan**

  **Record Config** interface:
【Channel】: To select channel, Green, yellow and red refer to the normal, MD and alarm recording type. Modify it in 【Edit】.
【Duplicate】: To copy one channel's configuration to other

Plan interface:

【Week】: To set time period, you can set 6 periods for each day
【Normal】: Continuous recording
【Motion Detection】: MD enables
【Alarm】: Alarm event recording

5.7.3 NETWORK SETTING

- Standard
Base interface:

【DHCP】: Enable the DVR to obtain an IP address automatically. If this is enabled, the DVR will reboot and search for a DHCP server, and then assign a dynamic IP address. The dynamic IP address will be displayed in the menu. Enter a static IP address if there is no DHCP service available. If you are using the advanced feature PPPoE, then the IP/mask/gateway and DHCP are unable to be changed.

【IP Address】: Use (▲▼) or input numbers to modify IP, then set [subnet mask] and [default gateway] for this IP.
【Preferred DNS】: DNS server IP
【Reserve DNS】: DNS alternate IP
【Physical Address】: Physical address of current net port

- Advanced
  Advance interface:

【PPPOE】 Enable PPPOE
  - Input PPPoE username and password provided by ISP.
  - Operation: Using this feature, the DVR will automatically obtain a public IP address from your ISP. You can then visit the web interface of the DVR by typing this IP into Internet Explorer.
【DDNS】 Enable the DVR to update a DDNS hostname
✓ Select DDNS type (supports various DDNS currently, include CN99 DDNS, NO-IP DDNS, Private DDNS and DynDNS Pro DDNS, with many other compatible) and enable the function; Input the update server IP, port, DNS, username and password. Once setup, you can then login via the web client by using this DNS in Internet Explorer.
✓ Private DDNS is available for use with a specific DDNS server and client software.

【NTP】 ON/OFF NTP. Network Time Protocol – allows the DVR to sync with a time server automatically.
✓ Host IP: input IP of NTP server
✓ Port: this SNTP support TCP only, the default port is 123.
✓ Update cycle: time interval between 1 min and 65535 min.

【IP Authority】 DVR authority management, if you enable the white list, only the DVR in IP list is allowed to connect. This system supports a max of 64 IP addresses.

【Multicast, Port】
【Network Through Capacity】
【On-line User】 Range: 0-10, 0 indicates that no connections are allowed.
【Network Transmission QoS】 Fluency, resolution or automatic adjustment. The automatic setting adjusts these settings based on available network resources.
【Speedy online download】 If enabled, this allows higher priority for downloading a playback clip against viewing live cameras, at the same time.

【Port】
【HTTP】 default: 80
【TCP】 default: 37777, variable
【UDP】 default: 37778, variable
【Multicast】 Tick ‘Multicast’ and set a group in ‘Set’
【Email】 Set SMTP server IP, port, username, password and sending interval.
The email subject is alphanumeric; the limitation is a maximum of 32 characters. Emails can be sent to up to 3 receivers. SSL is supported also.

The email sending interval is between 0-3600 seconds. This interval is a threshold to prevent an abusive amount of emails from being sent.

[FTP]: Tick “FTP” and click “Set”
- Set FTP server IP address, port and destination folder. System will create folders by IP, time and channel if there is no remote folder specified.
- FTP username and password
- Set a maximum file size, channel, time, type and etc.
- Set FTP file length. Upload the whole record if the file length is smaller than setting; leave out the exceed part if the file length is exceed the setting; 0 refers to uploading the entire record in any condition.
- Set up to two time periods and choose from 3 different record types for channels.

【Alarm Center】 Reserved interface

- Network status
  Display the current network and IP.

5.7.4 ALARM CONFIGURATION

- Local alarm
  Local Alarm interface:

  ![Local Alarm Interface]

  - [Alarm Input Channel No.]: Select the alarm input channel
  - [Enable]: The specified alarm in /out
  - [Type]: Select the alarm circuit type.
  - [Copy]: Copy the configuration to another channel
  - [Process Mode]: Enter alarm linkage interface:
【Period】: Sets the alarm active period

【Linkage】: ON/OFF 【Record Channel】 , 【PTZ】 , 【Tour】 , 【Snapshot】 linkage and select channel.

【Abnormity】: Enable or disable 【Alarm Out】 , 【Show Message】 , 【Send Email】
5.7.5 USER MANAGEMENT

Note:
- Group and user names can be from 1-6 characters in length. Valid characters include letter, numbers, and symbols. You may not use a space as a leading or ending character.
- There is no limit to the number of groups or users. By default there are two different group levels: admin and user.
- User management determined upon two levels: the group and the user level. Group and user names cannot be duplicated, and each user can only belong to one group.

Use Management interface:

【Add uses】: Add group member information and set authorities.
- Default users are: “admin”, “user” and hidden “default”, the password of first two username is 123456. “Admin” has advanced authorities; “user” only has surveillance and playback authority.
- Hidden default: operate in password-less login mode.
- Enter【Add uses】; Input username, password and select group and reusable options. Reusable allows the account to be used by multiple logins.
- Users can only belong to one group. User rights cannot exceed group rights.

【Modify users】: Modify existing group member information and authority.

【Add group】: Add group and set group authorities
- Set a group and authorize 60 items including control panel, shut down, live view, playback, record, record backup, PTZ control, account, system information, alarm in /out setting, system configuration, search log, log delete, upgrade, operation authority, etc.

【Modify group】: Modify existing group information.

【Password modification】: Change password
- Select a user name, and input the previous password and new password twice.
- Click【Save】to confirm
- Password can be in 1-6 numbers, letters or symbol; blank in beginning and end is invalid.
- The account with management authority could change others' password.
5.7.6 EXCEPTIONS SETUP

Abnormality interface:

- **[No Disk]** Alarm when the hard disk is not present or can not be detected. **Process Mode** includes: **Alarm Output**, **Display On Screen** and **Send Email**.

- **[Disk No Space]** Alarm when hard disk capacity is lower than setting. **Process Mode** is same as **No Disk**’s **Process Mode**

- **[Net Disconnection]** Alarm when network is not connected. **Process Mode** includes **Alarm Output**, **Display On Screen** and **Send Email** and recording linkage.

- **[IP Conflicted!]** Alarm when IP address conflict. **Process Mode** is same as **No Disk**’s **Process Mode**

- **[Disk Error]** Alarm when there is error in reading and writing hard disk. **Process Mode** is same as **No Disk**’s **Process Mode**
5.8 STORAGE

5.8.1 HDD MANAGEMENT

Maintain and manage local HDD

- **Standard**

![HDD Management Screen](image)

"Base Config" shows DVR storage capacity, available space and working status.

【Format】: It is possible to format an individual HDD.

**Note: Hard disk format operation result in the loss of video data**

【Set】: To set HDD as read-write, read only or redundancy mode. In read only mode, video data cannot be covered.

- **Record**

![HDD Management Screen](image)

“Record” shows the video start and end time.
5.8.2 RECORD BACKUP

Connect an External USB device with the USB port to backup in the "Record Backup" menu.

【Detect】: Identify external USB device and display the device information
【Backup】: Tick the external device and click 【Backup】 to enter the backup menu.

- Backup operation
Select the record start and end time and click 【Add】 to add in list; duplicate it by inputting the start and end time again; click 【Delete】 to clear the files list. Tick the record you want and click 【Start】 to backup and display time remaining.
【Delete】 Delete all data in USB backup device

Note: This operation probably cause permanent data loss
5.9 UTILITIES

5.9.1 PTZ CONFIGURATION

Set PTZ channel, protocol, address, baud rate, etc. Firstly, set the dome address and ensure the A, B lines of dome and DVR are connected correctly. The configuration interface:

- **Channel**: Select the channel for PTZ camera
- **Protocol**: Select associated dome protocol (e.g. PELCOD)
- **Address**: Select associated dome address, default: 1 (Note: this address has to correspond with dome address, or the dome will not control.)
- **Baudrate**: Select the dome baud rate and control, default is 9600. Note: the baud rate has to correspond with the dome address, or the dome will not control).
- **Data Bits** Default: 8
- **Stop Bits** Default: 1
- **Parity** Default: None
5.9.2 ALARM OUTPUT

This menu manages alarm output parameters and displays the current state of alarms.

- **Channel** Alarm port
- **Auto** Alarm output is determined by the alarm output menu, while in auto mode.
- **Manual** Alarm output is on and the status is active.
- **Close** Alarm output is off and the status is inactive.
- **Status** Current status of alarm output

![ALARM OUTPUT Menu]

5.9.3 PORT CONFIGURATION

**Port Config** interface:

- **Function**: Consol
- **Baudrate**: 115200
- **Data Bits**: 8
- **Stop Bits**: 1
- **Parity**: None

- **Port Function** Adjust protocol
  - General port: upgrade and debug by port and software;
  - Keyboard: keyboard connected by port;
  - Bypassed port: connect with PC to bypass parameters;
Net keyboard: keyboard connected by net port;
PTZ matrix: control PTZ matrix

Note: Certain models are without an RS-232 port, please see 7.4 Specifications.

- Baud Rate: Set baud rate.
- Data Bit: Default: 8
- Stop Bit: Default: 1
- Confirm: Default is no

5.9.4 OUTPUT

- Menu configuration

![Display Menu](image.png)

- Channel Name: To modify channel name, available options are symbols, letters, and numbers.
- Time Display: To choose whether time displays on screen
- Channel Display: To choose whether channel name displays on screen
- Overlaying: To choose whether overlaying information displays on screen
• Output configuration

【VGA Output】: To select VGA resolution and refresh rate, default is 1024×768@60Hz.
【TV Adjust】: To adjust TV output area. Modify the image to the right size for monitor.

• Tour configuration

Setting tour mode and interval between rotation, the time is within 5-120s, the mode include single screen, four-, eight-, nine-, sixteen-screen.

【Motion Tour Type】: To set the motion detection tour mode
【Alarm Tour Type】: To set the alarm tour mode

Note:
Shortcut: Switch  by clicking the upper right button or pressing “Shift” key. ( enable tour, disable tour)

5.10 MAINTENANCE

【Log】Display system log information.
Log type: System operation; configuration; data management; alarm event; recording; user management; log delete; document operation. Select the type and time to filter the log list. Backup logs by clicking “backup” or clicking “delete” to delete all logs.

【Version】: Shows features, software version and other information
Software upgrade: connect a USB flash device which contains the upgrade firmware and click “Upgrade”.

Note: Improper upgrades may cause the startup failure. Please operate under professional direction.

【Default】: Restore (items are selectable)

Note: Menu transparency, language, time format, video format, IP, user ID, etc are not restored.

【BPS】show data rate of each channel by wave form.

Note: This is estimated value, for reference only.

【Auto Maintain】Set auto maintenance items.
【On-line Users】Check the current online users status.
5.11 SHUTDOWN

【Menu Logout】Log out of the current user account
【Shutdown】Shutdown the DVR
【Restart System】Reboot the DVR
6 ON-LINE OPERATION

6.1 WEB OPERATION GUIDE

6.1.1 NETWORK CONNECTION

- Check network connection by LCD on front panel, “” refers connection error.
- Set IP, subnet mask and gateway for computer and DVR. The detail of DVR network configuration please see 【Settings】 → 【Network Setting】
- Ensure the IP is correct and check whether the DVR is on the network by using the Windows command “ping”.

6.1.2 CONTROL SETUP & LOG IN / LOG OFF

- You are able to access the DVR by Internet Explorer, assuming you have a correct network configuration.
- You will see the following interface popup when you access the IP address in Internet Explorer.

- Install ActiveX. If installation is blocked by Windows, please add the IP as a trusted site or lower your Internet Explorer security settings to allow this.
- The following interface will popup when you input your username, password and click “Login”.
- Click “Exit” to quit.
<table>

</tbody>
</table>
6.1.3 LIVE VIEW

- Select a live view channel in surveillance window
- Top left (1 area in next diagram) shows DVR IP address and stream.
- Left bottom (2 area in next diagram) shows the channel name.
- Top right (3 area in next diagram) shows the date and time.
- Click " " (4 area in next diagram) to switch between single screen and multi-screen.
- " " (5 area in next diagram) refers to multi-screen switch, local record, capture and mute/cancel mute audio.
  - Multi-screen switch: switch from single screen to multi-screen and vice versa.
  - Local record: save and record video to a local HDD while in a live view. Set recording path in configuration.
  - Capture: capture of the present channel, set the path in "other".
  - Sound: on/off sound.

6.1.4 PTZ CONTROL

- Set protocol (see 【Setting】 → 【PTZ Config】)
- Control PTZ direction, step size, zoom, IRIS, preset, tour, pattern, border scan, light, wiper, auto pan, etc.
- Step size controls PTZ speed, e.g. step size 8 is moved faster than step size 1.
- Eight direction rotations: up, down, right, left, upleft, upright, lower left, lower right.

- Border scan:
  Operation: move camera to the left/right boundary by direction key. Click border again to confirm the setting.
- Preset:
  Operation: modify preset position by direction key and inputting a preset number, then click “Add” to save.
- Tour:
  Operation: select “Tour”; and input numbers in “Path” and “preset”. Click 【Add Preset】 to add one preset in the cruise path, and repeat to add additional presets. Click 【Clear Preset】 to delete a preset, repeat to delete more.
- Pattern:
  Operation: Click “Pattern” in order to record a automated pattern. Then, go back to the PTZ controls in order to modify the zoom, focus and IRIS, etc. Stop recording in “Pattern” setting to save the pattern.
- AUX: on/off one of AUX
- Wiper: on/off wiper under protocol

6.1.5 SYSTEM SETTING

Call up the DVR local configuration menu by click “System Setting”, the further details please refer 【Local operation guide】.
6.1.6 SEARCH RECORD

Click “Search record” to open the search interface.

- Search record: parameters (start and end time, channel number). Then, click ‘Search’ in order to display the results.
- Play: double click a search result to play in video window. Control the playing video by the control keys on the bottom.
• Download: select a searched video to download to local. The download speed and percentage are displayed on the bottom of the screen.

6.2 CLIENT OPERATION GUIDE

See 《IMS1000 User Manual》

7 APPENDIX

7.1 HDD CAPACITY CALCULATION

• HDD capacity
There is no capacity limitation for each HDD, please select HDD according to your actual recording requirement.

• Formulas
Formula for total HDD capacity:

\[
\text{Total HDD Capacity (MB)} = \text{Channel Number} \times \text{Time (Hour)} \times \text{HDD Occupation Per Hour (MB/hr)}
\]

Formula for record period:

\[
\text{Record Period (Hour)} = \frac{\text{Total HDD Capacity (MB)}}{\text{HDD Occupation Per Hour (MB/hr)} \times \text{Channel Number}}
\]

Simulation for file size (CBR)

</table>

The file size is different in VBR mode; the above data is only for reference.
7.2 REMOTE CONTROL OPERATION

7.3 MOUSE CONTROL

Connect a mouse and DVR by the USB ports.

- **Left Click**
  - Pops up the login box if you are not logged in. If you are logged in, a left click brings up the main menu.
  - Click an icon to entry its submenu
  - Execute an operation
  - Select a check box, modify MD state
  - Pop up drop-down list
  - Select input method and input test. ← refers backspace, _ refers blank

  **English input:**

  ![Alphabet Input](image)

  **Number input:**

  ![Numeral Input](image)

  **Symbol input:**

  ![Symbol Input](image)

- **Double left-click mouse**
  - Select and play a record.
  - In live view, switch channel to a full screen.
  - Return back to a previous multi-view by double clicking again.

- **Right Click mouse**
  - Pop up the context menu in live view mode
  - Return to the previous menu / cancel the operation.

- **Scroll wheel**
  - Change numeric fields up/down
Select options from a pull down menu.

Scroll page up/down in a list box

- Left click and Drag mouse
  - Left click and drag to select a motion detection area.
  - Left click and drag to select a masked area

### 7.4 TROUBLESHOOTING

- **DVR startup failure or continuously reboot**
  Possible reasons:
  1. The system has been damaged from a bad DVR update.
  2. There is a problem with the DVR main board error, please contact the supplier.
  3. There is an HDD error. Replace the faulty HDD.

- **Remote control does not work**
  Possible reasons:
  1. Check for batteries in the remote control
  2. The batteries are dead.
  3. The IR receiver / transmitter is not aligned.
  4. The DVR address and does not correspond to the remote control address. Please check your settings in the “General” menu, and press the RC key to pair the device.

- **DVR cannot control PTZ**
  Possible reasons:
  1. RS-485 cable connection error, A, B ports are inversely connected. A is RS-485+, B is RS-485-
  2. PTZ decoder, protocol, baud rate, address are incorrect.
  3. Parallel connect a 120Ω resistance to resolve signal reflex issues caused by too many PTZs on the line.
  4. The RS-485 port on DVR is defective

- **Blurred screen in preview mode**
  Possible reasons:
  Please make sure your cameras match your video format selected in the General menu. E.g. camera is NTSC standard but the DVR is a PAL standard, the preview would be blurred.

- **Blurred screen in playback mode or failure to playback records**
  Possible reasons:
  1. Procedure error, reboot the DVR
  2. HDD error, test or change out the HDD
  3. DVR hardware failure, contact your local supplier

- **Client software cannot view DVR live image**
  Possible reasons:
  1. Network settings are incorrect
  2. IP conflict

- **Download recording can not be played**
  Possible reasons:
  1. No video player is installed. Please download the latest video player online.
  2. The USB or HDD device itself has an error
  3. Do not install graphic software later than DX8.1
