

SF-TESTER8-5N1-4K

INSTRUCTION MANUAL

- Thank you for purchasing the IP camera tester. Please read the manual before using the IP camera tester and use properly.
- For using the IP camera tester safely, please first read the [Safety Information] carefully in the manual.
- The manual should be kept well in case of reference.
- Keep the S/N label for after-sale service within warranty period. Product without S/N label will be charged for repair service.
- If there is any question or problem while using the IP camera tester, or damages occurred on the product, please contact our technical Department.

1.Safety information

- The tester is intended to use in compliance with the local rules of the electrical usage and avoid to apply at the places which are inapplicable for the use of electrics such as hospital, gas station etc.
- To prevent the functional decline or failure, the product should not be sprinkled or damped.
- The exposed part of the tester should not be touched by the dust and liquid.
- During transportation and use, it is highly recommended to avoid the violent collision and vibration of the tester, lest damaging components and causing failure.
- ◆Don't leave the tester alone while charging and recharging. If the battery is found severely hot, the tester should be powered off from the electric source at once. The tester should not be charged over 8 hours.
- Don't use the tester where the humidity is high. Once the tester is damp, power off immediately and move away other connected cables.
- The tester should not be used in the environment with the flammable gas.
- Do not disassemble the instrument since no component inside can be repaired by the user. If the disassembly is necessary indeed, please contact with the technician of our company.
- The instrument should not be used under the environment with strong electromagnetic interference.
- Don't touch the tester with wet hands or waterish things.
- Don't use the detergent to clean and the dry cloth is suggested to use. If the dirt is not easy to remove, the soft cloth with water or neutral detergent can be used. But the cloth should be tweaked sufficiently.

About Digital Multi-meter

- ◆ Before using, you must select the right input jack, function and range.
- ◆ Never exceed the protection limit values indicated in specifications for each range of measurement.
- When the tester is linked to a measurement circuit, do not touch unused terminals.
- ◆Do not measure voltage if the voltage on the terminals exceeds 660V above earth ground.
- ◆At the manual range, when the value scale to be measured is unknown beforehand, set the range selector at the highest position.
- ◆Always be careful when working with voltages above 60V DC or 40V AC, keep fingers behind the probe barriers while measuring.

- Never connect the meter with any voltage source while the function switch is in the current, resistance, capacitance, diode, continuity, otherwise it will damage the meter.
- Never perform capacitance measurements unless the capacitor to be measured has been discharged fully.
- ◆Never measure any of resistance, capacitance, diode or continuity measurements on live circuits.

Visual laser sources

When you turn on visual laser sources, please don't stare at it, or will damage to eyes When not using it, please turn it off and cover the protective cap.

2. IP Camera Tester Introduction

2.1 General

The 8 inch touch screen IP camera monitor is designed for maintenance and installation of IP cameras, analog cameras, TVI, CVI, AHD, SDI/EX-SDI cameras, as well as testing 4K H.264 /4K H.265 camera by mainstream, The 2048x1536 resolution enables it to display network HD cameras and analog cameras in high resolution. The unit supports many ONVIF PTZ and analog PTZ control. The combination of touch screen and key buttons make the IP camera tester very user- friendly.

The tester is also a great tool for Ethernet network testing. It can test PoE power voltage, PING, and IP address searching. You can use the blue cable tracer to locate individual connected cables from a bundle of cables. Test LAN cable for proper connection termination. Other functions include providing 24W PoE power to your camera, HDMI IN and out, CVBS loop test, testing IP and analog at the same time, LED Flashlight, DC12V 3A power output and much more. Its portability, user-friendly design and many other functions make the IP tester an essential tool for all installers or technicians.

2.2 Packing list

1). Tester

- 2). Adaptor DC12V 2A
- 3). Network cable tester
- 4). Polymer lithium ion battery (7.4V DC 7000mAh)
- 5). BNC cable
- 6). RS485 cable
- 7). SC,ST connector (Only for optical power meter)
- 8). Multi-meter test leads one pair of red and black (only for the Multi-meter models)
- 9). Output Power cable
- 10). Audio cable
- 11). TDR alligator clamp (only for TDR models)
- 12). Safety cord
- 13). Tool bag
- 14). Manual
- 15).8GB SD card

2.3 Function interface

1	0	Press more than 2 seconds, turn on or off the device ,short press to turn on or off the menu display			
2		Menu key, press it to call shortcut- menu			
3	Ł	Confirm key			
4	G	Return/Close : Return or cancel while setting parameters of the menu, close or decrease the aperture			
5		Multimeter interface (Optional)			
6	6 The charge indicator: it lights red while the battery is being char				
7		The RS485 data transmission indicator: it lights red while the data is being transmitted			

- 19 EX/HD-SDI input (BNC interface) (Optional)
- 20 TDR cable test interface (Optional)
- 21 RS485 Interface: RS485 communication for the PTZ
- 22 Power battery switch
- 23 DC 12V 2A charging interface
- 24 USB 5V 2A power output (used only for power, not data)
- 25 Audio input
- 26 Audio output and earphone interface
- 27 UTP cable port: UTP cable tester port/ Cable tracer port
- 28 Anti-sunlight board
- 29 Micro SD card moveable,(comes with 8GB, supports up to 32GB)
- 30 HDMI output interface

3. Operation

3.1 Installing the Battery

The battery main switch at the right-bottom corner of tester bottom.

"0": Battery power off

"1": Battery power on

The tester has built-in lithium ion polymer rechargeable battery, the tester's bottom power should turn to "0" for safety during transportation (the factory default is "0") Using the instrument, pls switch power button to "1", press the U several seconds can turn on/off tester. In general, user no need to turn on battery switch.if don't use the instrument in long time, pls turn

off the switch.

Notice: Pls use the original adaptor and connected cable of the device!

When the battery icon is full or the charge indicator turns off automatically, indicate the battery charging is completed

Notice: When the Charge Indicator 💷 turns off, the battery is approximately 90%

charged. The charging time can be extended for about 1 hour and the charging time within 12 hours will not damage the battery.

several seconds to restore the default settings when the

instrument works abnormally.

Multi-meter: The red and black multi-meter pen must insert the corresponding port.

Warnings: Instrument communication port is not permitted access circuit voltage over 6V, otherwise damage the tester.

Warnings: Not allow insert multi-meter pen in the current terminal to measure voltage.

3.2 Instrument connection

3.2.1 IP camera connection

Power an IP camera with an independent power supply, then connect the IP camera to the IPC tester's LAN port, if the link indicator of the tester's LAN port is green and the data indicator flickers, it means the IP camera and the IPC tester are communicating. If the two indicators don't flicker, check if the IP camera is powered on or the network cable is not functioning properly.

Note:1) If the IP camera requires PoE power, then connect the IP camera to the IP tester's LAN port. The tester will supply PoE Power for the IP camera. Click on the icon labeled POE to turn the PoE Power off or on.

2) If use the tester's menu to turn off the tester's PoE power supply, the PoE switch and the power sourcing equipment are allowed to connect to the tester's PSE port, and the PoE power will be supplied to the IP camera by the tester's LAN port. On this condition, the tester cannot receive data from IP camera, but the computer connected to the PoE switch can receive the data via the the tester.

Warning: PoE switch or PSE power sourcing equipment only can be connected to tester "PSE

IN" port, otherwise will damage the tester.

3.2.2 Analog camera connection

(1)) Connect the camera's video output to the IP tester's VIDEO IN. The image will display on the tester after pushing the PTZ icon.

(2) CCTV IP Tester "VIDEO OUT" interface connect to the Video input of monitor and optical video transmitter and receiver, the image display on the tester and monitor.

(3) Connect the camera or the speed dome RS485 controller cable to the tester RS485 interface (Note: positive and negative connection of the cable).

3.2.3 HD Coaxial camera connection

* SDI/EX-SDI, CVI, TVI, AHD camera are classified as HD coaxial cameras. Hereby the following instruction of how to connect SDI camera to the tester is also applied to CVI, TVI and AHD cameras.

 (1) Connect the SDI camera's video output to the IP tester's "SDI IN" interface, the image will display on the tester. The tester only come with SDI input interface. There is no SDI output interface.
 (2) Connect the SDI camera or the speed dome RS485 controller cable to the tester RS485 interface (Note: positive and negative connection of the cable).

3.2.4 HDMI IN

DVR or other device's HDMI out port connect to tester's HDMI in port, the meter will display input image.

3.3 OSD menu

Press the key 2 seconds to turn on Press the key 2 again to turn off short press the key 1 to enter sleep mode, press it again to test. If tester works abnormally and cannot be turned off, Press the key 1 the tester reset.

several seconds to turn off,

3.3.1 Lite mode & Normal mode

- CCTV CCTV CCTV CVBS & HD Camera CVBS & HD Camera CVBS & HD Camera CDB & Tools Marual Luptare Luntare Luptare Luptare
- Lite mode: You can easy find corresponding apps

In Lite mode, click the finger icon in the lower right corner till to yellow, long press the icon to move the function icon to other items. Do not click the finger icon and long press the application icon, can move the icon in folder.

Click the bottom left corner" U . can open Flie expoler, Setting and Theme functions.

Click SD card, install or remove SD card.

3.3.2 Drop-down Menu

Press and slide at right top right corner twice to open shortcut menu. The shortcut menu includes POE power output, IP settings, Wi-Fi, HDMI IN, CVBS, Video OUT, LAN, Brightness, settings etc.

HDMI: Click HDMI IN to enter, in HDMI IN mode, it can converter test from analog to digital with dual test window IP & HDMI IN or Analog & HDMI in

CVBS: Click icon "CVBS" to enter, you can test IP and analog camera at the same time

Video OUT: Click "Video OUT" to enter floating window, connecting the BNC cable to tester and appears analog video monitor interface, it can test circuit and BNC cable whether normal.

LAN: Display network port or WIFI connection real-time upload and download speeds and other network parameters.

Brightness: Set brightness

Settings: Enter settings interface.

IP: Enter IP Settings interface.

POE power output: Turn on or off the tester "PoE power" app

WLAN: Turn on WLAN net and displays current WLAN status.

3.3.3 Short cut menu

You can call shortcut menu by press tester's "menu" key, you can self-define shortcut menu.

Short cut-menu setting, you can long press any app in the all applications list, it will auto move to shortcut menu. If delete any app in the shortcut menu, please select a app and press several seconds, it will be deleted.

3.3.4 Screen capture

Long press the key "enter", can capture screen interface and save it in any time.

You can go file management to view "File management - SDcard - Pictures - Screenshots".

3.3.5 TesterPlay

Mobile screen projection (Only for android version)

The meter creates WIFI hotspot, connect mobile phone to the tester's WIFI hotspot, or the tester and mobile phone connect to the same Wi-fi network. Tap icon " ()", then select "TesterPlay" app to enter, click "Start" button to generates two-dimensional code, Please use mobile phone Input Rtsp., then you can view the screen real-time projection, the mobile phone need to install "Testerplay App" first.

PC screen projection:

Install VLC player in the PC, turn on the VLC player "Media - Open Network Streaming", and input the RTSP address of on the top instrument two-dimensional code, click "play" to view the screen real-time projection. (you also can install "VLC player" in the mobile phone, tester and mobile phone display at the same time)

3.3.6 Built-in Keyboard

As ONVIF/IPC TEST/CVI/AHD/HDMI Input apps, slide screen from right to left, to call the keyboard, can zoom/Tele+/Tele- image and PTZ control.

Rapid video

enter function, One key to detect all network cameras and auto play the images.

Auto log in and display camera image. Detailed operation refer to ONVIF function.

After exit ONVIF app, Click Refresh to search IP address.

3.3.7 IP discovery

Press IP discovery , tester auto-scan the whole network segment IP, as well as auto-modify the

Local IP: Tester's IP address, Tester can auto-modify the tester's IP to the same network segment with the scanned camera's IP.

Discovery IP: Connected tester equipment's IP address. If the camera connected to the tester directly, tester will display the camera's IP address, if tester connects to Local Area Network, it displays the current IP address.

Temp IIP: After searching IP address, the modified tester's IP address will not be saved, if you do not select "Temp IP", the tester's IP address will auto-save after searching.

Start: PING function, Click "Start", can PING camera's IP.

Rapid ONVIF: Rapid ONVIF Quick link

IPC TEST: IPC TEST Quick link

Applicability: Using IP discovery app, you don't need to know the first two digits of camera's IP address, it can auto-scan the whole network segment IP, and auto-modify tester's IP address, greatly improved engineering efficiency.

3.3.8 Rapid ONVIF test

Rapid ONVIF can display 4K H.265/H.264 camera image by tester mainstream, one key to activate

Hikvision camera.

Press enter ONVIF function, the meter auto scan all ONVIF cameras in different network segments. It lists cameras name and IP address on the Left of screen. Tester can auto login camera and display camera image. Factory default use admin password to auto login, if you modified the password, then default use the modified password to log in.

If you select ONVIF Rapid mode, the meter automatically scan different network segments for ONVIF

cameras. It lists the camera name and IP address on the Device List. Tester can auto login camera and display camera image.

setting							

Image setting: Click "Imaging Set" to adjust image brightness, saturation, contrast, sharpness and backlight compensation mode.

Profiles: Click "profiles", can view video streaming current configuration files, as well as switch between Major stream and minor stream.

Preview pictures: Quickly preview and zoom in or out pictures, automatically and manual refresh.

Identification: Click "Identification" to view information of the camera.

Time set: Click "Time set", Select "Manual set" to set up the time of camera.

Maintenance: For camera software reset or restore to factory settings.

User Set: Modify camera user name, password etc parameters.

Network setting: Click "Network Set" to change the IP address. Some cameras cannot support change IP address, so there is no change after saving.

When the image is enlarged, if not operate on touch screen, it can operate by the keyboard, press the key (TEE+) to zoom in , press the key (MDE-) to zoom out , press upward and downward key to move image.

If it is network video input to the tester, as the tester supports resolution up to 1080p, the input image will be very clear after it is enlarged. This is greatly helpful for the installers to ensure the IP camera's video coverage and decide the IP camera's install site.

Image can only be enlarged on SD mode (The icon "ONVIF" is SD mode.)

Select relative function on the bottom Toolbar to operate, "Snapshot", "Record", "Photos", "Video playback", "Storage set", "PTZ control" etc.

Snapshot: Click bottom "snapshot" to screenshot the image and store it to SD card.

if select manual storage, appears dialog box "Input Name", user-defined the files name(by Chinese character, English letter or digit) to save in SD card, if select "Auto- storage", the tester auto stores the files after snapshot.

Record: When you click **bottom** the "Record" icon, video starts recording. A red recording icon appears on the screen and begins to flash and a timer appears indicating the time elapsed for the video. Click on the "Stop" icon to stop recording and save the video file to the SD card.

Playback: Click the "Playback" icon to view saved videos. Double click the video you want to play. Click to return to the last menu.

To rename or delete a photo, click and hold on the file until this screen appears:

Video files can play in the Video player on the main menu.

PTZ

Set preset position: Move the camera to preset position, enter the preset number on the Bottom right corner to complete position preset.

IPC Port :	5198	
Enter	Reset Restore	Rate

Local IP: This is the tester's IP address. Click "Edit" to enter "IP setting" and change the tester's IP address settings.

IP camera type: Click on the IP Camera type to select the Manufacturer and model number of the integrated IP camera.

"Manual": Click IP camera type, list Honeywell, Kodak, Tiandy, Aipu-waton, ACTi, WoshiDA IP camera etc. If the brand has offered official original protocols, pls select camera type, input IP camera address, user name and password, click "official" to enter the camera image display interface(Currently, only support DAHUA official protocols).

Stream code: When test camera via RTSP, you can select mainstream or sub stream to test (if camera's RTSP have not been start or without, it will tip "auto match" fail, please witch to manually selecting.

i Please select stream :		
Major stream(2560x1440H264) Minor stream1(352x288H264)		
Cancel		

IP Camera's IP: Enter the IP camera's IP address manually or click "Search" to auto-scan for the IP camera's IP address. It is better to directly connect the IP camera to the tester so the search results will only display the camera's IP address. If the tester is connected to a PoE switch, it will find and display several IP address.

IPC User Name: Enter IP camera's user name.

IPC Password: Enter IP camera's login password.

IPC Port: When you select the IP camera type, it will default the camera's port number and doesn't need to be changed.

After all settings are completed, click "Enter" to view the live video.

If IP address setting has error or IP camera is not connected.. The tester prompts "Network Error". Click it o quit from image display and return to IP camera test interface.

Once you are viewing video on the IPC Test app, you will see the "Video Menu" icon on the top right. This button will give you access to Snapshot, Record, Photo, Playback, PTZ, and Set. Please refer to the ONVIF section to use these functions.

3.3.10 HDMI IN

HDMI in HD signal test, Tap icon " 🦳 " to enter

When tester receives HDMI in image, the top tool bar shows the resolution of this image. You can select "resolution" to set resolution in the setting menu. Tap screen by twice, full image display. Support resolution below

 $720 \times 480p \ / 720 \times 576p \ / 1280 \times 720p \ / 1920 \times 1080p \ / 1024 \times 768p \ / 1280 \times 1024p \ / 1280 \times 900p \ / 1440 \times 900p \ / 1040 \times 900p$

(1) Snapshot

Click the icon "Snapshot", when the video in, to take a picture and save the current video frame in the SD card as JPEG file.

If the unit is set to the manual mode an "Input Name" pop up box will appear and you can enter a title for the snapshot. If the unit is set up to automatically set file names, this box will not pop up.

(2) Video record

When you click the "Record" icon, video starts recording. A red recording icon appears on the screen and begins to flash and a timer appears indicating the time elapsed for the video. Click on the "Record" icon again to stop recording and save the video file to the SD card.

If select manual storage, before recording begins, appears dialog box "Input Name", user-defined the files name(by Chinese character, English letter or digit) to store in SD card, tester will hereby store the files in SD card after recording. if select Auto-storage, tester will auto store the files in SD card after recording.

(3)Photo

Click the icon "photo" to enter, click the selected thumbnail photo to display it on the screen.

Double-tap the image can view full screen. Double-click again the photo to return.

To rename or delete an image, click and hold on the file until this screen below appears

Click it to close and return to PTZ controller.

(4) Recorded video playback

Click the "Playback" icon to view your recorded videos. Tap on the video file image you want to watch.

💽 Video player	a 🖉 🖹 07:33 🔀
/mnt/internal_sd/video/lk.mp4	
Mint/internal_sd/video/op.mp4	

To rename or delete a video, click and hold on the file until this screen appears:

() Vid	eo player	a 🐼 🗎 07:33 🔀
۲		
۲	/mnt/internal_sd/video/op.mp4	
		<u></u>
		Rename
		Delete

Video files also can play in the main menu "Video Player".

3.3.11 Video monitor test

Analog camera test and PTZ control, click icon

Display the input video image, click the top menu bar icon

(PEAK level, SYNC level, COLOR BURST measurement)

Select relative function on the right side Toolbar to operate , functions including "Photos", "Snapshot" ,

to enter video level meter

"Record", "Playback", "PTZ", "Set",

Click or press (MENU to quit.

Click the screen twice quickly, can be full zoom in on the touch screen.

(1) PTZ controller parameter setting

Select and click icon "PTZ" to enter PTZ setting:

CVBS		URI READU		PA	L 🗎 🧖	10:11	AM.
1	16-2351	1	100				
140	Protocols:	<u>a</u> [Pelco D				
1	Port	4	R\$485				
11	Baud Rate:		2400				
	Address:						00
	Tilt speed:		40				
	Tilt speed:	4	40	\triangleright			
	Set Position:						
	Call Position:	4	8				
	ОК		Canc	el			
		1.3-2					

A. Protocol

Use the up and down arrow keys to move the yellow cursor to the "protocol", set corresponding

Protocol and support more than thirty PTZ protocols. Such as

Pelco-D,Samsung,Yaan,LiLin,CSR600,Panasonic,Sony-EVI etc.

B. Port

Click and move, to "port" Select the communication port for the PTZ camera controlling (RS485)

C. Baud

Move the yellow cursor to "Baud", Select the baud rate according to baud rate of the PTZ

camera.(150/300/600/1200/2400/4800/9600/19200/57600/115200)

D. Address

Set the ID according the ID of PTZ camera (0~254), the setting address data must be consistent the speed dome address.

E. Pan speed: Set the pan speed of PTZ camera (0~63)

F. Tilt speed: Set the tilt speed of PTZ camera (0~63)

G. Set preset position (Set PS)

Click and select "Set PS", set and save preset position number(1~128).

H. Call the preset position (Go ps)

Click and select "Set PS", set and save preset position number (1~128), click "sure" to save,

Call some special preset number, can call the dome camera menu.

Check and set the protocols, address, interface and baud, all must be consistent with the dome camera, then the IPC tester can test .After setting the parameter, the tester can control the PTZ and lens. To control PTZ by screen touch:

Tap left, right, upward and downward on the touch screen to control the PTZ rotation direction. By two fingers move outward and inward on the touch screen to zoom in and out the PTZ.

(2) Video and storage setting

Click icon "set" to enter and set analog video image brightness, contrast, color saturation, as well as the

file storage way after snapshot and recording, support auto-storage and manual storage.

When select manual storage, user can name and store the files.

CVBS	U.S. Santa State		PAL	i 🥺 🗋 10:1	2 AM 🗙
12		- J			Photo
		1		103	Snapshot
Brightnes	•	- +	5	100	
Contrast: -	•	+	50	1.1	Record
Saturation: -	-	+		100	Þ
Photo Storage:		Auto		6.00	Playback
Video Storage:		Auto		1.11	ात भार
ОК	Restor	Cance		100	Set .

(3) 4 x zoom image display and Video out

When image input, press (①) to enter "zoom", press it again to quit.

Using the touch screen to control PTZ camera movement:

Tap left, right, upward or downward on the video image to move the PTZ camera in a desired direction.

Stretch two fingers outward or inward on the touch screen to zoom the image in or out.

If not use touch screen to operate, press the key (TELE+ to zoom out, press the key WIDE-) to zoom in, press upward and downward key to move the image.

For analog video input, as the resolution is 720*480, it is normal that the zoom in image is not clear. But for network digital video input, as it supports resolution up to 1280*960, the zoom in image

is still very clear. This is very helpful for IP camera installation.

(4) Snapshot

Click the icon "Snapshot", when the video in, to take a picture and save the current video frame in the SD card as JPEG file.

If the unit is set to the manual mode an "Input Name" pop up box will appear and you can enter a title for the snapshot. If the unit is set up to automatically set file names, this box will not pop up.

(5) Video record

When you click the "Record" icon, video starts recording. A red recording icon appears on the screen and begins to flash and a timer appears indicating the time elapsed for the video. Click on the "Record" icon again to stop recording and save the video file to the SD card.

If select manual storage, before recording begins ,appears dialog box "Input Name", user-defined the files name(by Chinese character, English letter or digit) to store in SD card, tester will hereby store the files in SD card after recording. if select "Auto-storage", tester will auto store the files in SD card after recording.

(6)Photo

Click the icon "photo" to enter, click the selected thumbnail photo to display it on the screen.

Double-tap the image you want to view to make it full screen. Double-click again the photo to return.

To rename or delete an image, click and hold on the file until this screen below appears

Click to close and return to PTZ controller.

(7) Recorded video playback

Click the "Playback" icon to view your recorded videos. Tap on the video file image you want to watch.

To rename or delete a video, click and hold on the file until this screen appears:

Video files also can play in the main menu "Video Player".

(8) Video level meter

Click the icon to enter, the IP camera tester has adopted hardware high-speed sampling and processing technology, can perform both NTSC and PAL video amplitude signal measurements for PEAK to PEAK, SYNC levels and COLOR BURST chroma level. When an analog signal is fed into the meter, the tester displays the measurements on the bottom left corner of the screen

While in PAL format, the unit will be mV, While in NTSC format, it will be IRE.

	Video signal level	140±15IRE	
NTSC	Chroma level(COLOR BURST)	40±5IRE	
	SYNC signal level	40±5IRE	
PAL	Video signal level	1000±200mV	
	Chroma level(COLOR BURST)	300±35mV	
	SYNC signal level	300±35mV	

Video signal PEAK to PEAK level:

For NTSC format, the video signal level is 140±15IRE

For PAL format, the video signal level is 1000±200mV

If the level is too low, it will cause the image to lose quality and limit the distance it will travel over cable. If the level is too high, it will distort the image.

SYNC level: Tests the amplitude of the video sync pulse to verify if the video level is correct.

For NTSC format, the SYNC level is $40 \pm 5IRE$

For PAL format, the SYNC level is $300 \pm 35 mV$

If the level is too low, it will cause the image to not frame out properly. If the level is too high, it will lead to a poor quality image.

COLOR BURST level: Testing the color burst level will determine if the burst signal is sufficient to trigger the displays color producing circuit. Burst will diminish in amplitude over longer cable runs and can get fall below the threshold for the video display to show a color image.

For NTSC format, the Chroma standard level is 40 IRE

For PAL format, the Chroma standard level is 280mV

If the Chroma level is too low, the color will not be as deep, and some details of the image will become lighter. If the Chroma level is too high, there will be distortions on the image. If the coaxial cable is too long, it will reduce the chroma level.

Image loop test: Test video optical transmitter and receiver and video cable, connect one end to the tester "VIDEO OUT" port ,and the other end connected to "VIDEO IN" port, the signal send via "VIDEO OUT" port ,and received via "VIDEO IN" port , If the testing is ok, the tester displays several gradually dwindling photos on the desktop.

3.3.12 Color-bar generator (TV OUT)

Click to enter, the tester sends the color bars from the "Video out" port ,Click the icon "PAL", select "PAL/NTSC" output formats

Click the selected color-bars, testing image or single bar (red, green, blue, white or black). Double click to full display on the screen and output, click to return main menu. Application

BNC loop test: Tester can send and receive color bar generator through the tester's "video out and video in" port, it is for testing transmission channels, such as video Optical, video cables etc. The tester "VIDEO OUT" port to connect optical terminal's sending port, and "VIDEO IN" Port to optical

terminal's connect its receiving port.

A. When maintaining the dome camera, the tester sends out the color bar by its BNC output to the monitor at the monitoring center. If the monitor receive the color bar, it means the video transmit channel works normally. Meanwhile on the basis of the received color bar, the monitoring center can judge if transmission has loss or interference.

- B. The tester sends out the pure color bar (such as white and black color), to test the monitor whether has bright or black dots
- C. The tester sends out video signal image to test if the image received by the monitor has excursion.

3.3.13 SDI/EX-SDI Camera Test (*Optional)

SDI camera test, Dome camera test and PTZ control, click icon

SDI Tester		🖀 🐼 🗋 3:45 PM 🔀
		Photo
		Snapshot
	No video signal input !	o o) Record
		Playback
		U PTZ
		A Set

to enter.

When tester receives SDI camera image, it will display the image data.

Double-taps on the screen to make the image displayed full screen.

The tester supports resolution as follows:

1280x720P 25Hz 1280x720P 30Hz 1280x720P 50Hz 1280x720P 60Hz 1920x1080P 25Hz 1920x1080P 30Hz 1920x1080I 50Hz

IPC tester's HDMI output port can be used as SDI to HDMI converter, output HD SDI image to HD TV monitor.

Select relative function on the right side Toolbar to operate, "Snapshot", "Record", "Photos",

"Video playback", "PTZ control", "Video Brightness and Storage set", the operation is the same to the video monitor function, please refer to the relevant instructions "3.3.1" in the manual.

Click \bigotimes , or press (MENU) to quit.

3.3.14 CVI camera test (*Optional)

When HD CVI signal input, the tester will display the image resolution on the top bar. Double-taps on the screen to make the image displayed full screen.

The tester supports resolution as follows

1280x720P 25FPS / 1280x720P 30FPS / 1280x720P 50FPS / 1280x720P 60FPS

1920x1080P 25FPS / 1920x1080P 30FPS/2560x1440P 25FPS/2560x1440P 30FPS/3840 x 2160

12.5/15 FPS.

$(1) \ \textbf{PTZ control}$

1.1 Coaxial PTZ control

Click the icon"PTZ" on the right toolbar to do the corresponding setting.

"Port": select coaxial control

CVI			🗑 🐙 📋 8:41 AM 🔀
	UTC		
	RS485/RS232		

Enter PTZ address to perform parameters setting.

Operation instructions, please refer to "3.3.1 PTZ (1) Video monitor test".

The PTZ address in the tester must be consistent with the dome camera or decoder, then the IPC

tester can test .After setting the parameter, the tester can control the PTZ and lens.

To control PTZ by screen touch:

Tap left, right, upward and downward on the touch screen to control the PTZ rotation direction, PTZ cameras will rotate accordingly. By two fingers move outward and inward on the touch screen to zoom in and out the PTZ.

Set preset position

Setup preset position: Move the PTZ camera to the preset position, then Tap it and input preset position number. Tap "Set position" to complete set preset position.

Call preset position

Tap the preset position:

Tap the preset position area, input preset position number. Tap "call position" to complete call preset position.

1.2 RS485 control

Operation instructions, please refer to "3.3.1 PTZ (1) PTZ control parameters setting".

(2) Coaxial camera menu setting

Tap icon "UTC", select "menu setting" to enter the dome camera menu.

Input calling dome camera menu address code, after finishing the parameter settings, you can press the

(3) Snapshot, record, photo viewer and video play back, please refer to "3.3.1 PTZ (1) Video monitor test".

Tap "close menu" or press the key " (ENTER)" to close camera menu.

(4) Save setting

Click icon "Set" on the right toolbar to enter storage setting.

Support auto-storage and manual storage.

When select manual storage, user can name and store the files.

3.3.1 TVI camera test (*Optional)

When HD TVI signal input, the tester will display the image resolution on the top bar. Double-taps on the screen to make the image displayed full screen.

The tester supports resolution as follows:

1280x720P 25FPS / 1280x720P30FPS / 1280x720P 50FPS / 1280x720P 60FPS

1920x1080P 25FPS / 1920x1080P 30FPS / 1920x1080P 50FPS / 1920x1080P 60FPS /2048x1536P 18FPS/2048x1536P 25FPS/2048x1536P 30FPS /2560x1440P 15 FPS/2560x1440P 25 FPS/2560x1440P 30 FPS/2688x1520P 15FPS/2592x1944P 12.5FPS/2592x1944P 20FPS/ 3840 x 2160 15 FPS

E			

Application: PING testing is the most conventional network debugging tools. It is used for testing if the connected. IP camera or other network equipment's Ethernet port is working normally and the IP address is correct.

It's normal that the first data packet will be lost when test start.

(3) Network test (Ethernet bandwidth test)

To use the Network tester, you will need two IP testers. One is used as a Server and the other as a Client. Both devices must be on the same network segment in order to communicate. Click the final icon to open the Network Tester app.

			a 🥌 🗐 06:	
ING	Service IP: 192.168.0.238		192.168.0.238	
NG

(4) Port Flashing

Connect a network cable to the meter's "LAN port", click the icon **E** to open the Port Flashing app. Click "Start". The IP tester sends a unique signal to make the connected LAN port of the switch

flash.

If the tester and PoE switch are connected well, the LAN port of POE switch flash at special frequency, If not, no any changes on the LAN port.

Application:

The tester will send special signals to make the connected LAN port flicker at special frequency, which will enable the installers to easily and quickly find the connected Ethernet cable. This function can prevent mistakenly insertion or disconnection non-corresponding cable to artificially interrupt network connection

(5) DHCP server

Click on the DHCP icon to open the DHCP server app. Select the "Start" check box at the top and make any desired changes to the network settings. Click "Save" to start assigning dynamic IP addresses for IP cameras and other networked devices. Click the "Refresh" button to check your Client list.

Network T			a 🛷 🗿 06:14 🚺

		Refresh	

(6) Trace route

It is used to determine path of the IP packet access target.

Note: Trace route testing results only for reference, for accurate test route tracking, Pls use professional

Ethernet tester.

Click to enter trace route. Input tracking IP address or domain name in the Remote Host IP. Set maximum hop count, normally default is 30.

Click "Start" to trace the goal address.

Network Too				👼 🥏 🔒 06
PING	Native IP:		Remote IP:	www.google.com

race Route				
-				

(7) Link monitor

Click the icon to open the Link Monitor app. This app is used to see if an IP address is occupied by other network devices. This will avoid new address conflicts.

Click "Add " and enter the desired IP address. To test different network segments, click the "Settings" icon on the main menu and go to IP Settings and make the desired changes. Once the desired IP addresses are added to the Link Monitor list, click "Start". If the IP address status shows a check mark the IP address is occupied. If the IP address status shows an X the IP address is available. Click "Stop" to stop the testing.

Network Tool -			a 🗐 🦉 🗿 🐻
and a second			
	Number	IP Address	Status
	1	192.168.0.1	Ø
//?	2	192.168.0.2	0

	4	192.168.0.4	8
	5	192.168.0.5	Ň
tort Flashing			
Frace Route	Stop	Add	Delete

Application:

Add an IP camera or other network device to the current network group, the new IP address must not be occupied, otherwise it will cause IP conflicts and stop the equipment normal working. Link monitor can check if the new setting IP address is occupied.

3.3.4 Rapid IP Discovery

Connect the cable to tester's LAN port. Press () to enter Rapid IP Discovery app.

Click "Start" to search all IP address of connected equipment in whole network segment.

3.3.5 PoE power / DC12V 3A and DC 5V 2A USB power output

When the tester is turned on, the DC 12V and DC 5V power output functions are automatically turned on. If the IP tester is turned off, the DC 5V USB can still be used to power an external USB device. To use the PoE Power Output function, click on the icon and change the switch "ON" or "OFF". The IP camera needs to be connected to the LAN port before you turn PoE Power on. If the IP camera Supports PoE, the PoE power is delivered via pins 1, 2, 3, and 6 on the LAN port. The IP tester will display "48V ON" at the top of the screen when the POE power is still on.

DE power output PoE 48V ON/4.1W	<u>.</u> • • û
	LAN LAN LAN LAN LAN LAN LAN LAN
POE/DC power output : ON	power4.1W

1. Don't input power into the "DC12/3A OUTPUT" port.

Note

- 2. Don't output this DC12V/3A power to the DC12V/IN port of the IP camera tester to avoid destroy.
- 3. The IPC tester power output is close to 3A, if the IP camera's power is over 3A, the tester will auto enter protection mode. Disconnect all the connections of the tester and then connect the tester with power adaptor to resume the tester.
- Before turning on the PoE power output, please make sure the IP camera supports PoE power.
 Otherwise it may damage the IP camera.
- 5 Make sure you plug in your IP camera to the LAN port prior to turning on PoE power.
- 6. Make sure the tester is full charged or more than 80% charged, otherwise the tester will shows
- "low power", "not able to supply power".

Test LAN cable or telephone cable.

Connect LAN cable or telephone cable with the CCTV tester and cable tester. And then the

connecting status, cable type and the sequence of wires as well as the serial number of the cable tester

kit will be displayed.

The number of the cable tester is 255

If need several different number other types cable testers, should pay the additional cost.

Cable test

Tap "cable test sketch map", pop up Straight-through cable and crossover cable sketch, It is for line sequence reference ,when the crystal on the first pressure in the twisted-pair.

3.3.7 RJ45 cable TDR test

Connect cable to tester's LAN port, click icon

Test once			
Repeat test			
Ivanced Test	line pair	length(m)	attenuation (d8/100m)
لم	1		
Ju	6		
The second	4	27.4	
L.	8	27.4	

to enter RJ45 cable TDR test app.

Test once: Test cable status, length and attenuation.

Repeat test: Continue to test cable status, length and attenuation.

Status: After link up, screen display "online", if not link up or open circuit, screen display "open circuit", if cable pair is short circuit, screen display "short circuit".

Length: The max test length is 180 meters, when cable is open circuit or short circuit, can test the cable length, if screen display "online", the testing result would be not accurate.

Cable quality test: Green is good quality cable, Yellow is Poor quality cable, Red is water poured cable, the attenuation value will be displayed when cable over 10 meters.

Test once						
Repeat test						
Advanced Test	line pair	length(m)	attenuation (dB/100m)	reflectivity (%))impedance(O)	
6	12					
	····· }	27.4				
	•••••• \$	26.6				
ſ	· ?	27.4		100		

Advanced Test: Test cable pair status, length, attenuation, reflectivity, impedance, skew and other parameters.

Attenuation reflectivity: After link up, if reflectivity value is 0, it is the best quality communication **Impedance:** After link up , if the impedance value is 100 Ω , it is the best quality communication, the range is generally in 85-135 Ω .

Skew: After 1000M link up, when skew value is 0ns,it is the best quality communication, if over 50ns, will cause a Bit Error Rate in the transmission.

Connection diagram:

Cable sequence diagram:

A straight- through and cross-over cable diagram, the cable sequence display for reference.

Click "Help", check the instruction of all parameters.

3.3.8 Cable Tracer

Connect test cable or BNC cable to the UTP port or the CABLE SCAN (VIDEO OUT) port on the

bottom. Click icon _____ to enter, click the Number on the screen to adjust audio type.

Use the blue Combination cable identifier and network cable tester's copper pointer to touch all the cables in the bundle.

You are searching at the other end. The cable that gives off the loudest tone is the cable connected to the tester. Press the + or - buttons on your blue cable identifier to adjust the volume.

ANote: Install two AAA batteries in your blue Cable Identifier.

Note: While the cable tracer is receiving the audio signal from the tester, it may be induced into adjacent or crossing cables, however, the cable that makes the loudest noise is the one that's connected to the meter.

Application

It's convenient for people to find out the other end of the cable from the messy cables in security maintenance and network engineering.

While searching BNC cable, connect one port of the alligator clips to the copper core or copper net of the BNC cable, the other one to connect the earth wire (barred windows).

Note: The battery of the cable tracer must according to corresponding positive pole + and

negative pole -, otherwise will damage the tester.

Note: While the cable tracer tester is receiving the audio signal from the tester, it may be influenced by other signals and make some noise.

3.3.9 TDR cable test (*Optional)

Note: The testing cable can't be connected to any equipment, otherwise it will damage the

tester!

Connect Alligator clip cable to the TDR port, and the cable must connect well before testing, otherwise it will influence the accuracy. Click is to enter, and click "Start" to test

Built-in BNC cable, network cable, RVV control cable, Telephone line and TVVB cable etc can test, 11 groups user-defined cable can be set.

Click "Cable" "Type" to select cable and start testing. One tap on "Start" do one testing. If select built in cable type for testing, click "+" and "-" to adjust cable's wave speed.

		Onen [.] Om	
	Numbe		Concession of the Concession o
Cal	1	SYV 75-5	207

		TVVB-3 elevator video line	190
	10	User- defined1	200
			enders av

User-defined calibration: Choose the cable 100 meters to 200 meters (more than 50 meters), click "Cable", "Type" to select user-defined 1 for calibration, 11 groups user-defined can be set.

TOR				ම හැ 🙆 06:30 🗙
	0	pen:0 m		
	Cable :	User- defi	ned1	
	Туре :	SYV 75-2		
	Wave :	_ 200 .	÷	
	start		Calibratio	n

1.Select user-defined and click "Calibration" to enter test , click "user-defined 1" can define cable

name, such as: AiPu BNC-5

2. Click "Cable", "Type" to select cable, and corresponding type, for example, if testing BNC cable, select "BNC", if testing communication cable 75-2, select SYV 75-2.

Select type of Cable BNC SYV 75-2	• 0 m	
BNC	0	
SYV 75-2		
Cable	0	
Ethernet cable	0	
TVVB-3	0	
S Other	0	

3.Click "+" or "-" to adjust wave speed ,while display length is the same with the actual Length ,click "Save" to save calibration data. It can be used for the same cable testing next time.

Application: TDR test is used for pulse reflection method, to transmit pulse signal for tested cable, when cable is open circuit or short-circuit, reflected pulse is generated, the tester receives and deals with the reflected wave, measurement results displayed on the screen. TDR can test cable open circuit and short circuit, help engineer quickly find the cable's problem location. It is more convenient and efficient to repair the faulty cable.

Note: The TDR reflect signal could be affected by the cable quality/ cable's not well connected etc to cause the different TDR measurement, the TDR measurement is for reference only.

3.3.10 PoE Voltage test

Connect a network cable from a PoE switch to the IP tester's PSE IN port. Connect an IP camera or other PoE using node to IP tester's LAN port, the PoE voltage and the cable's pin connection status show on the screen.

Note: This test if for measuring the voltage being drawn by the PoE node and the IP tester must be between the PoE switch and the PoE node for this test to work.

Note: The PoE switch must be connected to the PSE IN port. The powered device such as IP camera or other PoE node must be connected to the LAN port.

Note: Do not connect PoE power supply equipment (such as a PoE switch) to the tester's UTP/SCAN port, otherwise it will damage the tester.

PSE transmission

When PoE / PSE voltage testing, PoE/PSE conntect to the tester's PSE "IN" port, the camera connect to tester's Lan port, tester not only can transmit voltage to supply power for camera, but also transmit data at the same time, as well as the computer connect to the PoE/PSE, it can log in connected tester's PoE camera.

3.3.11 12V power input test

Connect 12V power adaptor to tester's charging port, then click icon "PoE" to enter voltage measurement app, screen show the current adaptor input voltage and power. Note: the current 12V input measured power is the battery charging power and the device working power, the measured power will change depending on the different of battery power and backlight brightness.

Warning: Not allow connect device with input power over 17V to tester "12V IN" port, otherwise it will damage the machine.

3.3.12 Digital Multi-meter (*Optional)

1) SYMBOLS:

U:DC Voltage Measuring	A:DC Current Measuring
Ω :Resistance Measuring	↓ :Diode Testing
~ UAC Voltage Measuring	$\stackrel{\sim}{A}$ AC Current Measuring
»):Continuity Testing	∔ :Capacitance Measuring

AC/DC	Voltage and current measurement state display
Auto- range	The Multimeter auto adjust the range by input signal or tested components
Data hold	Hold data
Relative	Display the relative measurement value
measurement	Press the key to change display state
10A socket	In 10A current measurement state ,indicate use 10A socket
0	The current measurement value over the range, if in the Auto range state, to
Over range	switch Auto.

2) OPERATING INSTRUCTION

A. DC Voltage Measuring

WARNING!

You can't input the voltage which more than 660V DC, it's possible to show higher voltage, but it's may destroy the inner circuit.

Pay attention not to get an electric shock when measuring high voltage.

a. Connect the black test lead to the "COM" jack and the red

test lead to the "V/ Ω " jack.

b.Select U, enter the DC voltage measurement.

c. the tester default Auto range status ,by click "DC auto range" ,

press the

key can select manual range and restore auto range .

Manual range: $0.000V \rightarrow 6.600V$ range $00.00V \rightarrow 66.00V$ range $000.0V \rightarrow 660.0V$ range $000.0W \rightarrow 660.0W$ range

B. AC Voltage Measuring

WARNING!

You can't input the voltage which more than 660V AC, it's possible to show higher voltage, but it's

may destroy the inner circuit.

Pay attention not to get an electric shock when measuring high voltage.

a. Connect the black test lead to the "COM" jack and the red test lead to the "V/ Ω " jack.

b. select $U \sim$, enter the AC voltage measurement.

C.the tester default Auto range status, by click "AC auto range"

d. Manual range can be select , press the key "NEAR" to restore Auto range.

e. Manual range: 0.000V → 6.600V range

- 00.00V → 66.00V range
- 000.0V → 660.0V range
- 000.0mV → 660.0mV range

C. DC Current Measuring (only manual range)

WARNING!

Shut down the power of the tested circuit, and then connect the meter with the circuit for

measurement.

a. Connect the black test lead to the "COM " jack and the red test lead to the "mA" jack for a maximum

of 660mA current. For a maximum of 10A, move the red lead to the 10A jack.

b. select **A**, enter the DC current measurement, the screen display"DC current ", can select manual range;

c. Manual range:

0.000mA → 6.6mA range 00.00mA → 66.00mA range 000.0mA → 660.0mA range 00.00A → 10.00A range (use 10A

socket)

d. Select the range to enter current measurement

- When only the figure "OL" is displayed, it indicates over range situation and the higher range has to be selected.
- When the value scale to be measured is unknown beforehand, set the range selector at the highest position.
- The maximum current of mA socket is 660mA, over-current will destroy the fuse, and will damage the meter.
- The maximum current of 10A socket is 10A, over-current will destroy the meter, and will damage the operator.

D. AC Current Measuring (Only Manual range)

WARNING!

Shut down the power of the tested circuit, and then connect the meter with the circuit for

measurement.

a. Connect the black test lead to the "COM" jack and the red test lead to the "mA" jack for a maximum of 660mA current. For a maximum of 10A, move the red lead to the 10A jack.

b. select \widetilde{A} , enter the AC current measurement, manually select the range

000.0mA \rightarrow 660.0mA range

c. Manual range: 0.000mA → 6.600mA range 00.00mA → 66.00mA range

00.00A \rightarrow 10.00A range (use 10A socket)

- When only the figure "OL" is displayed, it indicates over range situation and the higher range has to be selected.
- When the value scale to be measured is unknown beforehand, set the range selector at the highest position.
- The maximum current of mA socket is 660mA; over-current will destroy the fuse, and will damage the meter.
- The maximum current of 10A socket is 10A, over-current will destroy the meter, and will damage the operator.
- ♦ In "AC" mode, only can input "AC", if not, will damage the meter.
- E. Resistance Measuring

WARNING!

When measuring in-circuit resistance, be sure the circuit under test has all power removed and that all capacitors have discharged fully.

a. Connect the black test lead to the "COM" jack and the red test

lead to the "V/ Ω " jack.

b. to select Ω , enter the Ω measurement

the tester default Auto range status, Press the key manually select

range ,Press "NEAR" to restore "Auto range"

Manual range:(Connect the red lead to black leads, will display the measure range)

$\Omega 0.000$	\rightarrow	660Ω range
0.000 KΩ	\rightarrow	$6.600 \text{K}\Omega$ range
00.00 KΩ	\rightarrow	$66.00 \text{K}\Omega$ range
000.0 KΩ	\rightarrow	$660.0 \text{K}\Omega$ range
0.000 MΩ	\rightarrow	$6.600 M\Omega$ range
00.00 MΩ	\rightarrow	$66.00 M\Omega$ range

F. Continuity Testing

WARNING!

When testing the circuit continuity, be sure that the power of the circuit has been shut down and all capacitors have been discharged fully.

a. Connect the black test lead to the "COM" jack and the red test lead to

the "V/ Ω " jack.

b.to select ϑ , enter the continuity test, Connect test leads across two

point of the circuit under testing.

c. If continuity exists (i.e., resistance less than about 50Ω), built-in

buzzer will sound.

G. Diode Testing

WARNING!

The capacitance of a capacitor should be tested separately, should not test in the installation of circuit.

a. Connect the black test lead to the "COM" jack and the red test lead to

the "V/ Ω " jack. (the red lead anode "+")

b. to select \clubsuit , enter the diode testing.

c. Connect test red lead across to the anode, the black lead to the cathode of the diode under testing.d. Connect test red lead across to the cathode, the black lead to the anode of the diode under testing.e .Tested diode, forward voltage low 30my,there is sound indication ,then can finish the testing quickly

e .1ested diode, forward voltage low 30mv, there is sound indication , then can finish the testing quickly without view the screen.

H. Capacitance Measuring

WARNING!

To avoid electric shock, be sure the capacitors have been discharged fully before measuring the capacitance of a capacitor.

a. Connect the black test lead to the "COM " jack and the red test lead to the "V/ Ω " jack.

b. Select " \ddagger " to enter, enter the capacitance measurement.

c. The tester default auto range status, and manual range by press upward and downward key, Auto rang by press the key "NEAR"

Manual range: 0.000nF	\rightarrow	6.600nF range
00.00nF	\rightarrow	66.00nF range
000.0nF	\rightarrow	660.0nF range
0.000uF	\rightarrow	6.600µF range
00.00uF	\rightarrow	66.00µF range
000.0uF	\rightarrow	660.0μF range
0.000mF	\rightarrow	6.600mF range
00.00mF	\rightarrow	66.00mF range

d. Before connect test leads across two sides of the capacitor under measurement, be sure that the capacitor has been discharged fully.

a. The capacitance of a capacitor should be tested separately, should not test in the installation of circuit.

- b. To avoid electric shock, be sure the capacitors have been discharged fully before measuring the ca pacitance of a capacitor.
- c. While testing the capacitance of a capacitor to

660uF, the Max time will be 6.6 seconds, if the capacitor is leaked or damaged,

the data can't be read. The tester will be normal after disconnecting the capacitor.

Manual range and Auto range

When testing, click "Range select" to change the value, click "Auto range" to enter Auto measurement.

DMM						<u>ē</u> 8	9 06:33 🔀
			0.0	000	V		
Manu Bang		6.600 V					
	e.u~ 	0.000 v					
0~6.600 V							
0~66.00 V	~		~			-	
manager and a second	Ũ	A	Ã	Ω	3))	Ŧ	+
0~660.0 V	Voltage	DC Current	AC Current	Resistance	Buzzer file	Diode	Capacitance
0~660.0mV		v					
Range		Hold	data	Diffe	rence	Auto-	Range

Data hold

Click "Hold data" to enter, the data be hold, the value is green. Press it again to quit.

Relative value measurement

Click "Relative" to enter, the tester Auto-save the data, the displayed new measurement and relative value is red color. Press it again to quit.

The hold function and the relative value be combined use, the display value is yellow.

The meter protection

> Voltage protection

You can't input the voltage which more than 660V AC, it's possible to show higher voltage, but

it's may destroy the inner circuit.

> Resistance, Continuity, Diode, PTC component Protection

Wrong input voltage, will Auto enter protection state, It only suitable for short and limit time work. If input voltage over 600V, will damage the meter.

> mA current fuse range: 250V 1A

if the current over the rated range ,fuse will melt to protect the meter .Pls use the same model when change the fuse, Pls opens the battery cover to change.

Note: 10A socket without fuse protection, if over the current range.

Wrong using the 10A socket to measure the voltage, will damage the meter.

3.3.13 Optical power meter (*Optional)

Click icon to enter ,with five wavelength 1625nm,1550nm, 1490nm, 1310nm ,1300nm, 850nm, linear or nonlinear optical power display, both for optical power testing and Fiber link loss relative measurement. It is necessary tool for installation and maintenance optical fiber communication, cable television and CCTV security system.

Note: Please keep the fiber connector and the dust cap be clean, and clean the detector with the special alcohol.

Data hold

While testing, click "Hold" to data hold, the data will not change. It's convenient to read. Press again to quit.

ОРМ		-70.00) dBm		₩ û 06:30 🔀
850	1300	1310	1490	1550	1625
Hold Dat	a	Difference	mW		dBm

Relative power value (optical link loss) measurement

While testing, set the wavelength for measurement. Click "relative"(difference) to test, the tester Auto save current fiber power value as the base reference value. Input another optical fiber to be measured, the displayed new measurement and relative value is red color. Press it again to quit.

Data hold and Relative measuring use together, the data is yellow while the function is effect.

3.3.14 Visual Fault Locator (*Optional)

3.3.15 Audio Record

Connect an audio device to the IP tester's audio input port. Click the icon to enter the Audio

Recorder app. Click the red button to stop, and the unit will prompt you to save the recording.

3.3.16 Data monitor

Pls click icon	to enter					
Data monitor	485 menine	ළි මේ û ගොත <mark>න</mark>	- III late mondot	Bad Dita Adrance	Baud 113800 15300 1500 900 400 2400 2400 2400 2400	# # # # # # # # #
HEX Send HEX Show Setting		Send				Send

Click "Setting" to choose the baud rate of RS485, it must be the same as the DVR or the Control. Keyboard. The DVR or Control keyboard send the code to the tester, if it can be read, the protocol will shown on the upper right, like Pelco D, if not, like P:---

Though the RS485 port, display the PTZ control code of the multifunctional keyboard or the DVR.

Controller can check the status of the RS485 transmission through the code on the display. (The RS485 communication rate must be the same.)

Application: Check the RS485 communication states of the video optical transmitter whether normal.

Engineer can analyze the protocol and check the data through the displayed code.

3.3.17 Audio player

3.3.18 Media Player

The Media player can browse video and image files. It supports the video formats of MP4, H.264, MPEG4 and MKV. The IP tester recorded files can play directly via the Media player. The Media player will automatically display the video files from the SD card. Click on the desired file to play. Click RETURN to exit.

To rename or delete an existing file, press the file name for a few seconds until the screen below appears. You can then rename or delete the file by pressing the desired option.

3.3.22 Update

Copy the downloaded update file to SD card "update" directory, if no directory, please create one.

Click the *icon* to open the Update menu. Select "Local Update" to update via the SD card or select "Online Update" to check for updates on the internet.

Application U	ipdate 👼 🕫 06:33 🔀
Local update	
Online updates	
System update	
	Update All

If there are update programs, applications will be listed in the interface, click related applications, update to the latest version.

3.3.23 Office

Quick office app (support excel, word, ppt format) doc. editable

3.3.24 LED Flashlight

enter.

It is convenient for the installation or maintenance in the evening or in the dark. Click icon

While in the flashlight app, click the red button to turn on the LED lamp. Press it again to turn it off. If you don't press the red button \bigotimes to shut off the lamp and press the button to exit the app, the lamp will stay on. Click the Time Setting button to set a timer that will shut off the lamp.

3.3.25 Browser

Click icon 😚 to enter

Type in the camera's IP address and press "Go" to access the IP camera's interface.

NOTE: You will not be able to view live video in the web browser. For viewing video, use the IP

The IP camera and IP tester be on the same network segment for the browser to interface with the camera. If they are not in the same segment, click the button or press "RETRUN" to exit. Open the "Settings" app from the main menu to change the IP tester's network settings to match those of the IP camera.

3.3.26 Notepad

Notepad can be used to record the important testing results, click the key "Save" to save the contents.

Notepad can auto record the storage date and time.

pls click to view the notepad, all saving contents display. Click each record bar to show the details. Press the record bar for several seconds, prompt whether delete it.

Version information: Shows applications version information, if press any apps icon several seconds to uninstall.

Screen display rotation: Click on "Screen Rotation" to flip the IP tester's display 180 degrees. This function is very convenient for the user to connect the LAN cable on the bottom of the unit without having to flip the unit itself.

PTZ address scan: You can toggle the PTZ Address scan off or on before entering the "PTZ controller" app. This needs to be turned on in order to use the PTZ Scan feature of the PTZ app.

User Feedback: If you have any comments or suggestions for the tester, please connect it to network and write your feedback.

Lock Screen: The meter default is not locked. You can choose password Lock screen, pattern Lock screen or "NO".

Password Lock Screen: Set password, you can input digitals, letters or characters as password, input it again to confirm .when the meter is in standby mode or turn it on, you can input your password to enter.

Pattern Lock Screen: Drawing a pattern to lock. While the meter is in standby mode or turn it on, you can input your pattern to enter.

Modify Lock screen password, you need input lock password again. Select password Lock screen or pattern Lock screen to reset lock screen password. After reset pattern lock screen, you need to draw a new lock pattern.

Restore the factory settings: If the tester to restore factory settings, all your personal files and apps will be removed.

3.3.28 File explorer

Click "File" on the top bar tool, can select internal or external storage. Click on the upper right corner Icon "... ".will pop-up menu, you can select other operation or exit.

3.3.29 Theme

Click Theme icon to enter themes setting.

Desktop style : You can select Lite mode or normal mode.

Theme:

Pressing square area's any color icon several seconds, the selected color icon will be auto move the

rectangle area, if you press selected color several seconds, and it will be auto deleted.

Theme colors include fixed order and random order, and click "set" to save.

Color

When set background color, you can select colors from Color Phase, and also can input color's RGB to

set.

After finished color setting, click "set" to set it as desktop or application background.

Set as desktop background: Setting color as desktop background.

Set as application background: Set color as application background.

Set at the same time: Setting color as desktop background and application background.

Cancel: Cancel current setting.

Picture:

Click Picture to select one, and set as temporarily background to view setting effect. Click "more" to select pictures from local file, and click set to set picture as background.

3.4 Audio test

You can test the audio input from audio pickup devices by connecting the audio pickup device to the IP tester with the supplied audio cable.

3.5 HDMI output

The built in HDMI output port can output live video from an analog or IP camera, recorded files, media files and images to HDTV monitors. Connect an HDMI cable from the IP tester to an HDTV monitor at any time. It supports up to 1080P resolution.

3.6 PoE power output

The IP tester supports PoE (Power over Ethernet) output to an IP camera via the LAN port. Data transmission and 48VDC use the network cable's 1, 2, 3, and 6 pins to deliver power. If the IP camera supports PoE, you can directly connect to the camera without the use of an external power supply.

a. Please make sure the cable connected to the tester's Lan port is straight-line cable and has no short circuit, otherwise will damage the tester

b. Before using PoE power output, pls check the IP camera whether supports POE powered, otherwise it will damage the IP camera.

c. The instrument's PoE maximum power output is 24W. If Ultra- high-power load happens, the tester will enter protection mode .

3.7 DC12V 3A power output

When the IPC tester is turned on, the DC 12V power output ON by default. The smaller end of the supplied converter cable connects to the tester's DC12V/3A OUTPUT and the other end connects to the camera's power input.

Application

Power output function is mainly used in the camera field demonstration and testing, meanwhile, for some cameras installation sites, If there is no power outlet for the adapter to power the camera, the tester can offer temporary power for it. But we do not suggest tester supply power for a long time.

- a. Don't input any power into the "DC12/2A OUTPUT" port of the tester.
- b. Man-made damage is not within our company's warranty.
- c. The IP tester's power output capacity is 2A. If the IP camera uses more than 2A, the tester will automatically enter a protection mode.
- d. Disconnect all cables from the tester and reboot it to resume using the tester. The IPC tester power output is close to 2A, if the IP camera's power is over 2V, the tester will auto enter protection mode. Disconnect all the connections of the tester and then connect the tester with power adaptor to resume the tester.
- e. Make sure the tester has a sufficient charge, otherwise tester can't provide enough output power.

3.8 USB 5V 2A power output

When the tester is turned on, the DC 12V and DC 5V power output functions are automatically turned on. If the IP tester is turned off, the DC 5V USB can still be used to power an external USB device. **NOTE: The USB port is for power only and not data.**

Diode

Range	Resolution	Function
2.0V	lmV	Schottky diode:0.15~0.25V
		rectifier diode:0.6~1.0V
		triode PN junction:0.5~0.8V

Capacitance

Range	Accuracy	Resolution
6.600nF	± (0.5%+20)	1pF
66.00nF	± (3.5%+8)	10pF
660.0nF		100pF

6.600µF		1nF
66.00µF		10nF
660.0μF		100nF
6.600mF	± (5%+8)	1μF
66.00mF		10µF

4.3 Optical power meter specifications

Measure Range(dBm)	-70~+10dBm
Wavelength(nm)	850nm,1300nm,1310nm,1490nm,1550nm,1625nm
Detector	InGaAs
	<±3%dB(-10dBm,22°C)
Uncertainly	<±5%dB(full range,22°C)
Display Resolution	Linear:0.1%; Nonlinear:0.01dBm
Operating Temperature(°C)	-10~+50
Storage Temperature (°C)	-20~+70
Connector type	FC/PC

4.4 Visual fault locator specifications

Laser type	LD
Wavelength Calibration	650nm
Output power	5mW (Optional 10mW, 20mW)
Modulation mode	CW/1Hz/2Hz

Measurement Range	5KM (Optional 10-20KM)
Connector	FC/PC exchangeable
Working Temperature	-10°C~+50°C
Operating Temperature	-20°C~+70°C
