Regulatory Information

FCC Information

Please take attention that changes or modification not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

FCC compliance: This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- · Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

FCC Conditions

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions:

- This device may not cause harmful interference.
- This device must accept any interference received, including interference that may cause undesired operation.

EU Conformity Statement

This product and - if applicable - the supplied accessories too are marked with "CE" and comply therefore with the applicable harmonized European standards listed under the EMC Directive 2014/30/EU, LVD Directive 2014/35/EU, the RoHS Directive 2011/65/EU.

2012/19/EU (WEEE directive): Products marked with this symbol cannot be disposed of as unsorted municipal waste in the European Union. For proper recycling, return this product to your local supplier upon the

purchase of equivalent new equipment, or dispose of it at designated collection points. For more information see: http://www.recyclethis.info .

2006/66/EC (battery directive): This product contains a battery that cannot be disposed of as unsorted municipal waste in the European Union. See the product documentation for specific battery information. The battery is marked with this symbol, which may include lettering to indicate cadmium (Cd), lead (Pb), or mercury (Hg). For proper recycling, return the battery to your supplier or to a designated collection point. For more information see: http://www.recyclethis.info.

Industry Canada ICES-003 Compliance

This device meets the CAN ICES-3 (A)/NMB-3(A) standards requirements.

Applicable Model

This manual is applicable to the following models.

Table 1-1 Applicable Model

Series	Model
HWD-5100H	HWD-5104H
	HWD-5108H
HWD-5100MH	HWD-5104MH
	HWD-5108MH
HWD-5100H-G4	HWD-5104H-G4
	HWD-5108H-G4
	HWD-5116MH-G4

HWD-7200MH-G4	HWD-7216MH-G4

Symbol Conventions

The symbols that may be found in this document are defined as follows.

Symbol	Description	
<u> </u>	Indicates a hazardous situation which, if not avoided, will or could result in death or serious injury.	
Caution	Indicates a potentially hazardous situation which, if not avoided, could result in equipment damage, data loss, performance degradation, or unexpected results.	
Note	Provides additional information to emphasize or supplement important points of the main text.	

Safety Instruction

- Proper configuration of all passwords and other security settings is the responsibility of the installer and/or end-user.
- In the use of the product, you must be in strict compliance with the electrical safety regulations of the nation and region.
- Firmly connect the plug to the power socket. Do not connect several devices to one power adapter. Power off the device before connecting and disconnecting accessories and peripherals.
- Shock hazard! Disconnect all power sources before maintenance.
- The equipment must be connected to an earthed mains socket-outlet.
- The socket-outlet shall be installed near the device and shall be easily accessible.
- For the device with the sign 4 indicating hazardous live, the external wiring connected to the terminals requires installation by an instructed person.
- Never place the device in an unstable location. The device may fall, causing serious personal injury or death.
- Input voltage should meet the SELV (Safety Extra Low Voltage) and the LPS (Limited Power Source) according to the IEC62368.
- High touch current! Connect to earth before connecting to the power supply.
- If smoke, odor or noise rise from the device, turn off the power at once and unplug the power cable, and then please contact the service center.
- Use the device in conjunction with an UPS, and use factory recommended HDD if possible.
- This equipment is not suitable for use in locations where children are likely to be present.
- CAUTION: Risk of explosion if the battery is replaced by an incorrect type.
- Do not ingest battery. Chemical Burn Hazard!
- This product contains a coin/button cell battery. If the coin/button cell battery is swallowed, it can cause severe internal burns in just 2 hours and can lead to death.
- Improper replacement of the battery with an incorrect type may defeat a safeguard (for example, in the case of some lithium battery types).
- Do not dispose of the battery into fire or a hot oven, or mechanically crush or cut the battery, which may result in an explosion.
- Do not leave the battery in an extremely high temperature surrounding environment, which may result in an explosion or the leakage of flammable liquid or gas.
- Do not subject the battery to extremely low air pressure, which may result in an explosion or the leakage of flammable liquid or gas.
- Dispose of used batteries according to the instructions.
- Keep body parts away from fan blades and motors. Disconnect the power source during servicing.
- · Keep body parts away from motors. Disconnect the power source during servicing.
- Use only power supplies same with the original model, or LPS power supplies with the same voltage and electric current.
- In order to prevent data leakage, please use the Secure Erase function to clear data before discarding your SSD device.

Preventive and Cautionary Tips

Before connecting and operating your device, please be advised of the following tips:

- The device is designed for indoor use only. Install it in a well-ventilated, dust-free environment without liquids.
- Ensure recorder is properly secured to a rack or shelf. Major shocks or jolts to the recorder as a result of dropping it may cause damage to the sensitive electronics within the recorder.
- The device shall not be exposed to water dripping or splashing, and no objects filled with liquids, such as vases, shall be placed on the device.
- No naked flame sources, such as lighted candles, should be placed on the device.
- The ventilation should not be impeded by covering the ventilation openings with items, such as newspapers, table-cloths, curtains, etc. The openings shall never be blocked by placing the equipment on a bed, sofa, rug or other similar surface.
- For certain models, ensure correct wiring of the terminals for connection to an AC mains supply.
- For certain models, the equipment has been designed, when required, modified for connection to an IT power distribution system.
- (+ identifies the battery holder itself and identifies the positioning of the cell(s) inside the battery holder.
- + identifies the positive terminal(s) of equipment which is used with, or generates direct current.
 - identifies the negative terminal(s) of equipment which is used with, or generates direct current.
- If the device has been powered off or placed for a long time, its coin/button cell battery may run out power.
- When the coin/button cell battery runs out power, the system time would be incorrect, please contact the after-sales service to replace the battery.
- Keep a minimum 200 mm (7.87 inch) distance around the equipment for sufficient ventilation.
- For certain models, ensure correct wiring of the terminals for connection to an AC mains supply.
- Do not touch the sharp edges or corners.
- When the device is running above 45 °C (113 °F), or its HDD temperature in S.M.A.R.T. exceeds the stated value, please ensure the device is running in a cool environment, or replace HDD(s) to make the HDD temperature in S.M.A.R.T. below the stated value.
- Provide a surge suppressor at the inlet opening of the device under special conditions such as the mountain top, iron tower, and forest.
- Do not touch the bare components (such as the metal contacts of the inlets) and wait for at least 5 minutes, since electricity may still exist after the device is powered off.
- The USB port of the equipment is used for connecting to a mouse, keyboard, USB flash drive, or Wi-Fi dongle only. The current for the connected device shall be not more than 0.1 A.
- The serial port of the device is used for debugging only.
- If the power output port of the device does not comply with Limited Power Source, the connected device powered by this port shall be equipped with a fire enclosure.
- If a power adapter is provided in the device package, use the provided adapter only.

- For the device with sticker \wedge or \wedge , pay attention to the following cautions: CAUTION: Hot parts! Do not touch. Burned fingers when handling the parts. Wait one-half hour after switching off before handling the parts.
- If the device needs to be installed on the wall or ceiling,
 - 1. Install the device according to the instructions in this manual.
 - 2. To prevent injury, this device must be securely attached to the installation surface in accordance with the installation instructions.
- Under high working temperature (40 °C (104 °F) to 55 °C (131 °F)), the power of some power adapters may decrease.
- Make sure that the power has been disconnected before you wire, install, or disassemble the device.
- If the device needs to be wired by yourself, select the corresponding wire to supply power
 according to the electric parameters labeled on the device. Strip off wire with a standard wire
 stripper at corresponding position. To avoid serious consequences, the length of stripped wire
 shall be appropriate, and conductors shall not be exposed.
- If smoke, odor, or noise arises from the device, immediately turn off the power, unplug the power cable, and contact the service center.

HDD Installation

If your device does not support HDD hot swapping, disconnect the power from the device before installing a hard disk drive (HDD). A factory recommended HDD should be used for this installation.

Bracket Installation

Bracket installation is applicable when it requires to remove the device cover, and install HDD on the internal bracket.

Steps

1. Unfasten screws on the back, and push the cover backwards to remove the cover.

Figure 1-1 Remove Cover

2. Fix the HDD on the bracket with screws.

iNote

Please uninstall the upper layer bracket first before installing HDD on the lower layer bracket.

Figure 1-2 Fix HDD

3. Connect the data cable and power cable.

Figure 1-3 Connect Cable

i Note

You can repeat the steps above to install other HDDs.

4. Reinstall the device cover and fasten screws.

Front Panel Plug-Pull Installation

Front panel plug-pull installation is applicable when you need to open the device front panel with key and install the HDD.

Steps

1. Fix mounting ears to HDD with screws.

Figure 1-4 Fix Mounting Ears to HDD

2. Unlock the front panel with the attached key, and press the buttons on both sides of the front panel to open it.

Figure 1-5 Open Front Panel

3. Insert the HDD until it is fixed firmly.

Figure 1-6 Insert HDD

- **4. Optional:** Repeat the steps above to install other HDDs.
- 5. Close the front panel and lock it with key.

Fix-on-Bottom Installation

Fix-on-bottom installation is applicable when you need to install and fix the HDD on the device bottom.

Steps

1. Remove the cover from device by unfastening the screws on panels.

Figure 1-7 Remove Cover

- **2.** Connect the data cable and power cable.
 - 1) Connect one end of data cable to the device motherboard.

- 2) Connect the other end of data cable to HDD.
- 3) Connect one end of power cable to HDD.
- 4) Connect the other end of power cable to the device motherboard.

Figure 1-8 Connect Cables

3. Set the device up, match HDD screw threads with the reserved holes on the device bottom, and fix HDD with screws.

Figure 1-9 Fix HDD to Device Bottom

- **4. Optional:** Repeat the steps above to install other HDDs.
- **5.** Reinstall the device cover and fasten screws.

Coin/Button Cell Battery Replacement

The coin/button cell battery should be replaced when the device has been powered off or placed for a long time, and the system time is incorrect.

Before You Start

Power off your device.

Steps

- 1. Remove the device chassis cover.
- 2. Find the coin/button cell battery on motherboard.
- **3.** Use tweezers to push the metal latch at the middle from its inside, and the battery would automatically pop up.

Figure 1-10 Remove Battery

4. Take out the old battery and press a new battery with the same model in to the battery slot.

The battery positive terminal (+ identifies the positive terminal) should be placed upward.

Figure 1-11 Replace Battery

5. Reinstall the device chassis cover.

What to do next

If the system time is incorrect, please go to configure the time.

Chapter 1 Startup

1.1 Activate Your Device

For the first-time access, you need to activate the video recorder by setting an admin password. No operation is allowed before activation. You can also activate the video recorder via web browser, SADP or client software.

Before You Start

- · Power on your device.
- For the first-time access, if you do not move the mouse on the interface for one minute, the resolution will be set as 1280*720/60Hz (720P) automatically.

Steps

- 1. Select a language.
- 2. Click Apply.
- 3. Input the same password in Password and Confirm Password.

Figure 1-1 Activation

 Strong Password recommended-We highly recommend you create a strong password of your own choosing according to the following rules in order to increase the security of your product:

- 8 to 16 characters.
- Do not contain the following characters in the password: the user name, 123, admin, no less than 4-digit continuously increasing or decreasing numbers, or no less than 4 continuously same characters.
- At least 2 of the following types are required: digits, upper-case letters, lower-case letters, and special characters.
- Risky password is not allowed.
- We recommend you reset your password regularly, especially in the high security system, resetting the password monthly or weekly can better protect your product.

4. Optional: Set Password Hint.

When you forget your password, the hint will help you remember it. It is recommended to set the password hint.

- 5. Optional: Set Unlock Pattern.
 - 1) Enable Unlock Pattern.
 - 2) Use the mouse to draw a pattern among the 9 dots on the screen. Release the mouse when the pattern is done.

- The pattern shall have 4 dots at least.
- Each dot can be connected for once only.
- 3) Draw the same pattern again to confirm it. When the two patterns match, the pattern is configured successfully.
- 6. Click Activate.
- **7. Optional:** Click **Auto** to automatically configure all the parameters in the wizard.

What to do next

Follow the wizard to set basic parameters.

- For basic system parameters. Refer to *General* for details.
- For general network parameters. Refer to **General** for details.
- For storage device configuration. Refer to **Storage Device** for details.
- For adding network cameras. Refer to Network Camera for details.
- For platform configuration. Refer *Hik-Connect* to for details.
- When you forget your password, there are three methods to reset it, including password
 resetting email, Hik-Connect, and security questions. You can configure the password resetting
 method. Refer to <u>Set Password Resetting Email</u> and <u>Hik-Connect</u> for details. If you do not set
 any methods, the auto login window will pop up. If you click **Yes**, you can log in without
 password.

1.2 Login

1.2.1 Log in via Unlock Pattern

Steps

1. Right click the mouse to select **Menu** or left click the mouse on live view.

Figure 1-2 Draw the Unlock Pattern

2. Draw the pre-defined pattern to enter the menu operation.

- If you have forgotten your pattern, you click **Forgot My Pattern** or **Switch User** to log in via password.
- If you have drawn the wrong pattern for more than 5 times, the system will switch to the normal login mode automatically.

1.2.2 Log in via Password

If your video recorder has logged out, you must log in before operating the menu and other functions.

Steps

1. Select User Name.

Figure 1-3 Login Interface

- 2. Input password.
- 3. Click Login.

iNote

- When you forget the password of the admin, you can click **Forgot Password** to reset the password.
- If you enter the wrong password 7 times, the current user account will be locked for 60 seconds.
- If you check **Auto Login**, you can log in without password.

Chapter 2 Live View

2.1 GUI Introduction

• Click **Target Detection** at the upper-left corner, and select or to display the specified live target detection results. For result details, click **View More**.

- Target Detection is only available for certain models.
- Target Detection is valid when HDD is installed.
- **2** is valid for motion detection, line crossing detection, intrusion detection, and face capture.
- Click to start/stop auto-switch. The screen will automatically switch to the next one.
- Click M to enter full screen mode.
- Double click a camera to view it in single-screen mode. Double click again to exit single-screen mode.
- Change a camera live view screen by dragging it from its screen to the desired screen.
- Scroll up/down to turn to previous/next screen.
- Position the cursor on a camera to show shortcut menu.

Figure 2-1 Shortcut Menu

Table 2-1 Shortcut Menu Description

Button	Description	
9	Start playing videos recorded in the latest five minutes.	
⊕	Digital zoom. You can adjust zoom-in times and view the desired area.	
오	Click it to enter PTZ control mode.	
89	Turn on/off live view audio.	
3	Switch video stream.	

• In the live view interface, there are icons at the upper-right corner of the screen for each camera, showing the camera recording and alarm status.

Table 2-2 Live View Icon Description

Icon Description	
>	Alarming (normal event and smart event).
8	Recording.

• Right click your mouse to display the shortcut menu.

Figure 2-2 Right Click Shortcut Menu

2.2 PTZ Control

2.2.1 Configure PTZ Parameter

You shall configure PTZ parameters before controlling a PTZ camera.

Steps

1. Preview a camera in live view and click **2** on shortcut menu.

Figure 2-3 PTZ Settings

- 2. Click 🐯 .
- **3.** Set the PTZ camera parameters.

iNote

All parameters should be the same as the PTZ camera.

4. Click OK.

2.2.2 PTZ Control Panel Introduction

Table 2-3 PTZ Panel Description

Icon	Description
· · · ·	Direction buttons, and the auto-cycle button.
Slow — Fast	The speed of the PTZ movement.
a / d	Zoom -/+.
	Focus -/+.
∅	Iris -/+.

2.2.3 Customize Preset

Set a preset location where the PTZ camera would point to when an event occurs.

Steps

- 1. Preview a camera in live view and click R on shortcut menu.
- 2. Select a desired preset in preset list.
- **3.** Use direction buttons to wheel the camera to required locations. Adjust zoom and focus as your desire.
- 4. Click 💌 .

What to do next

Double click a preset in the preset list to call it.

2.2.4 Customize Patrol

Patrol refers to a path consists of a series of presets with designated sequence. It provides dynamic live image for monitoring several presets.

Steps

1. Preview a camera in live view and click on R shortcut menu.

- 2. Click Patrol.

- **5.** Configure key point parameters, such as the key point No., duration of staying for one key point and speed of patrol. The key point is corresponding to the preset. The preset number determines the order at which the PTZ will follow while cycling through the patrol. **Duration** refers to the time span to stay at the corresponding key point. **Speed** defines the speed at which the PTZ will move from one key point to the next.

Figure 2-4 Patrol Settings

- 6. Click OK.
- 7. Click Save.

What to do next

Select a patrol and click **to** call it. The PTZ camera will move according the predefined patrol path.

2.2.5 Customize Pattern

A pattern records the movement path and dwell time in a certain position. When you call a pattern, the PTZ camera will move according to the recorded path.

Steps

- 1. Preview a camera in live view and click R on shortcut menu.
- 2. Click Pattern.
- 3. Select a pattern.
- 4. Click .
- **5.** Use direction buttons to wheel the camera to required locations. Adjust zoom and focus as your desire.
- **6.** Click . The previous PTZ camera moving path is recorded as a pattern.

What to do next

Select a pattern and click ot to call it. The PTZ camera will move according the predefined pattern.

Chapter 3 Playback

3.1 GUI Introduction

Go to Playback.

Figure 3-1 Playback

Table 3-1 Playback Interface Description

Button	Operation	Button	Operation
9	30 s reverse.	©	30 s forward.
50	Full screen.	▶	Start playback.
বব	Speed down.	DD	Speed up.
X 1	Speed.		

Figure 3-2 Timeline

- Position the cursor on the timeline, drag the timeline to position to a certain time.
- Period marked with blue bar contains video. Red bar indicates the video in the period is event video.
- Scroll up/down to zoom out/in timeline.

3.2 Normal Playback

Play back normal videos.

Steps

- 1. Go to Playback.
- 2. Select a camera from the camera list.
- 3. Select a date on the calendar for playback.

iNote

The blue triangle at the calendar date corner indicates there are available videos. For example, means video is available. III means no video.

Figure 3-3 Normal Playback

4. Optional: Position the cursor on playback window to show control bar.

Figure 3-4 Control Bar

Table 3-2 Button Description

Button	Description	Button	Description
НД	Adjust definition.	⊕	Zoom in/out playback image.
29	Turn on/off audio.	П	Add tag.
А	Lock/unlock video.	*	Clip video.

3.3 Event Playback

When you select the event playback mode, the system will analyze and mark videos that contain the motion detection, line crossing detection, or intrusion detection information, .

Before You Start

- Ensure the camera has enabled **Dual-VCA**. You can enable it via the camera web browser interface in **Configuration** → **Video/Audio** → **Display Info. on Stream**.
- Ensure your video recorder has enabled **Save Camera VCA Data**. You can enable it in **Configuration** → **Record** → **Advanced** .

Steps

- 1. Go to Playback.
- 2. Click Event.
- 3. Select a camera.
- **4.** Position the cursor on playback window to show control bar.

Table 3-3 Button Description

Button	Description	Button	Description
	Add tag.	Θ	Zoom in/out playback image.
*	Clip video.	А	Lock/unlock video.
Ω	Configure detection area.	తు	Turn on/off audio.

- **5.** Click **1** to set detection areas of line crossing detection, intrusion detection, or motion detection.
- **6.** Click **1** to search videos. Videos meet the detection rule requirement will be marked in red.
- 7. Click to configure the play strategy.

Skip Normal Videos

If it is enabled, videos without smart information will not be played.

Normal Video

Set normal video playback speed. The option is only valid when **Do not Play Normal Videos** is unchecked.

Play Speed of Smart/Custom Video

Set playback speed of videos with smart information. The option is only valid when **Do not Play Normal Videos** is enabled.

3.4 Back up Clip

You can clip videos during playback. Video clips can be exported to the backup device (USB flash drive, etc.).

Before You Start

Connect a backup device to your video recorder.

Steps

- 1. Start playback. Refer to Normal Playback for details.
- 2. Click 💥 .
- 3. Set the start and end time.
- 4. Click Save.
- 5. Select the backup device and folder.
- **6.** Click **Save** to export the clip to backup device.

3.5 Backup Device Playback

You can replay the videos which are stored in the backup device (USB flash drives, USB HDDs, USB writer, SATA writer, etc.).

Before You Start

Please make sure the videos are exported from your video recorder and the format is MP4.

Steps

- 1. Connect a backup device to your video recorder.
- 2. Click on the playback interface.
- 3. Click or double click the video.

Chapter 4 Search File

Steps

- 1. Go to Search.
- 2. Select a search type (video, picture, event, etc.).
- 3. Set search conditions.
- 4. Optional: Click Quick Backup to quickly export videos to the device.

Quick backup is available for video and event search.

- 5. Click Search.
 - Click at to lock the file. Locked file will not be overwritten.
 - Select file(s), and click **Export** to export file(s) to backup device.

4.1 Search Human by Face Picture

You can search human records by the provided face picture.

Before You Start

Ensure you have enabled face picture comparison.

Steps

1. Go to Search → Human .

Figure 4-1 Search Human by Face Picture

- 2. Set Search Method by By Picture.
- **3.** Upload a face picture.
 - Click **Upload from Local** to upload a face picture from a local storage device, such as USB flash drive
 - Click **Upload from Face Picture Library** to upload a face picture from a face picture library.

iNote

- Only JPG and JPEG formats are supported.
- Each picture size should be less than 1 MB.
- The picture resolution shall be between 80×80 and 1920×1080 .
- 4. Set the start time and end time.
- 5. Set Similarity.

Similarity

Similarity value ranges from 0 to 100. Device will analyze the similarity between the detected face picture and face pictures in the library. When the similarity reaches the threshold value, the face picture comparison succeeded, and the face picture is recognized.

6. Click Search.

4.2 Quick Backup

Before You Start

Connect a backup device to your video recorder.

Steps

- 1. Go to Search.
- **2.** Set search conditions.
- 3. Click Quick Export.
- 4. Select backup device and path.
- **5.** Click **OK** to start exporting.

Chapter 5 Configuration (Easy Mode)

Easy mode contains basic configurations. Go to Configuration, and click Easy Mode.

5.1 System Configuration

5.1.1 General

You can configure the output resolution, system time, etc.

Steps

- 1. Go to Configuration → System → General .
- 2. Configure the parameters as your desire.

Wizard

The wizard will pop up after the device starts up.

Local Auto Login

You can log in without password.

NTP Time Sync

Network time protocol (NTP) is a networking protocol for time synchronization. The device can connect to NTP (network time protocol) server to sync time.

Interval (min)

Time interval between two time synchronization with NTP server.

NTP Server

IP address of the NTP server.

3. Click Apply.

5.1.2 User

Add User

There is a default account: Administrator. The administrator user name is **admin**. Administrator has the permission to add, delete, and edit user. Guest user only has live view, playback, and log search permission.

Steps

- 1. Go to Configuration → System → User .
- 2. Click Add and confirm your admin password.

Figure 5-1 Add User

- 3. Enter user name.
- 4. Enter the same password in Create Password and Confirm.

We highly recommend you create a strong password of your own choosing (Using a minimum of 8 characters, including at least two of the following categories: digits, upper-case letters, lower-case letters, and special characters.) in order to increase the security of your product. And we recommend you reset your password regularly, especially in the high security system, resetting the password monthly or weekly can better protect your product.

- **5.** Set **Local Permission**, **Remote Permission** and **Camera Permission** according to the actual needs.
- 6. Click OK.
 - Click **∠** / **□** to edit/delete user.

Set Password Resetting Email

When you forgot your login pattern and password, the device will send an email contains verification code to your email for password resetting.

Steps

- 1. Go to Configuration → System → User.
- 2. Click Password Resetting Email.
- 3. Enter admin password for authorization.
- 4. Enter an email address.
- 5. Click OK.

Reset Password

You can reset your password when you forgot your login pattern and password.

Steps

- 1. Click Forgot Password at the password login interface.
- 2. Click Next if you agree the Privacy Policy, you can scan the QR code to read it.
- 3. Follow the wizard to reset password.

5.1.3 Exception

You can receive exception events hint in alarm center, and set exception linkage actions.

Steps

- 1. Go to Configuration → System → Exception .
- 2. Optional: Configure event hint. When the set events occur, you will receive hints in alarm center.
 - 1) Enable Event Hint.
 - 2) Click at the upper-right corner of local menu to enter alarm center.
 - 3) Select an event type.
 - 4) Click **Set** to select events to hint.
- 3. Set Exception Type
- 4. Select Normal Linkage and Trigger Alarm Output type for exception linkage actions.

Figure 5-2 Exceptions

5. Click Apply.

5.2 Network Configuration

5.2.1 General

You shall properly configure the network settings before operating the device over network.

Steps

1. Go to Configuration → Network → General .

Figure 5-3 Network

2. Set network parameters.

DHCP

If the DHCP server is available, you can enable **DHCP** to automatically obtain an IP address and other network settings from that server.

Auto Obtain DNS

If **DHCP** is enabled. You can enable **Auto Obtain DNS** to automatically obtain **Preferred DNS Server** and **Alternate DNS Server**.

3. Click Apply.

5.2.2 Hik-Connect

Hik-Connect provides mobile phone application and platform service to access and manage your connected devices, which enables you to get a convenient remote access to the video security system.

Steps

- 1. Go to Configuration → Network → Hik-Connect.
- 2. Turn on Enable. The service terms will pop up.
 - 1) Read the service terms and privacy statement.
 - 2) Check I have read and agree to Service Terms and Privacy Statement. if you agree with the service terms and privacy statement.
 - 3) Click **OK**.
- **3.** Click **∠** to set verification code.

- **4. Optional:** Enable **Platform Time Sync**, the device will sync time with the platform server instead of NTP server.
- **5. Optional:** Enable **Stream Encryption**. It requires to enter verification code in remote access and live view after this function is enabled.
- 6. Optional: Edit Server IP.
- **7. Optional:** Enable **Sub-Stream Self-Adaptive Bitrate**. When the network environment is poor, the device would automatically adjust video bitrate to ensure playing fluency.
- 8. Bind your device with a Hik-Connect account.
 - 1) Use a smart phone to scan the QR code, and download Hik-Connect app. You can also download it from https://appstore.hikvision.com, or the QR code below. Refer to Hik-Connect Mobile Client User Manual for details.

Figure 5-4 Download Hik-Connect

2) Use Hik-Connect to scan the device QR, and bind the device.

- If the device is already bound with an account, you can click **Unbind** to unbind with the current account.
- You can also use the QR code in \blacksquare at the upper-left corner to download Hik-Connect and bind your device.
- 9. Click Apply.

Result

- If your device is connected with Hik-Connect platform, Connection Status will be Online.
- If your device is bound with a Hik-Connect account, **Bind Status** will be **Yes**.

What to do next

You can access your video recorder via Hik-Connect.

5.2.3 Email

Set an email account to receive event notification.

Before You Start

- Ensure SMTP service is available for your email.
- Configure your network parameters. Refer to **General** for details.

Steps

1. Go to Configuration → Network → Email .

Figure 5-5 Email

2. Set email parameters

Server Authentication

Check it to enable the server authentication feature.

User Name

The user account of email sender for SMTP server authentication.

Password

The password of email sender for SMTP server authentication.

SMTP Server/SMTP Port

After selecting the **SMTP Sever**, its address and port will be showed automatically. You can also edit them according to actual needs.

SSL/TLS

(Optional) Enable SSL/TLS if it is required by the SMTP server.

Attached Picture

(Optional) If events are triggered, it will send images as email attachment.

Sender

The sender name.

Sender's Address

The sender's email address.

Select Receiver

Select a receiver. Up to 3 receivers are available.

Receiver

The receiver name.

Receiver's Address

The receiver's email address.

 $\bigcap_{\mathbf{i}}$ Note

For network cameras, the event images are directly sent as the email attachment. One network camera only sends one picture.

- 3. Optional: Click Test to send a test email.
- 4. Click Apply.

5.3 Camera Management

5.3.1 Network Camera

Configure Signal Input

For certain digital video recorder models, you can configure the analog and IP signal input types.

Steps

- **1.** Go to Configuration \rightarrow Camera \rightarrow Analog \rightarrow Analog.
- 2. Select signal input type as **HD/CVBS** or **IP** for each channel.

HD/CVBS

Four types of analog signal inputs including Turbo HD, AHD, HDCVI, and CVBS can be connected randomly for the channel.

ΙP

Network camera can be connected for the channel.

Figure 5-6 Signal Input Type

3. Click **Apply**. You can view the maximum network camera accessible number in **Max. IP Camera Number**.

Add Network Camera by Device Password

Add network cameras which the password is the same as your video recorder.

Before You Start

- Ensure your network camera is on the same network segment with your video recorder.
- Ensure the network connection is valid and correct. Refer to *General* for details.
- Ensure the network camera password is the same as your video recorder.

Steps

- 1. Go to Configuration → Camera → IP Camera . The online cameras on the same network segment with your video recorder are displayed in Online Device List.
- 2. Select a desired network camera.
- 3. Click **II** to add the camera.

If the camera is inactive, the device will activate it automatically with the password you have set during device activation.

4. Optional: If your network camera is not on the same network segment with the DVR and supports ONVIF protocol, click **Advanced Search** and fill in the first three octets of the camera IP address to add the camera(s).

Add Network Camera Manually

Before You Start

- Ensure your network camera is on the same network segment with that of your video recorder.
- Ensure the network connection is valid and correct.
- Ensure the network camera is activated.

Steps

- **1.** Go to Configuration \rightarrow Camera \rightarrow IP Camera .
- 2. Click III in Added Device List.
- 3. Set network camera parameters, including IP address, protocol, management port, etc.
- 4. Optional: Double click Camera Name to edit name.

Camera name can be edited only when the camera status is online.

- **5. Optional:** Enable **Use Camera Activation Password** to use the device password to add network camera(s).
- 6. Optional: Click Add More to add another network camera.
- 7. Click Add.

Figure 5-7 Add Network Camera

Edit Connected Network Camera

You can edit the IP address, protocol and other parameters of the added network cameras.

Steps

- 1. Go to Configuration → Camera → IP Camera .
- 2. Click ∠ to edit the selected camera.

Channel Port

If the connected device is an encoding device with multiple channels, you can select the channel port No. to choose a connecting channel.

3. Click OK.

5.3.2 Motion

Motion enables the video recorder to detect the moving objects in the monitored area and trigger alarms.

Steps

- 1. Go to Configuration → Camera → Motion .
- 2. Select a camera.
- 3. Check Enable.
- 4. Set the motion area: Click Draw Area or Clear to draw or clear areas.

The operation may differ according to different models.

- **5.** Adjust **Sensitivity**. Sensitivity allows you to calibrate how readily movement triggers the alarm. A higher value results in the more readily to triggers motion.
- 6. Set analysis mode as AI or PIR.

ΑI

The motion event will be analyzed by your device.

PIR

The motion event will be analyzed by certain analog PIR cameras.

- **7. Optional:** Set **Detection Target** as **Human** or **Vehicle** to discard alarms which are not triggered by human or vehicle.
- 8. Set the arming schedule. Refer to *Configure Arming Schedule* for details.
- 9. Set the linkage actions. Refer to *Configure Alarm Linkage Action* for details.
- 10. Click Apply.

5.3.3 OSD Settings

Configure OSD (On-Screen Display) settings for the camera, including date format, camera name, etc.

Steps

- 1. Go to Configuration \rightarrow Camera \rightarrow OSD.
- 2. Select a camera.

Figure 5-8 OSD

- **3.** Set parameters as your desire.
- **4.** Drag the text frames on the preview window to adjust the OSD position.
- 5. Click Apply.

5.4 Configure Alarm Linkage Action

Alarm linkage actions will be activated when an alarm or exception occurs.

Steps

1. Click Linkage Action.

Figure 5-9 Linkage Actions

2. Set normal linkage actions, alarm output linkage actions, trigger channel, etc.

Alarm Pop-up Window

The local monitor will pop up the alarming channel image when an alarm is triggered. It requires to select the alarming channel(s) in **Trigger Channel**.

Buzzer Alarm

It will trigger a buzzer beep when an alarm is triggered.

Notify Surveillance Center

The device will send an exception or alarm signal to the remote client software when an alarm is triggered.

Send Email

It will send an email with alarm information when an alarm is triggered.

PTZ Linkage

It will trigger PTZ actions (e.g., call preset/patrol/pattern) when smart events occur.

Audio and Light Alarm Linkage

For certain network cameras, you can set the alarm linkage action as audio alarm or light alarm.

- Ensure your camera supports audio and light alarm linkage.
- Ensure the audio output and volume are properly configured.
- If you require to set audio and light parameters, please log into the network camera via web browser to configure them.
- 3. Click Apply.

5.5 Configure Arming Schedule

Steps

1. Select Arming Schedule.

2. Choose one day of a week and set the time segment. Up to eight time periods can be set within each day.

 \bigcap i Note

Time periods shall not be repeated or overlapped.

Figure 5-10 Set Arming Schedule

3. Click Apply.

5.6 Recording Management

5.6.1 Storage Device

Initialize HDD

A newly installed hard disk drive (HDD) must be initialized before it can be used to save videos and information.

Before You Start

Install at least an HDD to your video recorder. For detailed steps, refer to Quick Start Guide.

Steps

- 1. Go to Configuration → Record → Storage .
- 2. Select an HDD.
- 3. Click Init.

Repair Database

Repair an HDD that with error in database. Please operate it with the help of professional technical support.

Secure Erase

Secure Erase will delete videos in the selected disk(s).

Add Network Disk

You can add the allocated NAS or IP SAN disk to the video recorder, and use it as a network HDD.

Steps

- 1. Go to Configuration → Record → Storage .
- 2. Click Add.
- 3. Select NetHDD.
- 4. Set Type as NAS or IP SAN.
- 5. Enter NetHDD IP address.
- **6.** Click **a** to search the available disks.

Figure 5-11 Add NetHDD

- **7.** Select NAS disk from the list, or manually enter the directory in **NetHDD Directory**.
- 8. Click OK. The added NetHDD will be displayed in the storage device list.

5.6.2 Configure Recording Schedule

Video recorder will automatically start/stop recording according to the configured schedule.

Configure Continuous Recording

Steps

- 1. Go to Configuration → Record → Parameter.
- **2.** Set the continuous main stream/sub-stream recording parameters for the camera. Refer to *Configure Recording Parameter* for details.
- 3. Go to Configuration → Record → Schedule.
- 4. Select recording type as Continuous. Refer to Edit Schedule for details.

Configure Event Recording

You can configure the recording triggered by the motion detection, line crossing detection, and intrusion detection.

Steps

- 1. Go to Configuration → Event .
- **2.** Configure the event detection and select the channels to trigger the recording when an event occurs.
- 3. Go to Configuration → Record → Parameter .
- **4.** Set the continuous main stream/sub-stream recording parameters for the camera. Refer to *Configure Recording Parameter* for details.
- 5. Go to Configuration → Record → Schedule.
- 6. Select recording type as Event. Refer to Edit Schedule for details.

Edit Schedule

Steps

1. Go to Configuration → Record → Schedule.

Figure 5-12 Recording Schedule

Continuous

Continuous recording.

Event

Recording is triggered by events.

- 2. Select a camera in Camera No.
- 3. Turn on Enable.
- 4. Configure the recording schedule.

Edit

a. Click Edit.

Schedule

- b. Select a day to configure in Weekday.
- c. To set an all-day recording schedule, check All Day and select schedule type.
- d. To set other schedules, uncheck **All Day**, and set **Start/End Time** and schedule type.

Up to 8 periods can be configured for each day. And the time periods cannot be overlapped with each other.

e. Click **OK** to save the settings and go back to upper level menu.

Draw

a. Click to select schedule type as **Continuous** or **Event**.

Schedule

b. On the table, drag the mouse on the desired period to draw a colored bar.

5. Click Apply.

5.6.3 Configure Recording Parameter

Steps

1. Go to Configuration → Record → Parameter .

2. Configure recording parameters.

Main Stream

Main stream refers to the primary stream that affects data recorded to the hard disk drive and will directly determine your video quality and image size. Comparing with the substream, the main stream provides a higher quality video with higher resolution and frame rate.

Sub-Stream

Sub-stream is a second codec that runs alongside the mainstream. It allows you to reduce the outgoing internet bandwidth without sacrificing your direct recording quality. Sub-stream is often exclusively used by smartphone applications to view live video. Users with limited internet speeds may benefit most from this setting.

Frame Rate

Frame rate refers to how many frames are captured each second. A higher frame rate is advantageous when there is movement in the video stream, as it maintains image quality throughout.

Resolution

Image resolution is a measure of how much detail a digital image can hold: the greater the resolution, the greater the level of detail. Resolution can be specified as the number of pixel-columns (width) by the number of pixel-rows (height), e.g.,1024×768.

Bitrate

The bit rate (in Kbit/s or Mbit/s) is often referred to as speed, but actually defines the number of bits/time unit and not distance/time unit.

 \square_{Note}

Higher resolution, frame rate, and bitrate provide you better video quality, but it also requires more internet bandwidth and uses more storage space on the hard disk drive.

3. Click Apply.

Chapter 6 Configuration (Expert Mode)

Go to **Configuration**, and click **Expert Mode** at the lower-left corner.

6.1 System Configuration

6.1.1 General

Configure Basic Settings

You can configure the language, system time, output resolution, mouse pointer speed, lock screen password, etc.

Go to **Configuration** → **System** → **General** → **Basic Settings**, configure the parameters as your desire, and click **Apply**.

Language

The default language is **English**.

VGA/HDMI Resolution

Select the output resolution, which must be the same with the resolution of the VGA/HDMI display.

Video Quality Mode

The default mode is standard.

Local Auto Login

You can log in without password.

Mouse Pointer Speed

Set the speed of mouse pointer. 4 levels are configurable.

Wizard

The wizard will pop up after the device starts up.

Configure DST Settings

DST (Daylight Saving Time) refers to the period of the year when clocks are moved one period ahead. In some areas worldwide, this has the effect of creating more sunlit hours in the evening during months when the weather is the warmest.

Go to **Configuration** → **System** → **General** → **DST Settings** , configure the parameters as your desire, and click **Apply**.

Configure More Settings

You can configure your device name, lock screen time, output mode, etc.

Go to **Configuration** → **System** → **General** → **More Settings** , configure the parameters as your desire, and click **Apply**.

Device Name

Edit the video recorder name.

Device No.

The number is required in the connection with remote control, network keyboard, etc. Edit the serial number of video recorder. The device number ranges from 1 to 255, and the default value is 255.

Lock Screen

Set timeout time for lock screen.

Menu Output Mode

Choose output to display local menu.

Enhanced IP Mode

Enabling enhanced IP mode will allow you to connect to the maximum number of cameras, but disable 2K/4K output resolution, and make perimeter protection, human or vehicle detection of motion, face capture and face picture comparison functions unavailable in analog channel.

6.1.2 Live View

Configure General Parameters

You can configure the output interface, mute or turning on the audio, event output interface, etc.

Steps

1. Go to Configuration → System → Live View → General.

Figure 6-1 Live View-General

2. Configure the Live View parameters.

Window Division

Select the live view window division.

Auto Switch Interval

The time to dwell in a camera before switching to next camera when auto-switch in live view is enabled.

Alarm Pop-up Output

Select the output to show alarm video.

Alarm Pop-up Delay

Set the time to show alarm event image.

Audio

Turn on/off audio output for the selected video output.

Volume

Adjust the live view, playback, and two-way audio volume for the selected video output interface.

3. Click Apply.

Configure Live View Layout

Steps

- 1. Go to Configuration → System → Live View → View .
- 2. Set Output Interface.

- **3.** Select a window, and double click a camera the list you would like to display. **+** means no camera is displayed on the window.
- **4. Optional:** Click or to start or stop live view of all cameras.
- 5. Click Apply.

Configure Channel-Zero Encoding

Enable the channel-zero encoding when you need to get a remote view of many channels in real time from a web browser or CMS (Client Management System) software, in order to decrease the bandwidth requirement without affecting the image quality.

Steps

1. Go to Configuration → System → Live View → Channel-Zero .

Figure 6-2 Channel-Zero

- 2. Turn on Enable.
- **3.** Configure **Frame Rate**, **Max. Bitrate Mode**, and **Max. Bitrate**. The higher frame rate and bitrate require higher bandwidth requirement.
- 4. Click Apply.

6.1.3 User

Refer to *User* for details.

6.2 Network Configuration

6.2.1 TCP/IP

TCP/IP must be properly configured before you operate video recorder over network.

Steps

- 1. Go to Configuration → Network → General → TCP/IP.
- 2. Configure network parameters.

Working Mode

Multi-address Mode

The parameters of the two NIC cards can be configured independently. You can select LAN1 or LAN2 in the NIC type field for parameter settings. You can select one NIC card as default route. And then the system is connecting with the extranet and the data will be forwarded through the default route.

Net-fault Tolerance Mode

The two NIC cards use the same IP address, and you can select the Main NIC to LAN1 or LAN2. By this way, in case of one NIC card failure, the video recorder will automatically enable the other standby NIC card so as to ensure the normal running of the whole system.

Load Balance Mode

By using the same IP address and two NIC cards share the load of the total bandwidth, which enables the system to provide two Gigabit network capacity.

Working mode is only available for certain models.

NIC Type

Select NIC type as your desire. If your device supports Wi-Fi dongle function, the NIC of Wi-Fi dongle would be selectable after a suitable Wi-Fi dongle is installed.

DHCP

If the DHCP server is available, you can check **Enable DHCP** to automatically obtain an IP address and other network settings from that server.

MTU

The maximum transmission unit (MTU) is the size of the largest network layer protocol data unit that can be communicated in a single network transaction.

Default Route

Select a route as your desire. If your device supports Wi-Fi dongle function, the route of Wi-Fi dongle would be selectable after a suitable Wi-Fi dongle is installed.

Auto Obtain DNS

If **DHCP** is checked. You can check **Obtain DNS Automatically** to obtain **Preferred DNS Server** and **Alternate DNS Server**.

3. Click Apply.

6.2.2 DDNS

Dynamic domain name server (DDNS) maps dynamic user IP addresses to a fixed domain name server.

Before You Start

Register DynDNS, PeanutHull and NO-IP services with your ISP.

Steps

1. Go to Configuration → Network → General → DDNS.

Figure 6-3 DDNS

- 2. Turn on Enable.
- 3. Select a DDNS type.
- **4.** Enter parameters including service address, domain name, etc.
- 5. Click Apply.

What to do next

You can view DDNS status in Status.

6.2.3 PPPOE

If the device is going to connect to Internet through PPPOE, you need to configure user name and password accordingly. Contact your Internet service provider for details about PPPOE service.

Steps

1. Go to Network → General → PPPOE.

Figure 6-4 PPPOE

- 2. Turn on Enable.
- 3. Enter user name and password.
- 4. Click Save.

What to do next

If you can get the dynamic IP, the PPPOE status is normal.

6.2.4 NAT

Two ways are provided for port mapping to realize the remote access via the cross-segment network, UPnP™ and manual mapping.

Before You Start

Enable the UPnP™ function of your router if UPnP™ is required. When the device network working mode is multi-address, the default device route should be on the same network segment as the LAN IP address of the router.

Steps

1. Go to Configuration \rightarrow Network \rightarrow General \rightarrow NAT.

Figure 6-5 NAT

- 2. Turn on Enable.
- 3. Select Mapping Type as Manual or Auto

Auto The port mapping items are read-only, and the external ports are set by the router automatically. You can click **Refresh** to get the latest status of the port mapping.

Manual Select an external port type. Click

to edit External Port. You can use the default external port No., or change it according to actual requirements. External Port indicates the port No. for port mapping in the router.

The value of the RTSP port No. should be 554 or between 1024 and 65535, while the value of the other ports should be between 1 and 65535 and the value must be different from each other. If multiple devices are configured for the UPnP $^{\text{TM}}$ settings under the same router, the value of the port No. for each device should be unique.

4. Set the virtual server of your router, including internal source port, external source port, etc. The virtual server parameters shall be corresponding with your device port.

6.2.5 Wi-Fi

For certain models, after installing a Wi-Fi dongle to your device, the device would be able to connect to a wireless network, and the channels in your device can be viewed thorough Wi-Fi. For example, if your device is connected with several network cameras or analog cameras (Wi-Fi network cameras currently cannot be connected), after the device is connected to a wireless network, you would be able to access your device and view the connected channels through Wi-Fi.

Before You Start

- Prepare a suitable Wi-Fi dongle, and insert it in to the USB interface at the rear panel.
- Ensure your device support this function.

Steps

1. Go to Configuration → Network → General → Wi-Fi.

Note

The Wi-Fi setting interface will automatically pop up when you insert the Wi-Fi dongle for the first time.

2. Connect to a wireless network.

Connect to an Automatically Searched Wireless Network

- a. Double click the wireless network from the list as you desired.
- b. Set wireless network parameters.
- c. Click OK.

Connect to a Customized Wireless Network

- a. Click Custom Adding.
- b. Set wireless network parameters.
- c. Click **OK**.

Connect to a Wireless Network with WPS (Wi-Fi Protected Setup)

- a. Click **WPS Settings**.
- b. Check Enable WPS.
- c. Set wireless network parameters.
- d. Click Apply.

iNote

If you requires to edit or forget the network, double click the connected network, and edit it as your desire.

After connecting to an available wireless network, you can view the connection result in **Connection Status**.

- 3. Go to Configuration → Network → General → TCP/IP.
- 4. Set Select NIC and Default Route as WLANO.
- 5. Check Enable Wi-Fi.
- 6. Set other network parameters.
- 7. Click Apply.

6.2.6 NTP

Your device can connect to a network time protocol (NTP) server to ensure that the system time is accurate.

Steps

- 1. Go to Configuration \rightarrow Network \rightarrow General \rightarrow NTP.
- 2. Turn on Enable.
- **3.** Enter the parameters.

Interval

Time interval between two time synchronization with NTP server.

NTP Server

IP address of the NTP server.

4. Click Apply.

6.2.7 Log Server Settings

Upload Logs to the Server

You can upload system logs to the server for backup.

Steps

1. Go to Configuration → Network → General → Log Server Settings .

Figure 6-6 Log Server Settings

- 2. Turn on Enable
- 3. Set Upload Time Interval, Server IP Address, and Port.
- 4. Optional: Click Test to test if parameters are valid.
- 5. Click Apply.

One-Way Authentication

You can install a CA certificate (from the server) to your device to authorize the server via web browser. It would improve the log communication security.

Before You Start

- Download the CA certificate from the server.
- Ensure log server parameters are valid.

Steps

1. Go to Configuration → Network → Advanced Settings → Log Server Configuration .

Figure 6-7 One-Way Authentication

- 2. Install the CA certificate in CA Certificate.
- 3. Optional: Click Test to test if the connection is valid.
- 4. Click Save.

Two-Way Authentication

You can install a CA certificate (from the server) to your device to authorize the server, and create a certificate (from your device) to authorize your device by the server. This would improve the log communication security. Two-way authentication can be configured via web browser.

Before You Start

- Download the CA certificate from the server.
- Ensure log server parameters are valid.

Steps

1. Go to Configuration → Network → Advanced Settings → Log Server Configuration .

Figure 6-8 Two-Way Authentication

- 2. Install the CA certificate in CA Certificate.
- 3. Click Create in Client Certificate, and follow the pop-up to create the certificate.
- **4.** Click **Download** to download the certificate file to a desired location.
- **5.** Upload the downloaded certificate file to the server, and the server will return the certificate key.
- **6.** Open the certificate as a text file, and modify it by the certificate key as the server returned.
- 7. Install the modified certificate in Client Certificate.
- 8. Optional: Click Test to test if the connection is valid.
- 9. Click Save.

6.2.8 Ports (More Settings)

Set different port types to enable relevant functions as your desire.

Go to Configuration \rightarrow Network \rightarrow General \rightarrow More Settings.

Alarm Host IP/Port

The device will send the alarm event or exception message to the alarm host when an alarm is triggered. The remote alarm host must have the client management system (CMS) software installed.

Alarm Host IP refers to the IP address of the remote PC on which the CMS software (e.g., iVMS-4200) is installed, and the Alarm Host Port (7200 by default) must be the same as the alarm monitoring port configured in the software.

Server Port

For remote client software access. Ranges from 2000 to 65535. The default value is 8000.

HTTP Port

For remote web browser access. The default value is 80.

Multicast IP

Multicast can be configured to enable live view for cameras that exceed the maximum number allowed through network. A multicast IP address covers Class-D IP ranging from 224.0.0.0 to 239.255.255 and it is recommended to use the IP address ranging from 239.252.0.0 to 239.255.255.

When adding a device to the CMS software, the multicast address must be the same as that of the device.

RTSP Port

RTSP (Real Time Streaming Protocol) is a network control protocol designed for use in entertainment and communications systems to control streaming media servers. The port is 554 by default.

Output Bandwidth Limit

You can check the checkbox to enable output bandwidth limit.

Output Bandwidth

After enable the output bandwidth limit, input the output bandwidth.

- The output bandwidth limit is used for the remote live view and playback.
- The default output bandwidth is the maximum limit.

Figure 6-9 Port Settings

6.2.9 Hik-Connect

Go to Configuration \rightarrow Network \rightarrow Platform Access . Refer to <u>Hik-Connect</u> for details.

6.2.10 Email

Go to **Configuration** → **Network** → **Email** . Refer to **Email** for details.

6.3 Camera Management

6.3.1 Configure Signal Input

For certain digital video recorder models, you can configure the analog and IP signal input types.

Steps

- 1. Go to Configuration → Camera → Analog, or click Edit at the upper-right corner in Configuration → Camera → Camera.
- 2. Select signal input type as HD/CVBS or IP.

HD/CVBS

Four types of analog signal inputs including Turbo HD, AHD, HDCVI, and CVBS can be connected randomly for the channel.

ΙP

Network camera can be connected for the channel.

Figure 6-10 Signal Input Type

3. Click **Apply**. You can view the maximum network camera accessible number in **Max. IP Camera Number**.

6.3.2 Network Camera

Add Automatically Searched Online Network Camera

Add the network cameras to your video recorder.

Before You Start

- Ensure your network camera is on the same network segment with your video recorder.
- Ensure the network connection is valid and correct.
- Ensure the network camera password is the same as your video recorder.

Steps

- 1. Go to Configuration → Camera → Camera .
- 2. Click Online Device List. The online cameras on the same network segment will be displayed in the list.

Figure 6-11 Online Device

3. Optional: Click **Edit IP** to edit camera IP addresses in batch. The system will allocate IP addresses to the selected cameras in order.

- Ensure the selected cameras are activated.
- When the network camera is online, you can double click camera name to edit it.
- 4. Select a network camera, and click Add to add it.

Add Network Camera Manually

Add the network cameras to your video recorder.

Before You Start

- Ensure your network camera is on the same network segment with that of your video recorder.
- Ensure the network connection is valid and correct.
- Ensure the network camera is activated.

Steps

- 1. Go to Configuration → Camera → Camera .
- 2. Click 开 .

Figure 6-12 Add IP Camera

3. Enter network camera parameters.

Use Camera Activation Password

If it is enabled, the video recorder will add the camera by the set channel default password.

4. Click Add.

Add Network Camera on Different Network Segment

If your network camera is on a different network segment, the device can search its IP address within a range of IP addresses, and add it.

Before You Start

- Ensure the network connection is valid and correct.
- Ensure the network camera password is the same as your video recorder.

Steps

- 1. Go to Configuration \rightarrow Camera \rightarrow Camera \rightarrow IP Channel.
- 2. Click Advanced Search.
- 3. Enter Network Segment.

Figure 6-13 Enter Network Segment

4. Click Add.

Add Network Camera Through Plug-and-Play

If an inactive network camera or third party ONVIF camera is connected to your network, the video recorder may automatically detect and add the camera, or notify you to manually add it.

Steps

- 1. Go to Configuration \rightarrow Camera \rightarrow Camera \rightarrow IP Channel.
- 2. Click More.
- 3. Select Plug-and-Play.
- **4. Optional:** Enable **Auto Add Network Camera**. The video recorder would automatically detect and add the inactive network camera or third party ONVIF camera.

Figure 6-14 Auto Add Network Camera

If you turn off **Auto Add Network Camera**, when an inactive network camera or third party ONVIF camera is connected to your network, the video recorder would automatically detect it and notify you to add it.

Edit Network Camera

You can edit the IP address, protocol and other parameters of network cameras.

Steps

- 1. Go to Configuration → Camera → Camera .
- 2. Click **∠** of an added network camera.

Channel Port

If the connected device is an encoding device with multiple channels, you can choose the channel to connect by selecting the channel port No. in the drop-down list.

- **3. Optional:** Click **Edit IP** to edit camera IP addresses in batch. The system will allocate IP addresses to the selected cameras in order.
- 4. Click OK.

Upgrade Network Camera

The Network camera can be remotely upgraded through the device.

Before You Start

- Ensure you have inserted the USB flash drive to the device, and it contains the network camera upgrade firmware.
- Ensure your network camera is on the same network segment with your video recorder.
- Ensure the network connection is valid and correct.

Steps

- 1. Go to Configuration → Camera → Camera .
- 2. Click 4.
- 3. Click Yes to confirm.
- **4.** Select the camera upgrade firmware from your storage device.
- **5.** Click **Upgrade** to start upgrading. The camera will restarted automatically after upgrade completed.

Configure Advanced Camera Parameters

You can configure advanced camera parameters like camera IP address, camera password, etc.

Before You Start

- Ensure your network camera is on the same network segment with your video recorder.
- · Ensure the network connection is valid and correct.

Steps

- 1. Go to Configuration → Camera → Camera .
- 2. Click 🐯 .
- 3. Set camera parameters like IP address, camera password, etc.
- 4. Click Apply.

Import/Export IP Camera Configuration File

The information of added network camera can be generated into an excel file and exported to the local device for backup, including the IP address, port, password of admin, etc. And the exported file can be edited on your computer, like adding or deleting the content, and copy the setting to other devices by importing the excel file to it.

Before You Start

Connect a backup device, such as a USB flash drive, to your video recorder.

Steps

- 1. Go to Configuration → Camera → Camera .
- 2. Click More.
- 3. Click Export/Import to export/import configuration files to the connected backup device.
- 4. Set the storage device and folder path.
- 5. Click Export/Import.

What to do next

After the importing process is completed, you must restart the video recorder.

Advanced Settings

Steps

- 1. Go to Configuration → Camera → Camera .
- 2. Click More.
- 3. Configure the parameters as your desire.

H.265 Auto Switch Configuration

If you enable the option, the device will automatically switch to H.265 stream for the network camera (which supports H.265 video format) for the initial access.

Upgrade

Upgrade the added network cameras.

Export/Import

The information of added network camera can be generated into an excel file and exported to the local device for backup, including the IP address, port, password of admin, etc. And the exported file can be edited on your computer, like adding or deleting the content, and copying the settings to other devices by importing the excel file to it.

Protocol

To connect the network cameras which are not configured with the standard protocols, you can configure the customized protocols for them. The system provides 16 customized protocols.

Camera Activation Password Settings

Change the default password for activating and adding network cameras. For network cameras that are already connected, you can choose to change their passwords to this one in the following pup-up window.

Batch Configuration

The device can enable SVC function or automatically synchronize time of the selected network cameras.

Plug-and-Play

The device can add network camera automatically.

6.3.3 Display Settings

Configure the OSD (On-Screen Display), image settings, exposure settings, day/night switch settings, etc.

Steps

- 1. Go to Configuration → Camera → Display.
- 2. Set Camera.
- 3. Configure parameters as your desire.

OSD Settings

Configure the OSD (On-screen Display) settings for the camera, including date, time, camera name, etc.

Image Settings

Customize the image parameters including the brightness, contrast, and saturation for the live view and recording effect.

Exposure

Set the camera exposure time (1/10000 to 1 sec). A larger exposure value results in a brighter image.

Day/Night Switch

The camera can be set to day, night, auto or scheduled switch mode according to the surrounding illumination conditions or time schedule.

Backlight

Set the camera's wide dynamic range (0 to 100). When the surrounding illumination and the object have large differences in brightness, you should set the WDR value.

Image Enhancement

For optimized image contrast enhancement.

Figure 6-15 OSD

- **4.** Drag the text frames on the preview window to adjust the OSD position.
- 5. Click Apply.

6.3.4 Privacy Mask

You are allowed to configure the privacy mask areas that cannot be viewed or recorded.

- 1. Go to Configuration → Camera → Privacy Mask.
- 2. Select Camera.
- 3. Turn on Enable.

Figure 6-16 Privacy Mask

4. Drag to draw an area on the window. The frames of the areas will be marked with different colors.

Note

Up to 4 privacy mask areas can be configured. The size of each area can be adjusted.

5. Click Apply.

6.4 Event Configuration

6.4.1 Normal Event

Motion Detection

Motion detection enables the video recorder to detect the moving objects in the monitored area and trigger alarms. Refer to for details.

Video Tampering

Trigger alarm when the lens is covered and take alarm response actions.

Steps

1. Go to Configuration → Event → Normal Event → Video Tampering.

Figure 6-17 Video Tampering

- 2. Set Camera.
- 3. Turn on Enable.
- **4.** Adjust **Sensitivity** as your desire. The higher the value is, the more easily the video tampering can be triggered.
- 5. Set the arming schedule. Refer to *Configure Arming Schedule* for details.
- 6. Set the linkage actions. Refer to *Configure Alarm Linkage Action* for details.
- 7. Click Apply.

Video Loss

Detect video loss of a camera and take alarm response actions.

- 1. Go to Configuration → Event → Normal Event → Video Loss.
- 2. Set Camera.
- 3. Turn on Enable.
- 4. Set the arming schedule. Refer to *Configure Arming Schedule* for details.
- **5.** Set the linkage actions. Refer to **Configure Alarm Linkage Action** for details.
- 6. Click Apply.

Alarm Input

Set linkage actions for an external sensor alarm.

Steps

1. Go to Configuration → Event → Normal Event → Alarm Input.

Figure 6-18 Alarm Input

Local alarm input: Local alarm input is triggered by the external device that connected to the video recorder's terminal block.

2. Click **∠** of a desired alarm input.

Figure 6-19 Edit Alarm Input

- 3. Customize Alarm Name.
- **4.** Set alarm type as **N.O** (normally open) or **N.C** (normally closed).
- 5. Set Settings as Input to enable the function.

If you set **Settings** as **Nonuse**, the alarm input will be disabled. If you set **Settings** as **One-Key Disarmig**, the selected linkage method(s) of the alarm input will be disabled.

- 6. Set the arming schedule. Refer to Configure Arming Schedule for details.
- 7. Set the linkage actions. Refer to *Configure Alarm Linkage Action* for details.
- 8. Click Apply.

Alarm Output

Trigger an alarm output when an alarm is triggered.

Steps

1. Go to Configuration → Event → Normal Event → Alarm Output.

Figure 6-20 Alarm Output

- 2. Click **Z** of a desired alarm output.
- 3. Customize Alarm Name.
- 4. Select Dwell Time.

Figure 6-21 Edit Alarm Output

- 5. Set **Settings** as **Input** to enable the function.
- 6. Set the arming schedule. Refer to **Configure Arming Schedule** for details.
- 7. Click Apply.

Exception

Exception events can be configured to take the event hint in the live view window and trigger alarm outputs and linkage actions.

- 1. Go to Configuration \rightarrow Event \rightarrow Normal Event \rightarrow Exception .
- 2. Configure event hint. When the set events occur, you will receive hints in alarm center.
 - 1) Enable Event Hint.
 - 2) Select events to hint. Choose from:
 - Click of Event Hint Configuration to select events.
 - Click 🛕 in the upper-right corner of local menu to enter alarm center to select events.
- **3.** Select **Exception Type** to set its linkage actions.

Figure 6-22 Exceptions

- 4. Set the arming schedule. Refer to *Configure Arming Schedule* for details.
- 5. Click Apply.

6.4.2 Perimeter Protection

Perimeter protection includes line crossing detection, intrusion detection, region entrance detection, and region exiting detection.

Perimeter protection is only available for certain device models or camera models.

Line Crossing Detection

Line crossing detection detects people, vehicles, and objects crossing a set virtual line. The detection direction can be set as bidirectional, from left to right or from right to left.

- 1. Go to Configuration → Event → Perimeter Protection → Line Crossing.
- 2. Set Camera.
- 3. Turn on Enable.
- **4.** Set the detection rules and detection areas.
 - 1) Set Arming Area.

2) Set Direction as A<->B, A->B, or A<-B.

A<->B

Only the arrow on the B side shows. An object crossing a configured line in both directions can be detected and trigger alarms.

A->B

Only an object crossing the configured line from the A side to the B side can be detected.

B->A

Only an object crossing the configured line from the B side to the A side can be detected.

- 3) Click **Max. Size** and draw a quadrilateral in the preview window to set the maximum draw area size of the target.
- 4) Click **Min. Size** and draw a quadrilateral in the preview window to set the minimum draw area size of the target.
- 5) Click **Draw Area** and draw a quadrilateral in the preview window by specifying four vertexes of the detection region.
- **5.** Adjust **Sensitivity**. Sensitivity allows you to calibrate how readily movement triggers the alarm. A higher value results in the more readily to triggers motion detection.
- **6. Optional:** Set **Detection Target** as **Human** or **Vehicle** to discard alarms which are not triggered by human or vehicle.

This function is only available for certain models.

- 7. Set the arming schedule. Refer to *Configure Arming Schedule* for details.
- 8. Set the linkage actions. Refer to **Configure Alarm Linkage Action** for details.
- 9. Click Apply.

Intrusion Detection

Intrusion detection function detects people, vehicles, or objects that enter and loiter in a predefined virtual region.

Steps

- 1. Go to Configuration → Event → Perimeter Protection → Intrusion .
- 2. Select Camera to configure.
- 3. Turn on Enable.
- 4. Set the detection rules and detection areas.
 - 1) Select Arming Area.
 - 2) Adjust Time Threshold and Sensitivity.

Sensitivity

The size of the object that can trigger the alarm. The higher the value is, the more easily the detection alarm will be triggered. Its range is [1-100].

Time Threshold

Range [1s-10s], the threshold for the time of the object loitering in the region. When the duration of the object in the defined detection area is longer than the set time, the alarm will be triggered.

3) **Optional:** Set **Detection Target** as **Human** or **Vehicle** to discard alarms which are not triggered by human body or vehicle.

iNote

This function is only available for certain models.

- 4) Click **Max. Size** and draw a quadrilateral in the preview window to set the maximum draw area size of the target.
- 5) Click **Min. Size** and draw a quadrilateral in the preview window to set the minimum draw area size of the target.
- 6) Click **Draw Area** and draw a quadrilateral in the preview window by specifying four vertexes of the detection region.
- **5.** Set the arming schedule. Refer to **Configure Arming Schedule** for details.
- 6. Set the linkage actions. Refer to **Configure Alarm Linkage Action** for details.
- 7. Click Apply.

Region Entrance Detection

For certain network cameras, region entrance detection function detects people, vehicles or other objects which enter a pre-defined virtual region from the outside place, and some certain actions can be taken when the alarm is triggered.

Steps

- 1. Go to Configuration → Event → Smart Event → Region Entrance.
- 2. Set Camera.
- 3. Turn on Enable.
- **4. Optional:** Check **Save VCA Picture** to save the captured pictures of VCA detection.
- 5. Set the detection rules and detection areas.
 - 1) Set **Arming Area**. Up to 4 arming areas are selectable.
 - 2) Adjust **Sensitivity**. **Sensitivity**: Range [0-100]. The higher the value is, the more easily the detection alarm can be triggered.
 - 3) **Optional:** Set **Target Detection** as **Human** or **Vehicle** to discard alarms which are not triggered by human body or vehicle.

iNote

This function is only available for certain models.

- 4) Click **Draw Area** and draw a quadrilateral in the preview window by specifying four vertexes of the detection region.
- **6.** Set the arming schedule. Refer to **Configure Arming Schedule** for details.
- 7. Set the linkage actions. Refer to **Configure Alarm Linkage Action** for details.
- 8. Click Apply.

Region Exiting Detection

For certain network cameras, region exiting detection function detects people, vehicles or other objects which exit from a pre-defined virtual region, and some certain actions can be taken when the alarm is triggered.

Steps

- 1. Go to Configuration → Event → Smart Event → Region Exiting.
- 2. Set Camera.
- 3. Turn on Enable.
- 4. Optional: Check Save VCA Picture to save the captured pictures of VCA detection.
- 5. Set the detection rules and detection areas.
 - 1) Set **Arming Area**. Up to 4 arming areas are selectable.
 - 2) Adjust **Sensitivity**. **Sensitivity**: Range [0-100]. The higher the value is, the more easily the detection alarm can be triggered.
 - 3) **Optional:** Set **Target Detection** as **Human** or **Vehicle** to discard alarms which are not triggered by human body or vehicle.

This function is only available for certain models.

- 4) Click **Draw Area** and draw a quadrilateral in the preview window by specifying four vertexes of the detection region.
- **6.** Set the arming schedule. Refer to **Configure Arming Schedule** for details.
- 7. Set the linkage actions. Refer to **Configure Alarm Linkage Action** for details.
- 8. Click Apply.

6.4.3 Face Recognition

Face recognition is the function that compares a captured face (in image or video stream) with those in face picture libraries and returns its identity information if the face is recognized. Based on facial feature of human being, face recognition first checks if human face exists in the input image or video stream. If there is a human face, the function compares the face data (such as position, size, and facial feature) with those in current face picture libraries to identify the person.

Before You Start

Make sure you have disabled **Motion** and **Perimeter Protection**.

This function is only available for certain models.

Face Capture

Face capture detects human faces appearing in the scene. Linkage actions can be triggered when a human face is detected.

Steps

1. Go to Configuration → Event → Face Recognition → Face Capture.

Figure 6-23 Face Capture

- 2. Select Camera.
- 3. Turn on Enable.
- 4. Adjust Sensitivity.

Sensitivity

The higher the value is, the more easily the defocus image can trigger the alarm.

- 5. Set the arming schedule. Refer to **Configure Arming Schedule** for details.
- 6. Set the linkage actions. Refer to **Configure Alarm Linkage Action** for details.
- 7. Click Apply.

Face Picture Library Management

Face picture library is mainly used for face picture storage and face picture comparison.

The section is only available for certain models.

Add a Face Picture Library

Face picture library is used to store face pictures, it is essential for face picture comparison.

Steps

- 1. Go to Configuration → Face Picture Library .
- 2. Enter the admin password for authorization.
- 3. Click Add.
- 4. Enter the face picture library name.
- 5. Click Add.

You can also go to **Search** → **Human** to add the search results to the **Face Picture Library**.

What to do next

After a face picture library is added, you can edit its name, delete it, or upload face pictures to it.

Upload Face Pictures to the Library

You can upload a single face picture or import multiple face pictures to the library.

Before You Start

Ensure you have created a face picture library and enabled face picture comparison.

Steps

- 1. Go to Configuration → Face Picture Library.
- 2. Find the face picture library that you are going to upload face pictures, and click on .
- 3. Click Add.
- 4. Import picture(s).

Add one face picture to the library.

Add multiple face pictures to the library.

- Only JPG and JPEG formats are supported.
- Each picture size should be less than 1 MB.
- The picture resolution shall be between 80×80 and 1920×1080 .
- Only the pictures in the USB flash drive can be imported.

Face Picture Comparison

Face picture comparison compares the detected face pictures with face pictures in the face picture library. The device will trigger an alarm when comparison succeeded.

Before You Start

Ensure you have created at least one face picture library, and face pictures are added to the library. Refer to *Face Picture Library Management* for operation details.

Steps

1. Go to Configuration → Face Recognition → Face Picture Comparison .

Figure 6-24 Face Picture Comparison

- 2. Select a camera.
- 3. Turn on Enable.
- 4. Select the face picture library (or libraries) in List Library Linkage.
- 5. Set the face picture library similarity.

Similarity

Similarity value ranges from 0 to 100. Device will analyze the similarity between the detected face picture and face pictures in the library. When the similarity reaches the threshold value, the face picture comparison succeeded, and the face picture is recognized.

- 6. Set the arming schedule. Refer to Configure Arming Schedule for details.
- **7.** Set the linkage actions for **Linkage Succeeded** and **Linkage Failed**. Refer to **Configure Alarm Linkage Action** for details.

Linkage Succeeded

The device will perform linkage actions when the face picture comparison succeeded.

Linkage Failed

The device will perform linkage actions when the face picture comparison failed.

8. Click Apply.

6.4.4 Configure Arming Schedule

Steps

- 1. Click Arming Schedule.
- **2.** Choose one day of a week and set the time segment. Up to eight time periods can be set within each day.

Note

Time periods shall not be repeated or overlapped.

Figure 6-25 Set Arming Schedule

3. Click Apply.

6.4.5 Configure Alarm Linkage Action

Configure Alarm Pop-up Window

When an alarm is triggered, the local monitor displays in full screen the video image from the alarming channel configured for full screen monitoring. And when the alarm is triggered simultaneously in several channels, you must configure the auto-switch dwell time.

Steps

- 1. Go to Configuration → System → Live View → General.
- 2. Set the event output and dwell time.

Alarm Pop-up Output

Select the output to show event video.

Alarm Pop-up Delay

Set the time in seconds to show alarm event image. If alarms are triggered simultaneously in several channels, their full-screen images will be switched at an interval of 10 seconds (default dwell time).

- 3. Click Linkage Action of the alarm detection.
- 4. Select Alarm Pop-up Window alarm linkage action.
- 5. Select the channel(s) in Trigger Channel settings you want to make full screen monitoring.

Auto-switch will terminate once the alarm stops and back to the live view interface.

Configure Buzzer Alarm

The audio warning enables the video recorder to trigger an audible beep when an alarm is detected.

Steps

- 1. Go to Configuration → System → Live View → General.
- 2. Turn on Audio, and set Volume.
- 3. Go to Linkage Action interface of the alarm detection.
- 4. Select Buzzer Alarm linkage action.

Notify Surveillance Center

The video recorder can send an exception or alarm signal to the remote alarm host when an event occurs. The alarm host refers to the computer installed with client software (e.g., iVMS-4200, iVMS-5200).

Steps

- 1. Go to Configuration → Network → General → More Settings.
- 2. Set Alarm Host IP and Alarm Host Port.
- 3. Go to Linkage Action interface of the alarm detection.
- 4. Select Notify Surveillance Center.

Configure Email Linkage

The video recorder can send an email with alarm information to a user or users when an alarm is detected.

- 1. Go to Configuration \rightarrow Network \rightarrow Email.
- 2. Configure the settings.
- 3. Go to Linkage Action interface of the alarm detection.
- 4. Select **Send Email** as alarm linkage action.

Trigger Alarm Output

The alarm output can be triggered by the normal and smart events.

Steps

- **1.** Go to **Linkage Action** interface of the alarm input or event detection.
- 2. Click Alarm Output Linkage.
- 3. Select the alarm outputs to trigger.
- 4. Go to Configuration → Event → Normal Event → Alarm Output.
- 5. Select an alarm output item from the list. Refer to Alarm Output for details.

Configure PTZ Linkage

Video recorder can trigger the PTZ actions (e.g., call preset/patrol/pattern) when the alarm event, or VCA detection events occur.

Steps

- 1. Go to Linkage Action interface of the alarm input or VCA detection.
- 2. Select PTZ Linkage.
- 3. Select the camera to perform the PTZ actions.
- **4.** Select the preset/patrol/pattern No. to call when the alarm events occur.

Figure 6-26 PTZ Linkage

iNote

You can set one PTZ type only for the linkage action each time.

6.5 Recording Management

6.5.1 Configure Recording Schedule

Video recorder will automatically start/stop recording according to the configured schedule.

Configure Continuous Recording

Steps

- 1. Go to Configuration → Record → Parameter .
- 2. Set the continuous main stream/sub-stream recording parameters for the camera.
- 3. Go to Configuration → Record → Schedule.
- 4. Select recording type as Continuous.

Configure Event Recording

You can configure the recording triggered by the line crossing detection, intrusion detection, etc...

Steps

- 1. Go to Configuration → Event .
- **2.** Configure the event detection and select the cameras to trigger the recording when event occurs.
- 3. Go to Configuration → Record → Parameter.
- **4.** Set the continuous main stream/sub-stream recording parameters for the camera.
- 5. Go to Configuration → Record → Schedule .
- 6. Select recording type as **Event**.

Edit Schedule

Steps

1. Go to Configuration → Record → Schedule .

Figure 6-27 Recording Schedule

Continuous

Continuous recording.

Event

Recording triggered by all event triggered alarms.

- 2. Select a camera in Camera No.
- 3. Turn on Enable.
- 4. Configure the recording schedule.
 - 1) Click Edit.
 - 2) Select a day to configure in Weekday.
 - 3) To set an all-day recording schedule, check All Day and select schedule Type.
 - 4) To set other schedules, uncheck All Day and set Start/End time and schedule Type.

Up to 8 periods can be configured for each day. And the time periods cannot be overlapped with each other.

5) Click **OK** to save the settings and go back to upper level menu.

You can also select schedule type as **Continuous** or **Event**, and drag the cursor on the desired period to draw a colored bar.

5. Click **Advanced** to set advanced parameters.

Record Audio

Audio will be record to the video file.

Pre-Record

The time you set to record before the scheduled time or event. For example, when an alarm triggers the recording at 10:00, and if you set the pre-record time as 5 seconds, the camera records at 9:59:55.

Post-Record

The time you set to record after the event or the scheduled time. For example, when an alarm triggered recording ends at 11:00, and if you set the post-record time as 5 seconds, it records till 11:00:05.

Stream Type

Main stream and sub-stream are selectable for recording. When you select sub-stream, you can record for a longer time with the same storage space.

Video/Picture Expiry Time

The expiry time is period for a recorded file to be kept in the HDD. When the deadline is reached, the file will be deleted. If you set the expired time to 0, the file will not be deleted. The actual keeping time for the file should be determined by the capacity of the HDD.

Figure 6-28 Advanced Parameters

- 6. Click **OK** to save the advanced settings.
- 7. Click Apply.

6.5.2 Configure Recording Parameter

Steps

- 1. Go to Configuration → Record → Parameter to configure camera main stream and sub-stream parameters.
- 2. Configure recording parameters.

Main Stream

Main stream refers to the primary stream that affects data recorded to the hard disk drive and will directly determine your video quality and image size. Comparing with the substream, the main stream provides a higher quality video with higher resolution and frame rate.

Sub-Stream

Sub-stream is a second codec that runs alongside the mainstream. It allows you to reduce the outgoing internet bandwidth without sacrificing your direct recording quality. Sub-stream is often exclusively used by smartphone applications to view live video. Users with limited internet speeds may benefit most from this setting.

Frame Rate

Frame rate refers to how many frames are captured each second. A higher frame rate is advantageous when there is movement in the video stream, as it maintains image quality throughout.

Resolution

Image resolution is a measure of how much detail a digital image can hold: the greater the resolution, the greater the level of detail. Resolution can be specified as the number of pixel-columns (width) by the number of pixel-rows (height), for example, 1024×768 .

Bitrate

The bit rate (in Kbit/s or Mbit/s) is often referred to as speed, but actually defines the number of bits/time unit and not distance/time unit.

Enable H.264+/Enable H.265+

The H.264+/H.265+ mode helps to ensure the high video quality with a lowered bitrate. It can effectively reduce the need of bandwidth and HDD storage space.

Audio Source

The audio input signal source. If you select **Audio Source** as **Camera**, it will transmit audio via coaxial cable, and make the local audio input signal unavailable. Ensure the camera supports to transmit audio via coaxial cable before selecting **Audio Source** as **Camera**.

i Note

Audio Source is only available for certain models.

Enable Low Bitrate Mode

In order to save device bandwidth or memory, the device would automatically adjust camera video main stream bitrate according to your network condition.

iNote

Low bitrate mode is only available for certain camera models. If your camera supports this function, it would be enabled by default.

3. Click Apply.

6.5.3 Storage Device

Initialize HDD

If it is the first time you use your HDD, please initialize it after it is installed.

Before You Start

Install at least an HDD to your video recorder.

Steps

- 1. Go to Configuration → Record → Storage .
- 2. Select an HDD.
- 3. Click Init.

Add Network Disk

You can add the allocated NAS or IP SAN disk to the video recorder, and use it as a network HDD.

- **1.** Go to Configuration \rightarrow Record \rightarrow Storage .
- 2. Click Add.
- 3. Set NetHDD.
- 4. Set Type as NAS or IP SAN.
- 5. Enter NetHDD IP address.
- **6.** Click **a** to search the available disks.

Figure 6-29 Add NetHDD

- 7. Select NAS disk from the list, or manually enter the directory in **NetHDD Directory**.
- 8. Click OK.

Up to 8 TB storage capacity is allowed for each network disk.

Result

The added network disks will be displayed in the storage device list.

6.5.4 Configure Storage Mode

Configure HDD Groups

Multiple HDDs can be managed in groups. Video from specified channels can be recorded onto a particular HDD group through HDD settings.

Steps

This function is only available for certain models.

1. Go to Configuration → Record → Storage Mode .

- 2. Select Mode as Group.
- 3. Select a group number.
- 4. Select IP cameras to record on the HDD group.

Figure 6-30 Group

- 5. Click Apply.
- **6.** Restart the video recorder to activate the new storage mode settings.
- 7. After restart, go to Configuration → Record → Storage.
- **8.** Click ✓ of desired HDD to set the group.
- **9.** Select a group number for the current HDD.
- 10. Click Apply.

 \square_{Note}

Regroup the cameras for HDD if the HDD group number is changed.

Configure HDD Quota

Each camera can be configured with an allocated quota for storing videos.

Steps

iNote

This function is only available for certain models.

- 1. Go to Configuration → Record → Storage Mode .
- 2. Set Mode as Quota.
- 3. Select a camera to set quota in Camera.
- 4. Enter the storage capacity in Record Capacity.

Figure 6-31 Quota

When the quota capacity is set to 0, all cameras will use the total capacity of HDD for videos and pictures.

- 5. Click Apply.
- **6.** Restart the video recorder to activate the new settings.

6.5.5 Advanced Settings

Steps

- 1. Go to Configuration → Record → Advanced.
- 2. Configure the parameters as your desire.

Overwrite

- Disable: When the HDD is full, video recorder will stop writing.
- Enable: When hard drive is full, video record will continue to write new files by deleting the oldest files.

Enable HDD Sleeping

HDDs which are free of working for a long time will turn into sleep status.

Save Camera VCA Data

Camera VCA data will be saved so that you can search it.

Disabling **Save Camera VCA Data** will delete the existing Dual-VCA and motion detection information, and stop analyzing and storing Dual-VCA and motion detection information.

Alarm Storage

When the HDD free space is not enough, you can disable it to save space, but your device will stop storing alarm information.

Digital Video Recorder User Manual

Chapter 7 Maintenance

7.1 Restore Default

Steps

- 1. Click o at the upper-right corner.
- 2. Select the restoring type.

Simple Restore

Restore all parameters, except the network (including IP address, subnet mask, gateway, MTU, NIC working mode, default route, server port, etc.) and user account parameters, to the factory default settings.

Factory Defaults

Restore all parameters to the factory default settings.

Restore to Inactive

Restore the device to the inactive status, and leave all settings unchanged except restoring user accounts.

3. Click Yes. The device will reboot automatically.

7.2 Search Log

The operation, alarm, exception and information of video recorder can be stored in logs, which can be viewed and exported at any time.

Steps

- 1. Click at the upper-right corner.
- 2. Click More.
- 3. Click Log Information.
- **4.** Set the search conditions.
- 5. Click Search.

7.3 System Service

Steps

- 1. Click at the upper-right corner.
- 2. Click More.
- 3. Click System Service.
- 4. Configure the parameters as your desire.

RTSP

You can specifically secure the stream data of live view by setting the RTSP authentication.

RTSP Authentication

Two authentication types are selectable, if you select **digest**, only the request with digest authentication can access the video stream by the RTSP protocol via the IP address. For security reasons, it is recommended to select **digest** as the authentication type.

ISAPI

ISAPI (Internet Server Application Programming Interface) is an open protocol based on HTTP, which can realize the communication between the system devices (e.g., network camera, NVR, etc.). The video recorder is used as a server, the system can find and connect the video recorder.

HTTP

The admin user account can disable the HTTP service from the GUI or the web browser. After the HTTP is disabled, all the related services, including ISAPI and ONVIF, will terminate as well.

HTTP Authentication

If you need to enable the HTTP service, you can set the HTTP authentication to enhance the access security. Two authentication types are selectable. For security reasons, it is recommended to select **digest** as the authentication type.

Camera Added Detection

The function detects the network camera status. If the network camera has been added by another video recorder, the network camera status will show as **III** in **Online Device** list.

5. Click Apply.

7.4 Buzzer Switch

You can enable or disable buzzer with alarm linkage or exceptional linkage.

Steps

- 1. Click 1 at the upper-right corner.
- 2. Click More.
- 3. Go to Buzzer Switch.
- 4. Turn on or turn off Enable.

7.5 Device Maintenance

7.5.1 Schedule Reboot

The device will automatically restart according to the schedule.

Steps

- 1. Click at the upper-right corner.
- 2. Click More.
- 3. Go to Device Maintenance → Enable Schedule Reboot.
- 4. Turn on Enable.
- 5. Set the reboot schedule.
- 6. Click Apply.

7.5.2 Device Status

You can mute the selected channel(s).

Steps

- 1. Click o at the upper-right corner.
- 2. Click More.
- 3. Go to Device Maintenance → Device Status.
- 4. In the Mute and Not Disturb column, check the corresponding channel(s).

Result

The selected channel(s) will be muted.

7.6 Upgrade

Do not shutdown or turn off the power during upgrade.

7.6.1 Local Upgrade

Before You Start

Store the upgrade firmware to a backup device, and connect it to your device.

- 1. Click at the upper-right corner.
- 2. Click .
- 3. Click Local Upgrade.
- **4.** Select a backup device in **Device Name**.
- **5.** Select the upgrade firmware.
- 6. Click Upgrade. Your device will reboot automatically.

7.6.2 Online Upgrade

Upgrade the device with the latest online firmware.

Before You Start

Ensure Hik-Connect is enabled and properly configured. Refer to *Hik-Connect* for details.

Steps

- 1. Click ① at the upper-right corner.
- 2. Click 0 .
- 3. Go to Online Upgrade.
- 4. Download the latest firmware.

Auto Download The will automatically check and download the latest firmware.

Test Upgrade Click **Test Upgrade** to manually check and download the latest firmware.

5. Upgrade your device if a new firmware version is available. The device will reboot automatically.

Chapter 8 Alarm

When events occur, you can view their details in alarm center.

8.1 Set Event Hint

Select the events to hint in alarm center.

Steps

- 1. Click at the upper-right corner.
- 2. Set Exception, Basic Event, or Smart Event as your desire.

Figure 8-1 Alarm Center

- 3. Click and select events to hint.
- 4. Click OK.

When the selected events occur, the alarm information will be displayed in [4] (locating at the upper-right corner of local menu).

8.2 View Alarm in Alarm Center

- 1. Click at the upper-right corner of local menu.
- 2. Click Exception, Basic Event, or Smart Event to view as your desire.

Chapter 9 Web Operation

9.1 Introduction

You can get access to the video recorder via web browser.

You may use one of the following listed web browsers: Internet Explorer 11.0, Apple Safari, Mozilla Firefox, and Google Chrome. The supported resolutions include 1024×768 and above.

For certain models, you will have to download a web component plug-in, and install it. Otherwise, a few functions would be unavailable. The download address is http://

<u>hikdownload.ys7.com/web/webplugin/windows/WebComponents/standard/</u> WebComponents.exe .

9.2 Login

You shall acknowledge that the use of the product with Internet access might be under network security risks. For avoidance of any network attacks and information leakage, please strengthen your own protection. If the product does not work properly, please contact with your dealer or the nearest service center.

Steps

1. Open web browser, input the IP address of the video recorder and then press Enter.

If you have changed HTTP port, enter *http://IP address:HTTP port* in address bar. E.g., *http:* 192.168.1.64:81.

- 2. Enter user name and password in the login interface.
- 3. Click Login.

Figure 9-1 Login

4. Follow the installation prompts to install the plug-in.

i Note

You may have to close the web browser to finish the installation of the plug-in.

9.3 Live View

After login, live view interface shows.

Figure 9-2 Live View

9.4 Playback

Click Playback to enter playback interface.

Figure 9-3 Playback

9.5 Configuration

Click **Configuration** to enter configuration interface.

Figure 9-4 Configuration

9.6 Log

- 1. Go to Maintenance → System → Maintenance → Log.
- 2. Set the search conditions.
- 3. Click Search.

Digital Video Recorder User Manual

Figure 9-5 Log

Chapter 10 Appendix

10.1 Glossary

Dual-Stream

Dual-stream is a technology used to record high resolution video locally while transmitting a lower resolution stream over the network. The two streams are generated by the DVR, with the main stream having a maximum resolution of 1080P and the sub-stream having a maximum resolution of CIF.

DVR

Acronym for Digital Video Recorder. A DVR is device that is able to accept video signals from analog cameras, compress the signal and store it on its hard drives.

HDD

Acronym for Hard Disk Drive. A storage medium which stores digitally encoded data on platters with magnetic surfaces.

DHCP

Dynamic Host Configuration Protocol (DHCP) is a network application protocol used by devices (DHCP clients) to obtain configuration information for operation in an Internet Protocol network.

HTTP

Acronym for Hypertext Transfer Protocol. A protocol to transfer hypertext request and information between servers and browsers over a network.

PPPoE

PPPoE, Point-to-Point Protocol over Ethernet, is a network protocol for encapsulating Point-to-Point Protocol (PPP) frames inside Ethernet frames. It is used mainly with ADSL services where individual users connect to the ADSL transceiver (modem) over Ethernet and in plain Metro Ethernet networks.

DDNS

Dynamic DNS is a method, protocol, or network service that provides the capability for a networked device, such as a router or computer system using the Internet Protocol Suite, to notify a domain name server to change, in real time (ad-hoc) the active DNS configuration of its configured hostnames, addresses or other information stored in DNS.

Hybrid DVR

A hybrid DVR is a combination of a DVR and NVR.

NTP

Acronym for Network Time Protocol. A protocol designed to synchronize the clocks of computers over a network.

Digital Video Recorder User Manual

NTSC

Acronym for National Television System Committee. NTSC is an analog television standard used in such countries as the United States and Japan. Each frame of an NTSC signal contains 525 scan lines at 60Hz.

NVR

Acronym for Network Video Recorder. An NVR can be a PC-based or embedded system used for centralized management and storage for IP cameras, IP Domes and other DVRs.

PAL

Acronym for Phase Alternating Line. PAL is also another video standard used in broadcast televisions systems in large parts of the world. PAL signal contains 625 scan lines at 50Hz.

PTZ

Acronym for Pan, Tilt, Zoom. PTZ cameras are motor driven systems that allow the camera to pan left and right, tilt up and down and zoom in and out.

USB

Acronym for Universal Serial Bus. USB is a plug-and-play serial bus standard to interface devices to a host computer.
