

# DIGITAL VIDEO RECORDER

User's Manual

V1.4.2

ZHEJIANG DAHUA VISION TECHNOLOGY CO., LTD.

#### General

This user's manual (hereinafter referred to be "the Manual") introduces the functions and operations of the DVR devices (hereinafter referred to be "the Device").

#### Models

Series	Models		
XVR Cooper	DH-XVR1B04/DH-XVR1B04H/DH-XVR1B08/DH-XVR1B08H/DH-XVR1B16		
series	/DH-XVR1B16H		
	DH-XVR4104C-X/DH-XVR4108C-X/DH-XVR4116HS-X/DH-XVR4104HS-X/		
XVR4 series	DH-XVR4108HS-X/DH-XVR4104HS-X1/DH-XVR4108HS-X1/DH-XVR4104		
	C-X1/DH-XVR4108C-X1/DH-XVR4216AN-X/DH-XVR4232AN-X		
	DH-XVR5108C-X/DH-XVR5104C-4KL-X/DH-XVR5104C-X/DH-XVR5108H-		
	X/DH-XVR5116H-X/DH-XVR5104H-4KL-X/DH-XVR5108H-4KL-X/		
	DH-XVR5116H-4KL-X/DH-XVR5108HE-X/DH-XVR5116HE-X/		
	DH-XVR5108HS-X/DH-XVR5116HS-X/DH-XVR5104HS-4KL-X/		
	DH-XVR5108HS-4KL-X/DH-XVR5104HS-X/DH-XVR5104H-X/		
	DH-XVR5104HE-X/ DH-XVR5104HS-X1/DH-XVR5104C-X1

	DH-XVR7416L-4KL-X/DH-XVR7816S-4KL-X/DH-XVR7816S-4KL-X-LP		

#### Safety Instructions

The following categorized signal words with defined meaning might appear in the Manual.

Signal Words	Meaning
	Indicates a high potential hazard which, if not avoided, will result in death or serious injury.

Signal Words	Meaning
	Indicates a medium or low potential hazard which, if not avoided, could result in slight or moderate injury.
	Indicates a potential risk which, if not avoided, could result in property damage, data loss, lower performance, or unpredictable result.
©TIPS	Provides methods to help you solve a problem or save you time.
	Provides additional information as the emphasis and supplement to the text.

# **Revision History**

Version	Revision Content	Release Time
V1.4.2	Updated to 4.0 UI version.	February 2020
V1.4.1	Added two models.	November 2019
	1. Added three models.	
V1.4.0	2. Replaced two PoC images and updated some descriptions.	July 2019
V1.3.0	<ol> <li>Updated safety baseline functions.</li> <li>Match language automatically during initialization; change GMT time zone to UTC time zone; match PAL and NTSC automatically.</li> <li>Password on the local login interface is displayed with plaintext.</li> <li>Reboot is not required after service port number is changed.</li> <li>Added record control tab.</li> <li>Added encoding enhancement function.</li> <li>Added 802.1x access certification and firewall function.</li> <li>Added TV adjustment function.</li> <li>Added POS function at web.</li> <li>Battery status of E model can be pushed to mobile phone.</li> <li>Combine the channel info and POC info interface.</li> </ol>	January 2019
V1.2.2	<ol> <li>Added four models.</li> <li>Added SMD.</li> </ol>	November 2018
V1.2.1	Added one model	September 2018
V1.2.0	<ol> <li>Added fourteen models.</li> <li>Updated following sections:</li> </ol>	July 2018

Version	Revision Content	Release Time	
	$\diamond$ Important Safeguards and Warnings		
	$\diamond$ Initialize the Device		
	♦ Configure POS Settings		
	1. Added four models.		
2. Added following sections:			
	Regulatory Information		
	Privacy Protection Notice		
	$\diamond$ Use Reset Button on the Mainboard		
	◇ Configure White Light		
V1.1.0	◇ Configure Siren	June 2018	
	View PoC Information		
	3. Updated following sections:		
	About the Manual		
	$\diamond$ Important Safeguards and Warnings		
	◇ Configure IVS Function		
	♦ Configure Face Detection		
V1.0.1	Added eight models.	March 2018	
V1.0.0	First Release. February 2018		

#### Privacy Protection Notice

As the device user or data controller, you might collect personal data of others such as face, fingerprints, car plate number, Email address, phone number, GPS and so on. You need to be in compliance with the local privacy protection laws and regulations to protect the legitimate rights and interests of other people by implementing measures include but not limited to: providing clear and visible identification to inform data subject the existence of surveillance area and providing related contact.

#### About the Manual

- The Manual is for reference only. If there is inconsistency between the Manual and the actual product, the actual product shall prevail.
- We are not liable for any loss caused by the operations that do not comply with the Manual.
- The Manual would be updated according to the latest laws and regulations of related regions. For detailed information, see the paper manual, CD-ROM, QR code or our official website. If there is inconsistency between paper manual and the electronic version, the electronic version shall prevail.
- All the designs and software are subject to change without prior written notice. The product updates might cause some differences between the actual product and the Manual. Please contact the customer service for the latest program and supplementary documentation.
- There still might be deviation in technical data, functions and operations description, or errors in print. If there is any doubt or dispute, please refer to our final explanation.
- Upgrade the reader software or try other mainstream reader software if the Manual (in PDF format) cannot be opened.

- All trademarks, registered trademarks and the company names in the Manual are the properties of their respective owners.
- Please visit our website, contact the supplier or customer service if there is any problem occurred when using the device.
- If there is any uncertainty or controversy, please refer to our final explanation.

# Important Safeguards and Warnings

This Chapter describes the contents covering proper handling of the Device, hazard prevention, and prevention of property damage. Read these contents carefully before using the Device, comply with them when using, and keep it well for future reference.

#### **Operation Requirements**

- Do not place or install the Device in a place exposed to sunlight or near the heat source.
- Keep the Device away from dampness, dust or soot.
- Keep the Device installed horizontally on the stable place to prevent it from falling.
- Wall-mounting is not supported.
- Do not drop or splash liquid onto the Device, and make sure there is no object filled with liquid on the Device to prevent liquid from flowing into the Device.
- Install the Device in a well-ventilated place, and do not block the ventilation of the Device.
- Operate the device within the rated range of power input and output.
- Do not dissemble the Device.
- Transport, use and store the Device under the allowed humidity and temperature conditions.

#### **Electrical Safety**

- Use the battery of specified manufacturer; otherwise there might result in explosion. When replacing battery, make sure the same type is used. Improper battery use might result in fire, explosion, or inflammation.
- Follow the instructions to dispose of the used battery.
- Use the recommended power cables in the region and conform to the rated power specification.
- Use the power adapter provided with the Device; otherwise, it might result in people injury and device damage.
- The power source shall conform to the requirement of the Safety Extra Low Voltage (SELV) standard, and supply power with rated voltage which conforms to Limited power Source requirement according to IEC60950-1. Please note that the power supply requirement is subject to the device label.
- Connect the device (I-type structure) to the power socket with protective earthing.
- The appliance coupler is a disconnection device. When using the coupler, keep the angle for easy operation.

# 1.1 Overview

The Device is an excellent digital monitor product for security industry. The embedded LINUX OS assures the stable operation. The H.265 and G.711 technologies assure the high quality image and low bit stream. The frame-by-frame play function displays more details for analysis, and provides the functions such as record, playback, and monitor and assures the synchronization for audio and video. The Device also adopts the advanced control technology and great network data transmission capability.

The Device adopts embedded design to achieve high security and reliability. It can work in the local end and, with strong networking capability it can get connected to the professional surveillance software (Smart PSS) to form a security network to show its powerful remote monitoring function.

The Device is applicable to the areas such as bank, telecom, electricity, traffic, intelligent residential district, factory, warehouse, resources, and water conservancy facilities.

# **1.2** Functions

The functions might be different depending on the software and hardware version of the model you purchased.

#### **Smart Detection**

- Smart detection: Effectively detect persons and motor vehicles in the video.
- Face detection: Effectively recognize faces in the video, analyze and carry out structured storage of faces, and search faces quickly.
- Analyze IVS, carry out tripwire and zone intrusion analysis of persons and vehicles, and effectively filter false report caused by tree leaves, rain and brightness changes.

#### **Real-time Surveillance**

- Support VGA port and HDMI port to realize the surveillance through monitors.
- Support HDMI, VGA, and TV output at the same time.

#### **IoT Management**

Provide specific management module for IoT features including humidity and temperature data reports and alarms linkage.

#### Sensor Integration

Integrate coaxial cameras with diverse array of sensors such as temperature, humidity and wireless alarm devices.

#### **Storage Management**

- Special data format to guarantee data security and avoid the risk of modifying data viciously.
- Support digital watermark.

#### **Compression Format**

Support multiple-channel audio and video signal. An independent hardware decodes the audio and video signal from each channel to maintain video and audio synchronization.

#### **Backup Function**

- Support backup operation through USB port (such as USB storage disk, portable HDD, and burner).
- Client-end user can download the file from local HDD through network to backup.

#### **Record & Playback**

- Support each channel real-time record independently, and simultaneously support the functions such as search, backward play, network monitor, record search, and download.
- Support various playback modes: slow play, fast play, backward play and frame by frame play.
- Support time title overlay so that you can view event accurate occurred time.
- Support zooming in the selected area in the live view.

#### **Network Operation**

Support network remote real-time monitor, remote record search and remote PTZ control.

#### **Alarm Activation**

- Several relay alarm outputs to realize alarm activation and on-site light control.
- The alarm input port and output port have the protection circuit to guarantee the Device safety.

#### **Communication Port**

- RS-485 port can realize alarm input and PTZ control.
- RS-232 port can connect to keyboard, COM port of PC or the matrix control.
- Standard Ethernet port can realize network remote access function.
- The dual-network port has the multi-address, fault tolerance, load balance setup mode.

#### PTZ Control

Support PTZ decoder through RS-485 port.

#### **Intelligent Operation**

- Support mouse operation function.
- Support "copy and paste" function for the same settings.

#### UPnP (Universal Plug and Play)

Establish mapping connection between LAN and WAN through UPnP protocol.

#### **Camera Self-adaptive**

Auto-recognize and work with the PAL or NTSC camera and HD camera.

# 2 Getting Started

# 2.1 Checking the Components

#### $\square$

The actual appearance, component, or quantity might be different depending on the model you purchased.

When you receive the Device, check the package according to the following checking list. If any of the items are missing or damaged, contact the local retailer or after-sales engineer immediately.

Sequence	Checking items		Requirement
1	Package	Appearance	No obvious damage.
		Packing materials	No broken or distorted positions that could be caused by hit.
2	Labels	Labels on the device	Not torn up. Do not tear up or throw away the labels; otherwise the warranty services are not ensured. You need to provide the serial number of the product when you call the after-sales service.
3	Device	Appearance	No obvious damage.
		Data cables, power cables, fan cables, mainboard	No connection loose.

# 2.2 Installing HDD

Check whether the HDD is already installed in the Device when you first time using the Device. It is suggested to use the HDD recommended officially. Do not use the PC HDD.

Shut down the device and then unplug the power cable before you open the case to replace the HDD.

# 2.2.1 DH-XVR5108C-X/DH-XVR5104C-4KL-X/DH-XVR5104C-X/ DH-XVR4104C-X/DH-XVR4108C-X/DH-XVR5104C-X1/ DH-XVR4104C-X1/DH-XVR4108C-X1

1. Remove the screws to take 2. Fix the screws on the HDD off the cover.

but do not fasten them.

3. Match the screws with the holes on the DVR to place the HDD.

4. Turn the DVR upside down to see the screws and then fasten them.

5. Use the HDD cable and power cable to connect HDD and mainboard.

6. Put back the cover and fasten the screws.

# 2.2.2 DH-XVR7104E-4KL-X/DH-XVR7108E-4KL-X/DH-XVR7104E-

## 4KL-B-X/ DH-XVR7108E-4KL-B-X

#### 2.2.2.1 Installing Battery

#### $\square$

The battery is only provided with some models.

1. Pull the battery cable through the hole.

2. Connect to the cable into the port.

## 2.2.2.2 Installing HDD

#### 

Skip step 6 if the battery is not equipped with the model you purchased.

1. Remove the screws to take off the cover.

 Match the holes on the bracket with the screw holes on HDD.

- 2. Remove the screws to take off the bracket.

5. Use screws to fix the HDD onto the bracket.

3. Put the HDD onto the bracket.

 (Optional) Pull the battery cable through the hole to connect into the cable port.

8. Install the bracket back and 9. Put back the cover and then fasten the screws.

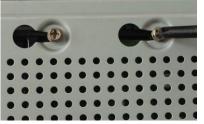

fasten the screws.

2.2.3 DH-XVR4116HS-X/DH-XVR5108HS-X/DH-XVR5116HS-X/DH -XVR5104HS-4KL-X/DH-XVR5108HS-4KL-X/

DH-XVR5108H-X/DH-XVR5116H-X/DH-XVR5104H-4KL-X/DH-XVR 5108H-4KL-X/DH-XVR5116H-4KL-X/DH-XVR5108HE-X/DH-XVR51 16HE-X/DH-XVR7104HE-4KL-X/DH-XVR7108HE-4KL-X/DH-XVR7 116HE-4KL-X/DH-XVR7108HE-4K-X/DH-XVR5104HS-X/ DH-XVR4104HS-X/DH-XVR5104H-X/DH-XVR5104HE-X/DH-XVR4 108HS-X/DH-XVR5104HS-X1/DH-XVR4104HS-X1/ DH-XVR4108HS-X1/DH-XVR5104H-X1/DH-XVR5104HE-X1/DH-X VR5104H-X-4P/DH-XVR5108H-X-8P/DH-XVR7108HE-4K-X2

1. Remove the screws on the rear panel.

4. Turn the device to see the back side of it. Align the screws of the HDD with the holes on the back of the device, and then fix the screws.

2. Fix the screws on the HDD, but do not be fastened.

 Use the HDD cable and power cable to connect HDD and mainboard.

3. Place the HDD onto the Device.

6. Put back the cover and fix the screws.

2.2.4 DH-XVR4216AN-X/DH-XVR4232AN-X/DH-XVR5216AN-X/D H-XVR5232AN-X/DH-XVR5208AN-4KL-X/DH-XVR5216AN-4KL-X/ DH-XVR5216A-X/DH-XVR7208A-4KL-X/DH-XVR7216A-4KL-X/DH-XVR7208A-4K-X/DH-XVR5108H-4KL-X-8P/DH-XVR5208AN-4KL-X -8P/DH-XVR5216AN-4KL-X-16P/DH-XVR5216AN-X-16P/DH-XVR7 208A-4K-X2

1. Remove the screws on the cover.

 Fix the screws onto the HDD, but do not be fastened.

 Put the HDD into the Device.

 Turn the device to see the back side of it. Align the screws of the HDD with the holes on the back of the device, and then fix the screws.

 Use the HDD cable and power cable to connect HDD and mainboard.

Put back the cover and fix the screws.

## 2.2.5 DH-XVR7416L-4KL-X/DH-XVR5432L-X

1. Remove the screws on cover.

2. Use the screws to fix the HDD onto the bracket.

Connect one end of HDD cable to the HDD.

 Connect the other end of HDD cable to the mainboard.

- 6. Put back the cover and fix the screws.

# 2.2.6 DH-XVR7816S-4KL-X/DH-XVR5832S-X/DH-XVR7816S-4KL-

## X-LP

1. Remove the screws on the cover.

2. Fix the HDD(s) onto the bracket. Remove the top bracket if you want to install HDD to the bottom bracket.

3. Connect one end of HDD cable to the HDD.

 Connect the other end of HDD cable to the mainboard.

5. Use the power cable to connect HDD and mainboard.

6. Put back the cover and fix the screws.

# 2.2.7 DH-XVR1B04/DH-XVR1B04H/DH-XVR1B08/DH-XVR1B08H/ DH-XVR1B16/DH-XVR1B16H

1. Remove the screws on the cover.

 Connect the HDD cable and power cable to HDD, and fasten the screws in HDD.

 Align the screws of the HDD with the holes on the back of the device.

 Turn the Device upside down and then fasten the screws.

5. Connect the HDD cable and the power cable to the mainboard.

6. Put back the cover and fasten the screws.

# 2.3 Installing Device into Rack

 $\square$ 

Only DH-XVR7416L-4KL-X/DH-XVR5432L-X/DH-XVR7816S-4KL-X/DH-XVR5832S-X models support this installation.

To install the DVR into rack, do the following:

- <u>Step 1</u> Check whether the in-house temperature is lower than  $35^{\circ}C(95^{\circ}F)$  and make sure the 15 cm (6 inches) spacing around the Device for ventilation.
- Step 2 Use six screws to fix the DVR on each side.
- <u>Step 3</u> Install from the bottom up.

If you want to install more accessories to the rack, take preventive measures to avoid power socket overload.

<u>Step 4</u> (Optional) Install more accessories to the rack if needed.

# 3 The Grand Tour

This chapter introduces various components of the Device, remote control and mouse operations.

No.	Port Name	Function
1	GND	Ground.
2	Power button	Turns on/off the Device.
3	Power input port	Inputs power.
4	Audio input port	Receives the analog audio signal output from the devices such as microphone.
5	Audio input port (MIC IN)	Tow-way talk input port which receives the analog audio signal output from the devices such as microphone, pickup.

No.	Port Name	Function
6	Audio output port (MIC OUT)	Tow-way talk output port which outputs the analog audio signal to the devices such as the sound box.
7	Audio output port	Outputs the analog audio signal to the devices such as the sound box.
8	Video output port	Connect to video output devices such as TV.
	Alarm input port 1–16	<ul> <li>Four groups of alarm output ports (Group 1: port 1 to port 4; Group 2: port 5 to port 8; Group 3: port 9 to port 12; Group 4: port 13 to port 16). These ports receive the signal from the external alarm source. There are two types; NO (Normally Open) and NC (Normally Closed).</li> <li>When your alarm input device is using external power, make sure that the device and the NVR have the same ground.</li> </ul>
9	Alarm output port 1–5 (NO1–NO5; C1–C5; NC5)	<ul> <li>Five groups of alarm output ports. (Group 1: port NO1– C1,Group 2:port NO2–C2,Group 3:port NO3–C3, Group 4: port NO4–C4, Group 5: port NO5, C5, NC5). These ports output alarm signal to the alarm device. Make sure that power supply to the external alarm device.</li> <li>NO: Normally open alarm output port.</li> <li>C: Alarm output public end.</li> <li>NC: Normally closed alarm output port.</li> </ul>
	RS-485 communication port	You can connect to the control devices such as speed dome PTZ. RS-485_A port is connected by the cable A and RS-485_B is connected to the cable B.
	Four-wire full-duplex RS-485 port (T+, T-, R+, R-)	Four-wire full-duplex 485 port. T+ and T- is the output wire; R+ and R- is the input wire.
	Control power output (CTRL 12V)	<ul> <li>Controls the 6<sup>th</sup> channel power output for alarm.</li> <li>Turns off power output when there is alarm output.</li> <li>Turns on power output when the alarm is cleared.</li> </ul>
	12V power output port	Provides power to external devices such as camera and alarm device. Note that the supplying power shall be below 1A.
	느	Ground.
10	Video input port	Connect to analog camera to input video signal.
11	Network port	Connects to Ethernet port.
12	VGA video output	Outputs analog video signal. It can connect to the monitor to view analog video.
13	RS-232 debug COM.	It is for general COM debug to configure IP address or transfer transparent COM data.

No.	Port Name	Function
	HDMI port	High definition audio and video signal output port. It outputs the
		same video source as VGA. It supports 1080P resolution output
14		and supports mouse operation and control.
		Note when the HDMI output resolution is 4K, the VGA output
		stops.
15	USB port	Connects to the external devices such as keyboard, mouse, and
15		USB storage device.
10	eSATA port	External SATA port which connects to the device with SATA port.
16		Perform the jumper configuration when connecting HDD.

	previous character.
	123 456 789 0 └ ←
	Implement special control operations such as double-click one item in the
Double-click left	file list to play back the video.
mouse button	In multiple-window mode, double-click one channel to view in full-window. Double-click current video again to go back to previous multiple-window mode.
	Right-click in live view window interface, the shortcut menu is displayed. For
Right-click	different series product, the shortcut menu may vary.
	Exit current menu without saving the modification.
	In numeral input box: Increase or decrease numeral value.
Click scroll wheel button	Switch the items in the combo box.
	Page up or page down.
Point to select and move	Select current control and move it.

Operation	Function
Dragging a	Select motion detection zone.
selection box	
with left mouse	Select privacy mask zone.
button	

# 4 Connecting Basics

This chapter introduces the typical connection diagrams and ports connections.

# 4.1 Typical Connection Diagram

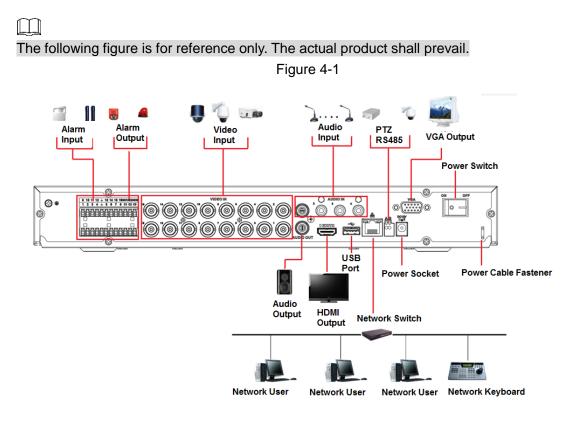

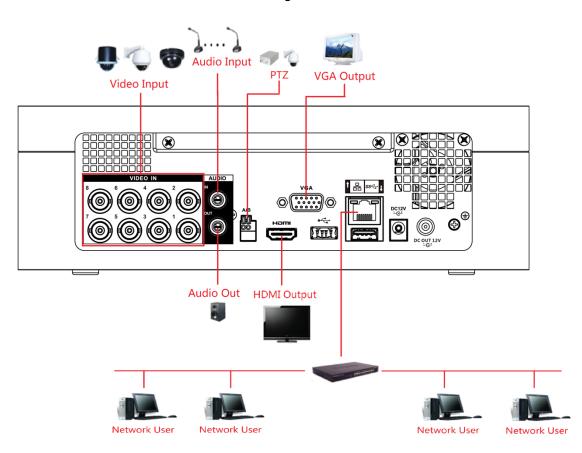

Figure 4-2

# 4.2 Connecting to Video and Audio Input and Output

## 4.2.1 Video Input

The video input interface is BNC. The input video format includes: PAL/NTSC BNC ( $1.0V_{P-P}$ ,  $75\Omega$ ).

The video signal should comply with your national standards.

The input video signal shall have high SNR, low distortion; low interference, natural color, and suitable lightness.

#### Guarantee the stability and reliability of the camera signal

The camera shall be installed in a cool, dry place away from the conditions such as direct sunlight, inflammable, and explosive substances.

The camera and the DVR should have the same grounding to ensure the normal operation of the camera.

#### Guarantee stability and reliability of the transmission line

Use high quality, sound shielded BNC. Select suitable BNC model according to the transmission distance.

If the distance is too long, you should use twisted pair cable, and you can add video compensation devices or use optical fiber to ensure video quality.

You should keep the video signal away from the strong electromagnetic interference, especially the high tension current.

#### Keep connection lugs in well contact

The signal line and shielded wire should be fixed firmly and in well connection. Avoid dry joint, lap welding, and oxidation.

## 4.2.2 Video Output

Video output includes a BNC (PAL/NTSC1.0V<sub>P-P</sub>, 75 $\Omega$ ) output, a VGA output, and HDMI output. System supports BNC, VGA and HDMI output at the same time.

When you are using pc-type monitor to replace the monitor, pay attention to the following points:

- To defer aging, do not allow the pc monitor to run for a long time.
- Regular demagnetization will keep device maintain proper status.
- Keep it away from strong electromagnetic interference devices.

Using TV as video output device is not a reliable substitution method. You also need to reduce the working hour and control the interference from power supply and other devices. The low quality TV may result in device damage.

# 4.2.3 Audio Input

This series of products audio input port adopt BNC port.

Due to high impedance of audio input, use active sound pick-up.

Audio transmission is similar to video transmission. Try to avoid interference, dry joint, loose contact and it shall be away from high tension current.

# 4.2.4 Audio Output

The audio output signal parameter is usually over 200mv 1K $\Omega$  (BNC or RCA). It can directly connect to low impedance earphone, active sound box or amplifier-drive audio output device.

If the sound box and the pick-up cannot be separated spatially, it is easy to arouse squeaking. In this case you can adopt the following measures:

- Use better sound pick-up with better directing property.
- Reduce the volume of the sound box.
- Using more sound-absorbing materials in decoration can reduce voice echo and improve acoustics environment.
- Adjust the layout of speaker and pickup to reduce squeaking.

# 4.3 Connecting to Alarm Input and Output

Read the followings before connecting.

#### Alarm input

- Make sure alarm input mode is grounding alarm input.
- Grounding signal is needed for alarm input.
- Alarm input needs the low level voltage signal.
- Alarm input mode can be either NC (Normally Closed) or NO (Normally Open).
- When you are connecting two DVRs or you are connecting one DVR and one other device, use a relay to separate them.

#### Alarm output

The alarm output port should not be connected to high power load directly (It shall be less than 1A) to avoid high current which might result in relay damage. Use the contactor to realize the connection between the alarm output port and the load.

#### How to connect PTZ decoder

- Ensure the decoder has the same grounding with DVR; otherwise the PTZ might not be controlled. Shielded twisted wire is recommended and the shielded layer is used to connect to the grounding.
- Avoid high voltage. Ensure proper wiring and some thunder protection measures.
- For too long signal wires, 120Ω should be parallel connected between A, B lines on the far end to reduce reflection and guarantee the signal quality.
- "485 A, B" of DVR cannot parallel connect with "485 port" of other device.
- The voltage between of A, B lines of the decoder should be less than 5V.

#### Make sure the front-end device has soundly earthed

Improper grounding might result in chip damage.

# 4.3.1 Introducing Alarm Port

#### $\square$

The alarm input ports are dependent on the model you purchased.

Icon	Description
1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16	ALARM 1 to ALARM 16. The alarm becomes active in low voltage.
NO1 C1, NO2 C2, NO3 C3, NO4 C4	There are four groups of normally open activation output (on/off button).
NO5 C5 NC5,	There is one group of normally open activation output (on/off button).
CTRL 12V	<ul> <li>Control power output of the alarm output channel 6. Electric current: 500mA.</li> <li>When there is an alarm output, close the power output.</li> <li>When the alarm is cancelled, open the power output.</li> </ul>
+12V	Rated power supply. Electric current: 500mA.
Ŧ	Ground cable.
485 A/B	485 communication port. They are used to control devices such as decoder. $120\Omega$ should be parallel connected between A, B lines if there are too many PTZ decoders.
T+,T-,R+,R-	Four-wire full-duplex RS-485 port. T+ T-: output wire. R+ R-: input wire.

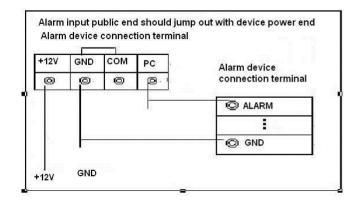

# 4.3.2 Alarm Input

Refer to the following figure for more information.

- Grounding alarm inputs which includes NO (Normally Open) and NC (Normally Closed) type.
- Parallel connect COM end and GND end of the alarm detector (Provide external power to the alarm detector).

- Parallel connect the Ground of the DVR and the ground of the alarm detector.
- Connect the NC port of the alarm sensor to the DVR alarm input (ALARM).
- Use the same ground with that of DVR if you use external power to the alarm device.

Figure 4-4

# 4.3.3 Alarm Output

- Provide external power to external alarm device.
- To avoid overloading, read the following relay parameters table carefully.
- RS-485 A/B cable is for the A/B cable of the PTZ decoder.

# 4.4 Connecting to RS-485 Port

- <u>Step 1</u> Connect the RS-485 cable of the PTZ camera to the RS-485 port on the Device. Ensure the match of A and B interfaces.
- <u>Step 2</u> Connect the video out cable of the PTZ camera to the video input port on the Device.
- <u>Step 3</u> Turn on the PTZ camera.

# 5 Local Configurations

Read the following notes prior to using the Device.

 $\square$ 

- The interfaces in the Manual are used for introducing the operations and only for reference.
   The actual interface might be different dependent on the model you purchased. If there is inconsistency between the Manual and the actual product, the actual product shall prevail.
- The Manual is a general document for introducing the product, so there might be some functions described for the Device in the Manual not apply to the model you purchased.
- Conventions for mouse operations on a menu.
  - $\diamond$  Click: On the menu, left-click the mouse once on an option to enter the option setting.
  - ♦ Right-click: On any interface, right-click the mouse once to return to the previous level.

# 5.1 Initial Settings

# 5.1.1 Booting up

- Ensure the input voltage corresponds to the power requirement of the Device. Power on the Device after the power cable is properly connected.
- To protect the Device, connect the Device with the power cable first, and then connect to the power source.
- To ensure the stable work of the Device and the external devices connected to the Device and to prolong the HDD life, it is recommended to refer to the national related standard to use the power source that provides stable voltage with less interference from ripples. UPS power source is recommended.
- Step 1 Connect the Device to the monitor.
- <u>Step 2</u> Plug in the power cable to the Device.
- <u>Step 3</u> Press the power button to turn on the Device. The power indicator light is on. On the connected monitor, the live view screen is displayed by default. If you turn on the Device during the time period that is configured for recording, the system starts recording after it is turned on, and you will see the icon indicating recording status is working in the specific channels.

# 5.1.2 Initializing the Device

When booting up for the first time, you need to configure the password information for **admin** (by default).

 $\square$ 

To secure the Device, it is strongly recommended for you to properly keep the password for admin and modify it regularly.

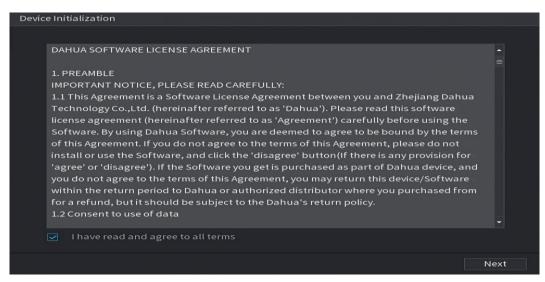

Step 1 Turn on the Device.

The Location, Language and Video Standard interface is displayed.

Figure 5-1

Device Initialization		<u> </u>	ڻ ا
Location	Please select an item.		
Language	English		
Video Standard	PAL		

- <u>Step 2</u> Select your location from the drop-down list, then language and video standard will match your location automatically. You can change the language and video standard manually.
- Step 3 Click Next.
  - The **Dahua Software License Agreement** interface is displayed. See Figure 5-2. Figure 5-2

<u>Step 4</u> Tick the check box that **I have read and agree to all terms**, and then click **Next**. The **System Zone** and **System Time** interface is displayed.

Figure 5-3

Device Initialization		
Time Zone	(UTC+04:00) Yerevan v	
System Time	2020 -01 -08 13:11:35	
	Next	

<u>Step 5</u> Select system zone, configure system time, and then click **Next**. The **Enter Password** interface is displayed.

Device Initialization

<u>Step 6</u> Configure the password information for admin. For details, see Table 5-1. Table 5-1

Parameter	Description
User	By default, the user is <b>admin</b> .
Password	In the <b>Password</b> box, enter the password for admin.
Confirm Password	The new password can be set from 8 characters through 32 characters and contains at least two types from number, letter and special characters (excluding"'", """, ";", ":" and "&").
Prompt Hint	In the <b>Prompt Hint</b> box, enter the information that can remind you of the password.
	On the login interface, click 📠, the prompt will display to help you
	find back the password.

Step 7 Click Next.

The Unlock Pattern interface is displayed.

Figure 5-5

Step 8 Draw an unlock pattern.

After the setting is completed, the **Password Protection** interface is displayed.

- The pattern that you want to set must cross at least four points.
- If you do not want to configure the unlock pattern, click Skip.
- Once you have configured the unlock pattern, the system will require the unlock pattern as the default login method. If you skip this setting, enter the password for login.

Questions	make you reset the password.

If you want to configure the email or security questions fucntion later or you want to change the configurations, select **Main Menu > ACCOUNT > Password Reset**.

<u>Step 10</u> Click **OK** to complete the settings.

The End-User License Agreement interface is displayed.

Step 11 Select I have read and agree to all terms check box.

Step 12 Click Next.

The **Startup Wizard** interface is displayed. For details about quick settings during startup, see 5.1.4.

## 5.1.3 Resetting Password

You can reset the password by the following methods when you forget the password for admin account.

- If the password reset function is enabled, you can use mobile phone to scan the QR code to reset the password. For details, see "5.1.3.2 Resetting Password on Local Interface."
- If the password reset function is disabled, there are two situations:
  - If you configured security questions, you can find back the password by the security questions.
  - If you did not configure the security questions, you can only use the reset button on the mainboard to restore the Device to factory default. For details, see "5.1.3.3 Using Reset Button on the Mainboard."

Ш

Not all models are provided with reset button.

## 5.1.3.1 Enabling Password Reset Function

<u>Step 1</u> Select Main Menu > Account > Password Reset.

The **Password Reset** interface is displayed.

Figure 5-7

点 ACCOUNT	🖿 🍪 🚐 🍫 🛡 🚣	🕩 🗸 🛄
User Group ONVIF User	Password Reset Enable Reserved Email w***@msn.com

	Question 1     What is your favorite children's book?       Answer     ************************************	
	Question 2     What was the first name of your first boss?       Answer     ************************************	
	Question 3       What is the name of your favorite fruit?         Answer       ••••••••••••••••••••••••••••••••••••	
	Apply	Back

<u>Step 2</u> Enable the Password Reset function.

This function is enabled by default.

Step 3 Click Apply to save the settings.

When Password reset function is disabled, you can retrieve password through following ways:

- You can retrieve password through resetting password on local interface or using Reset button on the mainboard when the device supports Reset button.
- You can only retrieve password through resetting password on local interface (make sure that security questions are preset) when the device does not support Reset button.

## 5.1.3.2 Resetting Password on Local Interface

Step 1 Enter the login interface.

If you have configured unlock pattern, the unlock pattern login interface is displayed. Click **Forgot Pattern**, the password login interface is displayed.

If you did not configure unlock pattern, the password login interface is displayed. Click

to display the password with plaintext.

 $\square$ 

To login from other user account, on the unlock pattern login interface, click **Switch User**; or on the password login interface, in the **User Name** list, select other users to login.

Figure 5-8

Step 4 Reset the password. QR code

Follow the onscreen instructions to get the security code in your reserved email address. In the **Security code** box, enter the security code.

- You can get the security code twice by scanning the same QR code. If you need to get the security code once again, refresh the interface.
- Use the security code received in your email box to reset the password within 24 hours; otherwise the security code becomes invalid.

Security questions

On the Reset password interface as shown in Step 3, in the Reset Type list, select Security Questions, the Security Questions interface is displayed.

If you did not configure the security questions before, in the **Reset Type** list, there will be no **Security Questions**.

2) In the **Answer** box, enter the correct answers.

Figure 5-12

# 5.1.3.3 Using Reset Button on the Mainboard

You can always use the reset button on the mainboard to reset the Device to the factory default.

Not all models are provided with reset button.

<u>Step 1</u> Disconnect the Device from power source, and then remove the cover panel. For details about removing the cover panel, see "2.2 Installing HDD."

<u>Step 2</u> Find the reset button on the mainboard, and then press and hold the reset button for 5 seconds to 10 seconds. See Figure 5-16 for the location of the reset button. Figure 5-16

<u>Step 3</u> Reboot the Device. After the Device is rebooted, the settings have been restored to the factory default. You can start resetting the password.

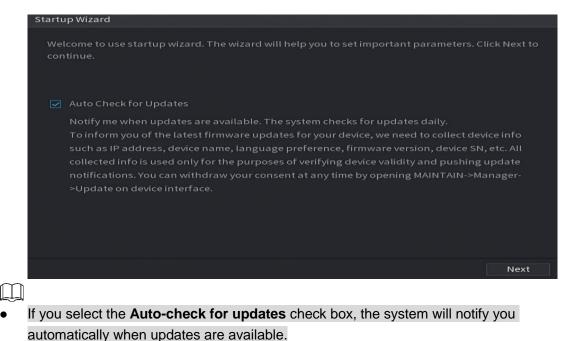

# 5.1.4 Setting Up with the Startup Wizard

## 5.1.4.1 Entering Startup Wizard

The Startup Wizard helps you configure the basic settings to set up the Device.

After you have initialized the Device, the Startup Wizard interface is displayed.

Figure 5-17

- After the auto-check function is enabled, to notify you to update timely, the system will collect the information such as IP address, device name, firmware version, and device serial number. The collected information is only used to verify the legality of the Device and push upgrade notices.
- If you clear the Auto-check for updates check box, the system will not perform automatic checks.

## 5.1.4.2 Configuring General Settings

You can configure the general settings for the Device such as Device name, language, and settings for instant playback.

You can also configure general settings by selecting **Main Menu > SYSTEM > General > Basic**.

#### <u>Step 1</u> On the **Startup Wizard** interface, click **Next**.

The **Basic** interface is displayed.

Basic				
Device Name	XVR			
Device No.	8			
Language	English			
Video Standard	PAL			
Instant Playback	5	min.		
Logout Time	10	min. Non-	login User Pe	ermission
Navigation Bar				
Mouse Pointer Speed		• +		
	Slow	Fast		
			Previous	Next

Figure 5-18

<u>Step 2</u> Configure the basic settings parameters.

Table	5-3
-------	-----

Parameter	Description
Device Name	In the <b>Device Name</b> box, enter the Device name.
Device No.	In the <b>Device No.</b> box, enter a number for the Device.
Language	In the Language list, select a language for the Device system.
Video Standard	In the Video Standard list, select PAL or NTSC according to your actual situation.
Instant Playback	In the <b>Instant Playback</b> box, enter the time length for playing back the recoded video. The value ranges from 5 to 60. On the live view control bar, click the instant playback button to play back the recorded video within the configured time.
Logout Time	In the <b>Logout Time</b> box, enter the standby time for the Device. The Device automatically logs out when it is not working for the configured time period. You need to login the Device again.

Parameter	Description		
	The value ranges from 0 to 60. 0 indicates there is not standby time for		
	the Device.		
	Click Monitor Channel(s) when logout. You can select the channels		
	that you want to continue monitoring when you logged out.		
Novigation Par	Enable the navigation bar. When you click on the live view screen, the		
Navigation Bar	navigation bar is displayed.		
Mouse Pointer Adjust the speed of double-click by moving the slider.			
Speed	The bigger the value is, the faster the double-clicking speed must be.		

### 5.1.4.3 Configuring Date and Time Settings

The **Date &Time** interface is displayed.

You can configure the system time, choose the time zone, set the daylight saving time, and enable the NTP server.

You can also configure date and time settings by selecting **Main Menu > SYSTEM > General > Date &Time**.

<u>Step 1</u> After you have configured the general settings, on the **General** interface, click **Next**.

Date&Time				
System Time	2020 -01 -08 17 :12 :52			
Time Zone	(UTC+08:00) Beijing, Chongqing,	Hong Kong,	⇒ Sa	ve
Date Format	YYYY MM DD			
Date Separator				
Time Format	24-Hour			
DST	Date 🔿 Week			
Start Time	Jan - 1 - 00:00			
End Time	Jan 👻 2 👻 00:00			
NTP				
Server Address	time.windows.com	Manual Upd	ate	
Port	123			
Interval	60			
			Previous	Next

Figure 5-19

<u>Step 2</u> Configure the settings for date and time parameters.

Table 5-4

Parameter	Description		
System Time	In the <b>System Time</b> box, enter time for the system. Click the time zone list, you can select a time zone for the system, and the time in adjust automatically.		
	Do not change the system time randomly; otherwise the recorded video cannot be searched. It is recommended to avoid the recoding period or stop recording first before you change the system time.		
Time Zone	In the <b>Time Zone</b> list, select a time zone for the system.		

Parameter	Description		
Date Format	In the Date Format list, select a date format for the system.		
Date Separator	In the <b>Date Separator</b> list, select a separator style for the date.		
Time Format	In the <b>Time Format</b> list, select <b>12-HOUR</b> or <b>24-HOUR</b> for the time display style.		
DST	Enable the Daylight Saving Time function. Click Week or click Date.		
Start Time	Configure the start time and and time for the DCT		
End Time	Configure the start time and end time for the DST.		
NTP	Enable the NTP function to sync the Device time with the NTP server.		
	If NTP is enabled, device time will be automatically synchronized with server.		
Serve Address	In the <b>Server Address</b> box, enter the IP address or domain name of the corresponding NTP server. Click <b>Manual Update</b> , the Device starts syncing with the server immediately.		
Port	The system supports TCP protocol only and the default setting is 123.		
In the <b>Interval</b> box, enter the amount of time that you want to sync time with the NTP server. The value ranges from 0 to			

### 5.1.4.4 Configuring Network Settings

You can configure the basic network settings such as net mode, IP version, and IP address of the Device.

You can also configure network settings by selecting Main Menu > NETWORK > TCP/IP.

<u>Step 1</u> After you have configured the date and time settings, on the **Date &Time** interface, click **Next**.

The **NETWORK** interface is displayed.

Figure 5-20

TCP	P/IP						
	NIC Name NIC1	IP Address	Network Single NIC	NIC Member 1	Modify	Unbind	
	IP Address 📕 MAC Address:			lt Gateway: et Mask:		MTU: 1500 Mode: Static	
	IP Version Preferred DNS Alternate DNS Default Card						
	Test					Previous	Next

<u>Step 2</u> Configure the settings for network parameters.

Parameter	Description		
IP Version	In the <b>IP Version</b> list, you can select <b>IPv4</b> or <b>IPv6</b> . Both versions are supported for access.		
MAC Address	Displays the MAC address of the Device.		
DHCP	<ul> <li>Enable the DHCP function. The IP address, subnet mask and defa gateway are not available for configuration once DHCP is enabled.</li> <li>If DHCP is effective, the obtained information will display in the Address box, Subnet Mask box and Default Gateway box. If no all values show 0.0.0.0.</li> <li>If you want manually configure the IP information, disable to DHCP function first.</li> <li>If PPPoE connection is successful, the IP address, subnet mask default gateway, and DHCP are not available for configuration.</li> </ul>		
IP Address	Enter the IP address and configure the corresponding subnet mask and		
Subnet Mask	default gateway.		
Default Gateway	IP address and default gateway must be in the same network segment.		
DNS DHCP	Enable the DHCP function to get the DNS address from router.		
Preferred DNS	In the <b>Preferred DNS</b> box, enter the IP address of DNS.		
Alternate DNS	In the Alternate DNS box, enter the IP address of alternate DNS.		
MTU	<ul> <li>In the MTU box, enter a value for network card. The value ranges from 1280 byte through 1500 byte. The default is 1500.</li> <li>The suggested MTU values are as below.</li> <li>1500: The biggest value of Ethernet information package. The value is typically selected if there is no PPPoE or VPN connection and it is also the default value of some routers, network adapted and switches.</li> <li>1492: Optimized value for PPPoE.</li> </ul>		

Parameter	Description		
	1468: Optimized value for DHCP.		
	1450: Optimized value for VPN.		
Test	Click <b>Test</b> to test if the entered IP address and gateway are interworking.		

### 5.1.4.5 Configuring P2P Settings

You can add the Device into your cell phone client or the platform to manage.

You can also configure P2P function by selecting Main Menu > Network > P2P.

Ш

Make sure the DVR is connected into the Internet, and if yes, in the **Status** box of the P2P interface, it shows **Online**.

Step 1 After you have configured the network settings, on the Network interface, click Next.

The **P2P** interface is displayed.

P2P				
After enabling P2P au address, MAC address used only for the pur If you don't agree to e box.	nd connecting to Intern s, device name, device S pose of remote access. enable P2P function, plo	ice, the P2P will be enabled. iet, we need to collect IP SN, etc. All collected info is ease deselect the check		
Status				
Mobile Client		Device SN		
		_	Previous	Next

Figure 5-21

Step 2 Enable the P2P function.

 $\square$ 

After the P2P function is enabled and connected to the Internet, the system will collects your information for remote access, and the information includes but not limited to email address, MAC address, and device serial number.

You can start adding the device.

Cell Phone Client: Use your mobile phone to scan the QR code to add the device into the Cell Phone Client, and then you can start accessing the Device.

Platform: Obtain the Device SN by scanning the QR code. Go to the P2P management platform and add the Device SN into the platform. Then you can access and manage the device in the WAN. For details, refer to the P2P operation manual.

 $\square$ 

• You can also enter the QR code of Cell Phone Client and Device SN by

clicking 📰 on the top right of the interfaces after you have entered the Main Menu.

 If selection of this function is canceled, the Note interface is displayed. See Figure 5-22. Choose to enable it or not according to your actual need.

To use this function, take adding device into Cell Phone Client as an example.

#### Adding Device into Cell Phone Client

- <u>Step 1</u> Use your cell phone to scan the QR code under Cell Phone Client to download the application.
- Step 2 On your cell phone, open the application, and then tap

The menu is displayed. You can start adding the device.

1) Tap **Device Manager**.

The **Device Manager** interface is displayed. Figure 5-23

2) Tap an the top right corner.

The interface requiring device initialization is displayed. A pop-up message reminding you to make sure the Device is initialized is displayed.

3) Tap **OK**.

- ◇ If the Device has not been initialized, Tap **Device Initialization** to perform initializing by following the onscreen instructions.
- $\diamond~$  If the Device has been initialized, you can start adding it directly.
- 4) Tap Add Device.

The Add Device interface is displayed.

You can add wireless device or wired device. The Manual takes adding wired device as an example.

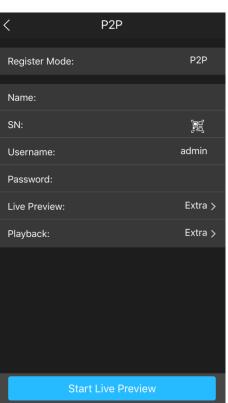

Figure 5-24

5) Tap **P2P**.

The **P2P** interface is displayed.

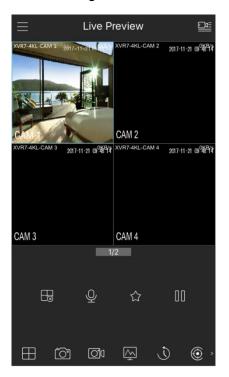

Figure 5-25

Audio	• Audio: This function is enabled by default for main stream. You			
Addio	need to manually enable it for sub stream 1. Once this function is			
	enabled, the recorded video file is composite audio and video			
	stream.			
Audio Source	• Audio Source: In the Audio Source list, you can select Local and			
	HDCVI.			
	$\diamond$ Local: The audio signal is input from Audio In port.			
	$\diamond$ HDCVI: The audio signal is input from HDCVI camera.			
Compression	• Compression: In the Compression list, select a format that you			
	need.			

### 5.1.4.7 Configuring Snapshot Settings

You can configure the basic snapshot settings such as quantity of snapshot each time, channel(s) to take snapshot, and image size and quality of snapshot.

You can also configure general settings by selecting **Main Menu > CAMERA > Encode > Snapshot**.

For more information about snapshot settings, see "5.8 Configuring Snapshot Settings."

<u>Step 1</u> After you have configured the encode settings, on the **Encode** interface, click **Next**. The **Snapshot** interface is displayed.

Figure 5-28

Snapshot				
Manual Snapshot	1	▼ /Time		
Channel	1			
Туре	Scheduled			
Size	352x288(CIF)			
Quality	4			
Interval	1 sec.			
Default Copy t	0		Previous	Next

<u>Step 2</u> Configure the settings for the snapshot parameters.

Parameter	Description
Manual Snapshot	In the <b>Manual Snapshot</b> list, select how many snapshots you want to take each time.
Channel	In the <b>Channel</b> list, select the channel that you want to configure the settings for.
Туре	<ul> <li>In the Mode list, you can select Human Face, Event, or General as the event type for which you want to take a snapshot.</li> <li>Scheduled: The snapshot is taken during the scheduled period.</li> <li>Event: The snapshot is taken when there is an alarm event occurs, such as motion detection event, video loss, and local alarms.</li> <li>Face Snapshot: The snapshot is taken when the face is detected. The face detection function is support only with the Channel 1.</li> </ul>
Size	In the <b>Size</b> list, select a value for the image. The bigger the value is, the better the image will become.
Quality	Configure the image quality by 6 levels. The higher the level is, the better the image will become.
Interval	Configure or customize the snapshot frequency.

### 5.1.4.8 Configuring Basic Storage Settings

You can configure the settings for the situations when HDD is full, file length and time length of recorded video, and the settings if to auto-delete the old files.

You can also configure basic storage settings by selecting **Main Menu > STORAGE > Basic**. <u>Step 1</u> After you have configured the encode settings, on the **Snapshot** interface, click **Next**. The **Basic** interface is displayed.

Figure 5-29

Basic				
Disk Full	Overwrite 🔻			
Create Video Files	Time Length 🚽	60	min.	
Delete Expired Files	Never -			
			Previous Next	

Parameter	Description
Disk Full	<ul> <li>Configure the settings for the situation when all the read/write discs are full, and there are no more free discs.</li> <li>Select Stop to stop recording</li> <li>Select Overwrite to overwrite the recorded video files always from the earliest time.</li> </ul>
	The locked recorded video files will not be overwritten.
Create Video Files	Configure the time length and file length for each recorded video.
Delete Expired Files	Configure whether to delete the old files and if yes, in the <b>Delete</b> <b>Expired Files</b> list, select <b>Custom</b> to configure the time length for how long you want to keep the old files.

### 5.1.4.9 Configuring Recorded Video Storage Schedule

You can configure the schedule for the recorded video such as channels to record, alarm settings, and the armed period.

You can also configure recorded video storage settings by selecting **Main Menu > STORAGE > Schedule > Record**.

<u>Step 1</u> After you have configured the basic storage settings, on the **Basic** interface, click **Next**. The **Record** interface is displayed.

Figure	5-30

Channel A1		⇒ Pr	e-Rec	ord	4 5	sec.								
	🛃 Gen	eral	Mc	otion		Alarn		м	&A		🔳 In	itelli		PO:

🗆 Wed													*	⇔
🗆 Thu													*	
🗆 Fri													*	÷
🗆 Sat													*	æ
Default	Copy t										Previo			Next

Parameter	Description
Channel	In the <b>Channel</b> list, select a channel to record the video.
Pre-record	In the <b>Pre-record</b> list, enter the amount of time that you want to start
Redundancy	<ul> <li>the recording in advance.</li> <li>If there are several HDDs installed to the Device, you can set one of the HDDs as the redundant HDD to save the recorded files into different HDDs. In case one of the HDDs is damaged, you can find the backup in the other HDD.</li> <li>Select Main Menu &gt; STORAGE &gt; Disk Manager, and then set a HDD as redundant HDD.</li> <li>Select Main Menu &gt; STORAGE &gt; Schedule &gt; Record, and then select the Redundancy check box.</li> <li>If the selected channel is not recording, the redundancy function takes effect next time you record no matter you select the check box or not.</li> <li>If the selected channel is recording, the current recorded files will be packed, and then start recording according to the new schedule.</li> <li>Not all models support this function.</li> <li>The redundant HDD only back up the recorded videos but not snapshots.</li> </ul>
Event type	Select the check box of the event type which includes <b>General</b> , <b>Motion</b> (motion detect, video loss, tempering, diagnosis), <b>Alarm</b> (IoT alarms, local alarms, alarms from alarm box, IPC external alarms, IPC Offline alarms), <b>M&amp;A</b> , <b>Intelligent</b> (IVS events, face detection), and <b>POS</b> .

Parameter	Description
Period	Define a period during which the configured recording setting is active.
	The system only activates the alarm in the defined period.
Сору	Click <b>Copy to</b> to copy the settings to other channels.

<u>Step 3</u> Define the video recording period by drawing or editing. By default, it is active all the time.

Define the period by drawing.

1) Select the check box of event type.

Figure 5-31

🛃 General	Motion	📕 Alarm	M&A	📕 Intelligent	POS

- 2) Define a period. The system supports maximum six periods.

  - $\diamond$  Define for several days of a week: Click  $\square$  before each day one by one, the

icon switches to . You can define the period for the selected days simultaneously.

3) On the timeline, drag to define a period. The Device starts recoding the selected event type in the defined period.

Figure 5-32

The color bar indicates the event type that is effective in a defined period:

- Recording priority in case of event types are overlapped: M&A > Alarm > Intelligent > Motion > General.
- Select the check box of event type, and then click for the defined period.
- When selecting MD&Alarm, the MD and Alarm check boxes will be cleared respectively.

Define the period by editing. Take Sunday as an example.

1) Click

The **Period** interface is displayed.

Figure 5-33

Period								
Day								
Period 1	00:00	- 24: 00	🖌 General	Motion	🗌 Alarm	M&A	🗌 Inte	POS
Period 2	03:00	- 08: 00	General	🗹 Motion	Alarm	M&A	🗌 Inte	POS
Period 3	10:00	- 14: 00	🗌 General	🗹 Motion	Alarm	M&A	🗌 Inte	POS

Copy to								
🗌 All								
🖂 Sun	🗌 Mon	🗌 Tue	Wed	🗌 Thu	🗌 Fr			Holiday
							OK	Cancel

- 2) Enter the time frame for the period and select the event check box.
  - $\diamond$  There are six periods for you to set for each day.
  - ♦ Under Copy to, select All to apply the settings to all the days of a week, or select specific day(s) that you want to apply the settings to.
- 3) Click **OK** to save the settings.
- <u>Step 4</u> Click **OK** to complete the settings.

 $\square$ 

- Click Copy to copy the settings to other channels.
- After configuring the recording schedule settings, you need to perform the following operations to start recording according to the defined schedule.
  - Enable the alarm event and cofigure the settings for the recording channel.
     For details, see "5.10 Alarm Events Settings."
  - You need to enable the recording function, see "5.9.1 Enabling Record Control."

### 5.1.4.10 Configuring Snapshot Storage Schedule

You can configure the storage schedule for the snapshot such as channels to take snapshot, alarm settings, and the armed period.

You can also configure snapshot storage settings by selecting **Main Menu > STORAGE >** Schedule > Snapshot.

<u>Step 1</u> After you have configured the video recording settings, on the **Record** interface, click **Next**.

The **Snapshot** interface is displayed.

Figure	5-34

Parameter	Description
Channel	In the <b>Channel</b> list, select a channel to take a snapshot.
Event type	Select the check box of the event type which includes General,
Event type	Motion, Alarm, M&A, Intelligent, and POS.
	Define a period during which the configured snapshot setting is active.
Period	For details about defining a period, see "5.1.4.9 Configuring Recorded
	Video Storage Schedule."
Сору	Click <b>Copy to</b> to copy the settings to other channels.

Step 3 Click OK.

A pop-up message is displayed.

Step 4 Click OK.

The live view screen is displayed. The setting up with startup wizard is completed. You can start using the Device.

<u>Step 5</u> (Optional) After the setting with startup wizard is completed, if the connected HDMI display resolution is inconsistent with default resolution (1280\*1024), a dialog box will pop up. See Figure 5-35. Choose to switch the resolution or not.

Figure 5-35

# 5.2 Live View

After you logged in the Device, the live view is displayed. The number of channels displayed depends on your model.

To enter the live view screen from other interfaces, click

on the top right of the screen.

Figure 5-36

## 5.2.1 Live View Screen

You can view the live video from the connected cameras through each channel on the screen.

 By default, the system time, channel name and channel number are displayed on each channel window. This setting can be configured by selecting Main Menu > CAMERA > Overlay > Overlay. • The figure in the bottom right corner represents channel number. If the channel position is changed or the channel name is modified, you can recognize the channel number by this figure and then perform the operations such as record query and playback.

For the icons displayed on each channel, see Table 5-11.

#### Table 5-11

lcon	Function
	Indicates recording status. This icon displays when the video is being recorded.
*	This icon displays when the motion detection occurs in the scene.
?	This icon displays when the video loss is detected.
6	This icon displays when the channel monitoring is locked.
<u></u>	· · · · · · · · · · · · · · · · · · ·

To switch the position of two channels, point to one of the two channels, and then drag the window to the other channel.

### 5.2.2 Live View Control Bar

The live view control bar provides you access to perform the operations such as playback, zoom, real-time backup, manual snapshot, voice talk, adding remote devices, and streams switch.

When you move the pointer to the top middle position of a channel window, the live view control bar is displayed. See Figure 5-37 for analog channel and 0 for digital channel.

If there is no operation for six seconds after the control bar is displayed, the control bar hides automatically.

Local Configurations 78

Figure 5-38

Table 5-12

1	Instant Playback	4	Manual Snapshot	7	Camera Registration		
2	Digital Zoom	5	Mute	/	/		
3	Instant Record	6	Audio Talk	/	/		

### 5.2.2.1 Instant Playback

You can play back the previous five minutes to sixty minutes of the recorded video.

By clicking **b**, the instant playback interface is displayed. The instant playback has the following features:

- Move the slider to choose the time you want to start playing.
- Play, pause and close playback.
- The information such as channel name and recording status icon are shielded during instant playback and will not display until exited.
- During playback, screen split layout switch is not allowed.
- To change the playback time, select **Main Menu > SYSTEM > General > Basic**, in the **Instant Play** box, enter the time you want to play back.

🗱 SYSTEM		👝 🍇 🔽 🔔 💷

		Apply Back

#### Figure 5-39

### 5.2.2.2 Digital Zoom

You can enlarge a specific area of the image to view the details by either of the following two ways.

• Click 🛃, the icon switches to <a>Image</a>. Hold down the left mouse button to select the area you want to enlarge. The area is enlarged after the left mouse button is released.

• Point to the center that you want to enlarge, rotate the wheel button to enlarge the area.

- For some models, when the image is enlarged in the first way described previously, the selected area is zoomed proportionally according to the window.
- When the image is in the enlarged status, you can drag the image toward any direction to view the other enlarged areas.
- Right-click on the enlarged image to return the original status.

### 5.2.2.3 Instant Record

You can record the video of any channel and save the clip into a USB storage device.

By clicking *w*, the recording is started. To stop recording, click this icon again. The clip is automatically saved into the connected USB storage device.

### 5.2.2.4 Manual Snapshot

You can take one to five snapshots of the video and save into a USB storage device.

By clicking **I**, you can take snapshots. The snapshots are automatically saved into the connected USB storage device. You can view the snapshots on your PC.

 $\square$ 

To change the quantity of snapshots, select **Main Menu > CAMERA > Encode > Snapshot**, in the **Manual Snapshot** list, select the snapshot quantity.

### 5.2.2.5 Mute (Analog channel only)

You can mute the video sound by clicking . This function is supported in single-channel view.

5.2.2.6 White Light (Supported on camera with white light function)

Click I to manually control the camera to turn on the white light function.

### 5.2.2.7 Siren (Supported on camera with siren function)

Click Click to manually control the camera to generate alarm sound.

### 5.2.2.8 Two-way Talk (Digital channel only)

You can perform the voice interaction between the Device and the remote device to improve efficiency of emergency. This function is supported only when the remotely connected IPC device supports two-way talk.

- Click , the icon switches to , the two-way talk of the remote device is turned on. The two-way talk of other digital channels is disabled.
- Click with to cancel the two-way talk. The two-way talk of other digital channels is resumed.

### 5.2.2.9 Adding Camera (Digital channel only)

You can view the information of remote devices and add new remote devices to replace the current connected devices.

By clicking E, the **Camera List** interface is displayed. For details about adding the remote devices, see "5.6 Configuring Remote Devices."

## 5.2.3 Navigation Bar

You can access the functions to perform operations through the function icons on the navigation bar. For example, you can access Main Menu and switch window split mode. See Figure 5-40.

 $\square$ 

The navigation bar is disabled by default. It does not appear in the live view screen until it is enabled. To enable it, select **Main Menu > SYSTEM > General > Basic**, enable the Navigation Bar, and then click **Apply**.

Figure 5-40

lcon	Function
1	Open <b>Main Menu</b> .
	Expand or condense the navigation bar.
	Select view layout.
€.	Go to the previous screen.
Ð	Go to the next screen.
t,	Enable tour function. The icon switches to
	Open the PTZ control panel. For details, see "5.4 Controlling PTZ Cameras."
Ø	Open the <b>Image</b> interface.
Q	This function is supported only in single-channel layout. Open the record search interface. For detail, see "5.9 Playing Back Video."
A	Open the <b>Alarm Status</b> interface to view the device alarm status. For details, see "5.21.3 Viewing Alarm Status Information."
ĥ	Open the <b>CHANNEL INFO</b> interface to display the information of each channel.
<b>97</b> 4	Open the <b>Camera List</b> interface. For details, see "5.6.1 Adding Remote Devices."
	Open the <b>Network</b> interface. For details, see "5.15.1 Configuring Network Settings."
	Open the <b>Disk Manager</b> interface. For details, see "5.18.3 Configuring Disk Manager."

Table 5-13

Icon	Function
	Open the USB Management interface. For details about USB
	operations, see "5.14.2 Backing up Files", "5.21.2 Viewing Log
	Information", "5.20.4 Exporting and Importing System Settings",
	"5.20.6 Updating the Device."

## 5.2.4 Shortcut Menu

You can quickly access some function interfaces such as main menu, record search, PTZ setting, color setting and select the view split mode.

Right-click on the live view screen, the shortcut menu is displayed. For details about the functions of shortcut menu, see 5.2.4.

 $\square$ 

After you access any interface through shortcut menu, you can return to the previous screen by right-clicking on the current screen.

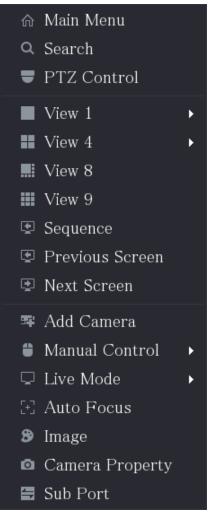

Figure 5-41

Table 5-14

Function	Description
Main Menu	Open Main Menu interface.

Function	Description				
Search	Open the PLAYBACK interface where you can search and play				
Search	back record files.				
PTZ	Open the <b>PTZ</b> interface.				
View Layout	Configure the live view screen as a single-channel layout multi-channel layout.				
Previous Screen	Click Previous Screen to go to the previous screen. For example, if				
Next Screen	you are using 4-split mode, the first screen is displaying the channel 1-4, click <b>Next screen</b> , you can view channel 5-8.				
	Open the <b>Camera List</b> interface.				
Add Camera	This parameter displays on the right-click menu only after setting at				
	least one channel to IP type in Main Menu > CAMERA > Channel				
	Туре.				
	• Select Record Mode, you can configure the recording mode				
Manual Control	as Auto or Manual, or stop the recording. You can also enable				
	or disable snapshot function				
	• Select Alarm Mode, you can configure alarm output settings.				
	• Select <b>General</b> , the layout of live view screen is as default.				
Live Mode	• Select Face, the detected face snapshots are displayed in the				
	bottom of the live view screen.				
	Point to the channel window and right-click on it to open the				
	shortcut menu, and then click Auto Focus.				
Auto Focus					
	Not all cameras support this function.				
	Open the Image interface where you can adjust the video image				
Image	color.				
Camera Property	Click to modify the camera properties.				
Sub Port	Click to switch to extra screen control.				

# 5.2.5 Channel Sequence

You can adjust the channel sequence displayed on live interface on actual needs.

The live view interface displays the default channel sequence after restoring factory defaults. <u>Step 1</u> Right-click on the live view interface and select **Sequence**.

The **Sequence** interface is displayed.

 $\square$ 

- The system displays the maximum number of window splits supported by the DVR after **selecting** Sequence.
- The Sequence interface displays only the channel name and channel number of

added remote devices. 🞴 represents the remote device is online, and 📕

represents the remote device is offline.

#### Figure 5-42 Sequence

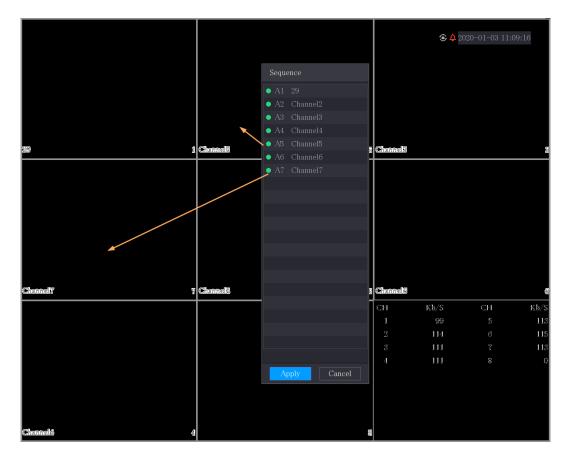

Sequence					
• A1	29				
• A2	Channel2				
• A3	Channel3				
• A4	Channel4				
• A5	Channel5				
• A6	Channel6				
• A7	Channel7				
A	oply	Cancel			

<u>Step 2</u> Adjust channel sequence.

- Drag a channel to the target window split.
- Drag a window split to another to change the sequence.

You can view the channel sequence according to the channel number on the lower-right corner of the window split.

## 5.2.6 Color Setting

You can adjust the video image color effect such as sharpness, brightness, and contrast. The parameters are different according to the connected camera type. Take analog channel as an example.

 $\square$ 

Parameters displayed on the interface vary from different cameras, the actual interface shall prevail.

In the live view screen, right-click on the analog channel to see the shortcut menu, and then select **Image**, the **Image** interface is displayed.

For details, see "5.5.1 Configuring Image Settings."

Figure 5-44

Image				
Period	Period 1			
Effective Time	00 : 00	- 24 :00		
Saturation	•	+	50	
Brightness	0	+	50	
Contrast	0	+	50	
Hue	0	+	50	
Sharpness	0	+		
Color Mode	Standard			
Position	•	+	16	
Custom	Default	Apply		Back

Table 5-15

Parameter	Description			
Period	Divide 24 hours into two periods and configure the corresponding			
Fellou	color settings.			
Effective Time	Enable the function and then set the effective time for each period.			
	Adjust the sharpness of image edge. The bigger the value is, the			
Sharpness	more obvious the image edge, and the noise is also greater.			
	The value ranges from 1 to 15. The default value is 1.			
Hue	Adjust the hue of image. The value ranges from 0 to 100. The			
пие	default value is 50.			
	Adjust the image brightness. The value ranges from 0 to 100. The			
	default value is 50.			
	The bigger the value is, the brighter the image will become. You			
Brightness	can adjust this value when the image as a whole looks dark or			
	bright. However, the image is likely to become dim if the value is			
	too big.			
	The recommended range is between 40 and 60.			

Parameter	Description	
Contrast	Adjust the image contrast. The bigger the value is, the more obvious the contrast between the light area and dark area will become. You can adjust this value when the contrast is not obvious. However, if the value is too big, the dark area is likely to become darker and the light area over exposed. If the value is too small, the image is likely to become dim. The value ranges from 0 to 100. The default value is 50. The recommended range is between 40 and 60.	
Saturation	<ul><li>Adjust the color shades. The bigger the value, the lighter the color will become. This value does not influence the general image lightness.</li><li>The value ranges from 0 to 100. The default value is 50. The recommended range is between 40 and 60.</li></ul>	
Color Mode	In the Color Mode list, you can select Standard, Soft, Bright, Vivid, Bank, Customized 1, Customized 2, Customized 3, and Customized 4. The sharpness, hue, brightness, contrast and saturation will adjust automatically according to the selected color mode.	
EQ	<ul> <li>Enhance the image effect. Adjust the effect value.</li> <li>Click , image is adjusted to the optimized effect automatically.</li> <li>Click , the current effect setting will be locked.</li> <li>Only HD analog channel supports this function.</li> </ul>	
Position Adjust the display position of the image in the channel wind value indicates pixel. The default value is 16. This function is only supported by analog channel.		
Custom	<ol> <li>You can customize four color modes.</li> <li>Click Custom. The Custom Color interface is displayed.</li> <li>In the Color Mode list, select Customized 1, for example. Then configure the settings for sharpness, hue, brightness, contrast and saturation. If you select All, the configuration will applies to all four customized color modes.</li> <li>Click OK.</li> <li>On the Image interface, in the Color Mode list, you can select the customized color mode.</li> </ol>	

## 5.2.7 Live View Display

### 5.2.7.1 Configuring Display Settings

You can configure the display effect such as displaying time title and channel title, adjusting image transparency, and selecting the resolution.

#### <u>Step 1</u> Select Main Menu > DISPLAY > Display.

The **Display** interface is displayed.

🛄 DISPLAY	🛇 💄	🔉 🖡 🕥 🦪	) 🗘 📮 🎧	
> Display

		1280x1024		
		General		
				Apply Back

Figure 5-45

<u>Step 2</u> Configure the settings for the display parameters.

Table 5-16

Parameter		Description
	Output Port	Indicates the main screen port.
		Select the Time Title check box, the current system time
	Time Title	displays in each channel window in live view screen. To hide
		the time, clear the check box.
	Channel Title	Select the Channel Title check box, the channel name,
Main Screen		channel number and recording status display in each channel
		window in live view screen. To hide the time, clear the check
		box.
	Original Ratio	Select the Original Ratio check box, the video image
		displays in its actual size in the channel window.
	Al Rule	Select the AI Rule check box to enable AI rule function.
	SMD Preview	Select the SMD Preview check box to enable SMD preview

Paramet	er	Description
		function.
	Live Audio	Select the Live Audio check box to enable the audio adjustment function in the channel window on the live view
	Volume	screen. Move the slider to adjust the volume of live audio.
	Transparency	Configure the transparency of the graphical user interface (GUI). The higher the value, the more transparent the GUI becomes.
	Resolution	Select resolution for the video. The default resolution for VGA port and HDMI port is 1280×1024.
		Some of the resolution options might not be supported on the HDMI port.
	Live Mode	<ul> <li>General: No information is displayed on the channel window.</li> <li>Face: Displays the detected face snapshots taken as a result of face detection on the bottom of the live view screen.</li> <li>Not all models support this function.</li> </ul>
	Enable	Enable extra screen function. After this function is enabled, you can select which port as extra screen port, and the other port automatically becomes the main screen port.
Sub Screen	Output Port	Select the VGA port or HDMI port as the port connected by a secondary monitor. For example, if you select HDMI port as the extra screen port, the VGA port automatically becomes the main screen port. A device that supports HDMI2 can only select HDMI2.
	Resolution	Select resolution for the video. The default resolution for VGA port and HDMI port is 1280×720.
	Show	After it is enabled, the sub screen will display alarm message
	Message	when an alarm is triggered.
• If yo		not display on the extra screen. the extra screen function, both the VGA port and HDMI port
uispi	ay the same inta	yo.

### 5.2.7.2 Configuring Zero-Channel Settings

You can view several video sources on one channel on the web end.

<u>Step 1</u>	Select Main	Menu >	DISPLAY :	> Zero-Channel.
---------------	-------------	--------	-----------	-----------------

The Zero-Channel interface is displayed.

📃 DISPLAY	🛇 💄 🖉	۶ 🖡 🕥 🦚	🗘 📮 🎧	
Display				
Tour Setting		H.264H		
> Zero-Channel		704x576(D1)		
		25		
		1024		
				Apply Back

Figure 5-46

<u>Step 2</u> Configure the settings for the zero-channel parameters.

Table 5-17

Parameter	Description		
Enable	Enable zero-channel function.		
Compression	In the <b>Compression</b> list, select the video compression standard according to the device capability. The default is H.264.		
Resolution In the <b>Resolution</b> list, select the video resolution. The defaution $704 \times 576$ (D1).			
Frame Rate (FPS)	Select a value between 1 and 25 for PAL standard, and between 1 and 30 for NTSC standard. The actual arrange is decided and selected dependent on the Device capability.		
Bit Rate (Kb/S)	The default value is 1024Kb/S. The actual arrange is decided and selected dependent on the Device capability and frame rate.		

<u>Step 3</u> Click **Apply** to save the settings.

In the live interface on the web, click  $\square \square \square$  to select one of the multi-channel modes, and then you can view the local video image.

### 5.2.7.3 Configuring TV

 $\square$ 

Not all models support this function.

You can adjust the border margins in top, bottom, left and right directions as well as the brightness of the monitor connected to the Video out port of the Device.

<u>Step 1</u> Select Main Menu > DISPLAY > TV Adjust.

The **TV Adjust** interface is displayed.

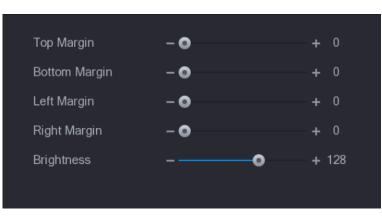

Figure 5-47

- <u>Step 2</u> Configure the parameters according to your actual situation.
- <u>Step 3</u> Click **Apply** to complete the settings.

### 5.2.8 Configuring Tour Settings

You can configure a tour of selected channels to repeat playing videos. The videos display in turn according to the channel group configured in tour settings. The system displays one channel group for a certain period and then automatically changes to the next channel group.

<u>Step 1</u> Select Main Menu > DISPLAY > Tour Setting.

The **Tour Setting** interface is displayed. There are **Main Screen** tab and **Sub Screen** tab.

Go to the P2P management platform and add the Device SN into the platform. Then you can access and manage the device in the WAN. For details, refer to the P2P operation manual. You can also configure P2P function in the local configurations. See "5.1.4.5 Configuring P2P Settings."</li> </ul>

# 5.4 Controlling PTZ Cameras

PTZ is a mechanical platform that carries a camera and a protective cover and performs overall control remotely. A PTZ can move in both horizontal and vertical direction to provide all-around view to the camera.

 $\square$ 

Before operating PTZ, ensure the network connection between PTZ and the Device.

# 5.4.1 Configuring PTZ Connection Settings

You need to configure the PTZ connection settings before use.

- Local connection: RS-485 Port for connecting speed dome or coaxial cable for connecting coaxial camera.
- Remote connection: local area network.
- <u>Step 1</u> Select Main Menu > CAMERA > PTZ.

The **PTZ** interface is displayed.

Figure 5-56

Table 5-22

Parameter	Description
Channel	In the Channel list, select the channel that you want to connect the PTZ
Channel	camera to.
	Local: Connect through RS-485 port or coaxial cable.
Туре	Remote: Connect through network by adding IP address of PTZ
	camera to the Device.
	In the Control Mode list, select Serial Port or HDCVI. For HDCVI series
Control Mode	product, select <b>HDCVI</b> . The control signal is sent to the PTZ through the
	coaxial cable. For the serial mode, the control signal is sent to the PTZ
	through the RS-485 port.
Protocol	In the <b>Protocol</b> list, select the protocol for the PTZ camera. For example,
	select HDCVI3.0.
	In the <b>Address</b> box, enter the address for PTZ camera. The default is 1.
Address	The entered address must be the same with the address configured on
	the PTZ camera; otherwise the PTZ camera cannot be controlled from
	the Device.
Baud Rate	In the Baud Rate list, select the baud rate for the PTZ camera. The
Dauu Kale	default is 9600.
Data Bits	The default value is 8.
Stop Bits	The default value is 1.
Parity	The default value is NONE.

<u>Step 3</u> Click **Apply** to save the settings.

 $\square$ 

Click Copy to to copy the settings to other channels.

# 5.4.2 Working with PTZ Control Panel

PTZ control panel performs the operations such as directing camera in eight directions, adjusting zoom, focus and iris settings, and quick positioning.

## **Basic PTZ Control Panel**

Right-click on the live view screen and then select **PTZ Control**. The PTZ control panel is displayed.

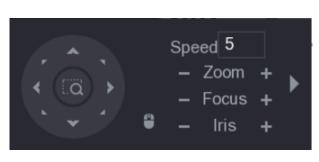

Figure 5-57

 $\square$ 

#### The functions with buttons in gray are not supported by the system. Table 5-23

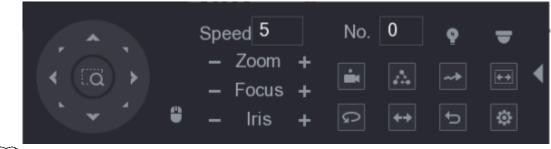

Parameter	Description
Speed	Controls the movement speed. The bigger the value is, the faster the movement will be.
Zoom	Zoom out.
	E Zoom in.
Focus	E: Focus far.
	+ Focus near.
Iris	E: Image darker.
	: Image brighter.
PTZ movement	Supports eight directions.

Parameter	Description		
	<ul> <li>Fast positioning button.</li> <li>Positioning: Click to enter the fast positioning screen, and then click anywhere on the live view screen, the PTZ will turn to this point and move it to the middle of the screen.</li> <li>Zooming: On the fast positioning screen, drag to draw a square on the view. The square supports zooming.</li> <li>Dragging upward is to zoom out, and dragging downward is to zoom in.</li> <li>The smaller the square, the larger the zoom effect.</li> <li>Not all models support this function and can only be controlled through mouse operations.</li> </ul>		
-	Click , you can control the four directions (left, right, up, and down) PTZ movement through mouse operation.		
•	Click to open the expanded PTZ control panel.		

## Expanded PTZ Control Panel

On the basic PTZ control panel, click to open the expanded PTZ control panel to find more options. See Figure 5-58.

Figure 5-58

- The functions with buttons in gray are not supported by the system.
- Right-click once to return to the interface of PTZ basic control panel.

Table 5-24

# 5.4.3 Configuring PTZ Functions

## 5.4.3.1 Configuring Presets

Step 1 On the Expanded PTZ Control Panel, click

The **Preset** interface is displayed.

PTZ							
Preset	Tour	Pattern	Scan				
		Pres	et 1				
4			Setting				
	V		lete Preset				

Figure 5-59

- Step 2 Click the direction arrows to the required position.
- <u>Step 3</u> In the **Preset** box, enter the value to represent the required position.
- <u>Step 4</u> Click **Setting** to complete the preset settings.

## 5.4.3.2 Configuring Tours

Step 1 On the Expanded PTZ Control Panel, click

The **PTZ** interface is displayed.

- <u>Step 2</u> Click the **Tour** tab.
  - The **Tour** interface is displayed.

Figure 5-60

PTZ					
Preset	Tour	Pattern		So	ean
				et r No. .dd Pre	1 0 eset
		Delete Preset		eset	
		D	elete T	our	

- <u>Step 3</u> In the **Tour No**. box, enter the value for the tour route.
- <u>Step 4</u> In the **Preset** box, enter the preset value.
- Step 5 Click Add Preset.

A preset will be added for this tour.

 $\square$ 

- You can repeat adding more presets.
- Click **Delete Preset** to delete the preset for this tour. This operation can be repeated to delete more presets. Some protocols do not support deleting.

## 5.4.3.3 Configuring Patterns

Step 1 On the Expanded PTZ Control Panel, click

The **PTZ** interface is displayed.

- Step 2 Click the Pattern tab.
  - The **Pattern** interface is displayed.

PTZ			
Preset	Tour	Pattern	Scan
		Pat	tern 1
	<b>v</b>		Start End

- <u>Step 3</u> In the **Pattern** box, enter the value for pattern.
- <u>Step 4</u> Click **Start** to perform the directions operations. You can also go to the PTZ Control Panel to perform the operations of adjusting zoom, focus, iris, and directions.
- <u>Step 5</u> On the **PTZ** interface, click **End** to complete the settings.

## 5.4.3.4 Configuring Scan

Step 1 On the Expanded PTZ Control Panel, click

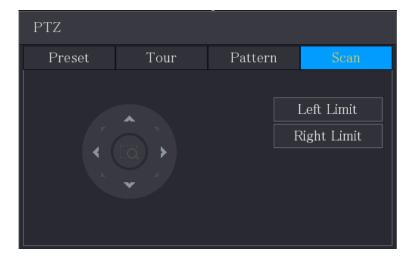

The **PTZ** interface is displayed.

Step 2 Click the Scan tab.

The Scan interface is displayed.

Figure 5-62

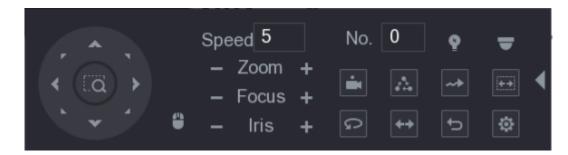

Step 3 Click the direction arrows to position the left and right limits.

# 5.4.4 Calling PTZ Functions

After you have configured the PTZ settings, you can call the PTZ functions for monitoring from the Expanded PTZ Control Panel.

Figure 5-63

### 5.4.4.1 Calling Presets

Step 1 On the Expanded PTZ Control Panel, in the No. box, enter the value of the preset that you want to call.

<u>Step 2</u> Click to call the preset.

Step <u>3</u> Click again to stop calling the preset.

### 5.4.4.2 Calling Tours

- <u>Step 1</u> On the Expanded PTZ Control Panel, in the **No.** box, enter the value of the tour that you want to call.
- Step 2 Click to call the tour.
- Step 3 Click again to stop calling the tour.

#### 5.4.4.3 Calling Patterns

- <u>Step 1</u> On the Expanded PTZ Control Panel, in the **No.** box, enter the value of the pattern that you want to call.
- Step 2 Call to call the pattern.

The PTZ camera moves according to the configured pattern repeatedly.

Step 3 Click again to stop calling the pattern.

#### 5.4.4.4 Calling Scan

- <u>Step 1</u> On the Expanded PTZ Control Panel, in the **No.** box, enter the value of the border that you want to call.
- Step 2 Click

The PTZ camera performs scanning according to the configured borders.

Step 3 Click again to stop auto scanning.

## 5.4.4.5 Calling Pan

Step 1 On the Expanded PTZ Control Panel, click 2 to start moving in horizontal direction.

Step 2 Click again to stop moving.

## 5.4.4.6 Using Auxiliary Button

On the Expanded PTZ Control Panel, click [19], the AUX setting interface is displayed.

- In the **Shortcut Aux** list, select the option that corresponds to the applied protocol.
- In the Aux No. box, enter the number that corresponds to the AUX switch on the decoder.

#### Figure 5-64

Auxiliary			
Shortcut Aux			
NONE 🔻	On	Off

1	On	Off	

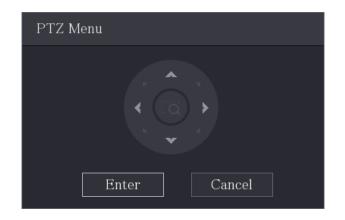

# 5.4.5 Calling OSD Menu

For the coaxial camera, you can call the OSD menu through the Expanded PTZ Control Panel.

Step 1 On the Expanded PTZ Control Panel, click

The **PTZ Menu** interface is displayed.

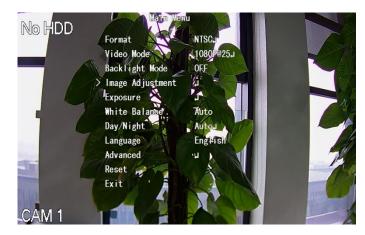

Figure 5-65

Step 2 Click Enter.

The OSD menu is displayed.

Figure 5-66

<u>Step 3</u> On the **PTZ Menu** interface, click the arrow button to select the onscreen parameters. <u>Step 4</u> Click **Enter** to complete the settings.

# 5.5 Configuring Camera Settings

# 5.5.1 Configuring Image Settings

You can configure the image settings such as saturation, contrast, brightness, sharpness for each connected camera.

#### <u>Step 1</u> Select Main Menu > CAMERA > Image.

The **Image** interface is displayed. See Figure 5-67 for analog channel and 0 for digital channel.

Figure 5-68

<u>Step 2</u> Configure the settings for the image parameters.

On the digital channel interface, click More to display more parameters.

Table 5-25

Parameter	Description				
Channel	In the Channel list, select the channel that you want to configure.				
Cable Type	In the <b>Cable Type</b> list, select the cable type that the camera uses.				
	Not all models support this function.				
Period	In the Period list, select a time period for the image settings. The				
T enou	image settings will be only used during the selected period.				
	Enable the effective function.				
Effective Time	In the Effective Time box, enter the start time and end time for the				
	period you selected.				
	Adjusts the color shades. The bigger the value, the lighter the color				
	will become. This value does not influence the general image				
Saturation	lightness.				
	The value ranges from 0 to 100. The default value is 50. The				
	recommended range is between 40 and 60.				

Parameter	Description
	Adjusts the image contrast. The bigger the value is, the more obvious
	the contrast between the light area and dark area will become. You
	can adjust this value when the contrast is not obvious. However, if the
Contract	value is too big, the dark area is likely to become darker and the light
Contrast	area over exposed. If the value is too small, the image is likely to
	become dim.
	The value ranges from 0 to 100. The default value is 50. The
	recommended range is between 40 and 60.
	Adjusts the image brightness. The bigger the value is, the brighter the
	image will become. You can adjust this value when the image as a
Prightnoss	whole looks dark or bright. However, the image is likely to become dim
Brightness	if the value is too big.
	The value ranges from 0 to 100. The default value is 50. The
	recommended range is between 40 and 60.
Hue	Adjusts the hue of image. The value ranges from 0 to 100. The default
пие	value is 50.
	Adjusts the sharpness of image edge. The bigger the value is, the
Sharpness	more obvious the image edge, and the noise is also greater.
	The value ranges from 1 to 15. The default value is 1.
Image	Adjusts the image definition. The bigger the value is, the clearer the
Enhancement	image will become, but there will be more noises.
NR	Reduces the noises from image. The bigger the value is, the better
	the image will become.
	In the Config File list, select Day, Night, Normal, or Switch By
	Period. The system configures the parameters correspondingly.
	Day: Apply the configuration during daytime.
Config File	Night: Apply the configuration during nighttime.
	Normal: Apply the configuration during day and night.
	• Switch by Period: If you select this option, you need to configure
	the sunrise time and sunset time where you are located.
Mirror	Enable the function, the left and right side of the video image will be
	switched. It is disabled by default.
	This function specially applies to the image which frame rate is
3D NR	configured as 2 at least. It reduces the noises by making use of the
	information between two frames. The bigger the value is, the better
	the effect.
Flip	In the <b>Flip</b> list, you can select <b>180°</b> to change the video image display.
קיי י	By default, the setting is <b>No Flip</b> .
BLC	In the Light list, select Close or High or Low to use the backlight
	compensation or not.

Parameter	Description					
WB	<ul> <li>Configure the white balance to adjust the general hue of the image.</li> <li>The default setting is <b>Auto</b>.</li> <li>Auto: Automatically apply white balance to different colors to make the image color display normally.</li> </ul>					
	<ul> <li>Sunny: Apply the threshold value to sunny environment.</li> <li>Night: Apply the threshold value to night.</li> <li>Customized: Manually adjust the Red Gain and Blue Gain values.</li> </ul>					
Day & Night	<ul> <li>Configure the color and black&amp;white mode of the image. This setting is not affected by the configuration files. The default setting is Auto.</li> <li>Color: The camera outputs color image only.</li> <li>Auto: Depends on the camera, such as overall brightness and whether there is an IR light, either color image or black&amp;white image is output.</li> <li>B/W: The camera outputs Black and white image only.</li> <li>By Time: The camera outputs image according to the configured sunrise time and sunset time.</li> </ul>					

<u>Step 3</u> Click **Apply** to complete the settings.

# 5.5.2 Configuring Encode Settings

## 5.5.2.1 Encode

#### <u>Step 1</u> Select Main Menu > CAMERA > Encode > Audio/Video.

The  $\ensuremath{\textit{Audio/Video}}$  interface is displayed.

<u>Step 2</u> Configure the settings for the main/sub streams parameters.

Parameter	Description					
Channel	In the <b>Channel</b> list, select the channel that you want to configure the settings for.					
Smart Codec	Enable the smart codec function. This function can reduce the video bit stream for non-important recorded video to maximize the storage space.					
Туре	<ul> <li>Main Stream: In the Type list, select General, Motion, or Alarm.</li> <li>Sub Stream: This setting is not configurable.</li> </ul>					
Compression	<ul> <li>In the Compression list, select the encode mode.</li> <li>H.265: Main profile encoding. This setting is recommended.</li> <li>H.264H: High profile encoding. Low bit stream with high definition.</li> <li>H.264: General profile encoding.</li> <li>H.264B: Baseline profile encoding. This setting requires higher bit stream compared with other settings for the same definition.</li> </ul>					
Bit Rate Type	In the <b>Bit Rate Type</b> list, select resolution for the video. The maximum video resolution might be different dependent on your device model.					
Frame Rate (FPS)	Configure the frames per second for the video. The higher the value, the clearer and smoother the image will become. Frame rate changes along with the resolution. Generally, in PAL format, you can select the value from 1 through 25; in NTSC format, you can select the value from 1 through 30. However, the specific range of frame rate that you can select depends on the capability of the Device.					
Quality	This function is available if you select <b>VBR</b> in the <b>Bit Rate</b> List. The higher the value, the better the image will become.					
I Frame Interval	The interval between two reference frames.					
Bit Rate (Kb/S)	In the <b>Bit Rate</b> list, select a value or enter a customized value to change the image quality. The bigger the value is, the better the image will become.					
Video	Enable the function for sub stream.					
Audio	<ul> <li>Click More, the More interface is displayed.</li> <li>Audio: This function is enabled by default for main stream. You need to manually enable it for sub stream 1. Once this function is enabled, the recorded video file is composite audio and video</li> </ul>					
Audio Source	<ul> <li>stream.</li> <li>Audio Source: In the Audio Source list, you can select LOCAL and HDCVI.</li> </ul>					
Compression	<ul> <li>LOCAL: The audio signal is input from Audio input port.</li> <li>HDCVI: The audio signal is input from HDCVI camera.</li> <li>Audio Format: In the Compression list, select a format that you need.</li> </ul>					

 $\underline{Step \ 3}$  Click  $\pmb{Apply}$  to complete the settings.

#### Click Copy to to copy the settings to other channels.

## 5.5.2.2 Snapshot

#### <u>Step 1</u> Select Main Menu > CAMERA > Encode > Snapshot.

The **Snapshot** interface is displayed.

CAMERA		🍪 🔝 🌣	▣ ♣	LIVE	
Image	Audio/Video Sn	apshot Encode En

<u>Step 2</u> Configure the settings for the snapshot parameters.

Table 5-27

Parameter	Description				
Manual Snapshot	In the Manual Snapshot list, select how many snapshots you want to				
Marida Shapshot	take each time.				
Channel	In the Channel list, select the channel that you want to configure the				
Channel	settings for.				
	In the Type list, you can select Scheduled, Event, or Face Snapshot				
	as the event type for which you want to take a snapshot.				
	• <b>Scheduled</b> : The snapshot is taken during the scheduled period.				
	• Event: The snapshot is taken when there is an alarm event				
Туре	occurs, such as motion detection event, video loss, and local				
	alarms.				
	• Face Snapshot: The snapshot is taken when the face is				
	detected. The face detection function is support only with the				
	Channel 1.				
Size	In the Size list, select a value for the image. The bigger the value is,				

Parameter	Description
	the better the image will become.
Quality	Configures the image quality by 6 levels. The higher the level, the
Quality	better the image will become.
	Configures or customizes the snapshot frequency. You can select 1
Interval	second per one snapshot to 7 seconds per one snapshot. The
	maximum is 3600 seconds per one snapshot.
Stop 2 Click Am	nly to complete the actings

<u>Step 3</u> Click **Apply** to complete the settings.

Click Copy to to copy the settings to other channels.

### 5.5.2.3 Encode Enhancement

### $\square$

- Only some series products support encode enhancement.
- Enabling or disabling this function will take effect after the device is rebooted.

This function is disabled by default. After it is enabled, when main stream resolution is 4K, the frame rate can be 10 fps.

#### <u>Step 1</u> Select Main Menu > CAMERA > Encode > Encode Enhancement.

The Encode Enhancement interface is displayed.

Figure 5-71

	Refresh				Apply	Back

Figure 5-73

 $\underline{Step \ 2}$  Configure the settings for the covered area parameters.

Table 5-29

Parameter	Description
Channel	In the <b>Channel</b> list, select the channel that you want to configure the settings for.
Live	<ul> <li>Preview: Select the Live check box to apply the configured covered block to the selected channel window in the live view screen.</li> <li>Record: Select the Record check box to apply the configured</li> </ul>
Record	<ul> <li>covered block to the selected channel window during recording.</li> <li>To configure covering block, do the following: <ol> <li>Select the Live check box or the Record check box, or select the both. The "1, 2, 3, 4" buttons are activated.</li> <li>Click the buttons to select blocks. A triangle solid black block is displayed.</li> <li>Drag the block to the area that you want to cover and adjust the size of the block. You can configure total 4 covered blocks.</li> </ol> </li> </ul>

<u>Step 3</u> Click **Apply** to complete the settings.

# 5.5.5 Configuring Channel Type

You can configure the channel type as **Analog** or **IP** channel.

#### <u>Step 1</u> Select Main Menu > CAMERA > Channel Type. The Channel Type interface is displayed.

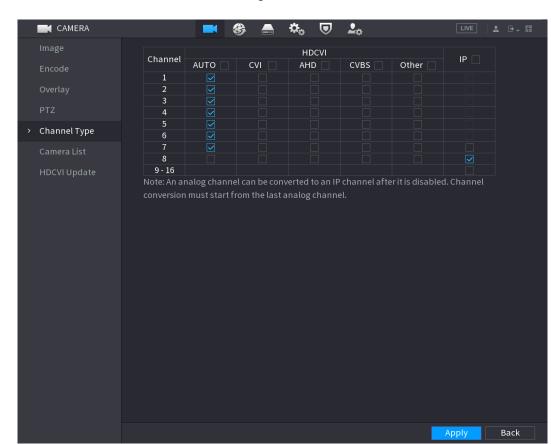

Figure 5-74

<u>Step 2</u> Configure the channels.

Analog Channel: Select the transmission medium such as CVI, AHD, CVBS, and then follow the onscreen instructions to complete the settings.

IP Channel: You can enable the IP channels by disabling the corresponding analog channels. The Device also provides expanded IP channels for your use, such as the channel 8 in Figure 5-74.

 $\square$ 

- The 17–32 channels are only for IP camera and the range changes dependent on the model you purchased.
- The channel selection for analog camera or IP camera are in sequence, for example, if you want to select channels for IP camera, you need to select from the last channel number Channel **16** first, which means, you cannot jump to select the channel **15** directly until you have selected the channel **16**.

<u>Step 3</u> Click **Apply** and follow the onscreen instructions to complete the settings.

# 5.5.6 Upgrading Coaxial Camera

<u>Step 1</u> Select Main Menu > CAMERA > HDVCI Update. The HDVCI Update interface is displayed.

Figure 5-75

	CAMERA		🛞 🔝 🌣	. 🛡 🖌	<b>₽</b>

	Encode					Drowse
	Overlay	Device(0/0)				
	PTZ	Channel	Progress		System Versior	
	Channel Type					
	Camera List					
>	HDCVI Update					
						Update

Step 2 Click Browse.

The Browse interface is displayed.

<u>Step 3</u> Select the upgrade file and then click **OK**.

The HDVCI Update interface is displayed.

Ш

You need to insert the USB storage device that contains the upgrading files.

- <u>Step 4</u> Select the check box of the channel that you want to upgrade.
- Step 5 Click Update.

If the upgrading is successful, the system pops up a message indicating the upgrading is completed.

# **5.6** Configuring Remote Devices

## 5.6.1 Adding Remote Devices

#### $\square$

This function is available after you have configured the channel type as IP channel as described in previous section, see "5.5.5 Configuring Channel Type."

You can add remote devices by IP address.

Select Main Menu > CAMERA > Camera List > Add Camera, the Add Camera interface is displayed.

Figure 5-7
------------

				-				
	CAMERA			📥 🌣	, 🛡	<b>.</b>	LIVE

Table 5-30

Parameter	Description
Uninitialized	Enable the Uninitialized function, the uninitialized devices out of the
Uninitialized	searched devices are displayed in the searched device list.
Initialize	Select the uninitialized device from the uninitialized device list, and
Initialize	the click Initialize to start initializing device.
	In the Filter list, select the remote device type that you want to display
	in the searched device list.
	None: Display all types of devices.
Filter	IPC: Display the front-end devices.
	• DVR: Display all storage devices such as NVR, DVR and HCVR.
	• OTHER: Display the devices that do not belong to IPC or DVR
	type.
Searched Device	Displays the searched devices. You can view the device information
List	such as status, IP address.
	Click Search, the searched devices display in the searched device
	list.
	To adjust the display sequence, in the title line, you can click the IP
Search	address, Type or Device Name text. For example, click the IP address
	text, the sequence icon <sup>IP Address </sup> is displayed.
	"*" is displayed next to the added device.
Add	In the Searched Device List area, select the device that you want to
Auu	add.

Parameter	Description
	Add the device by manually configuring settings such as IP address,
Manual Add	channel selection. For details, see "5.6.1.3 Adding Remote Devices
	Manually."
Added Device	Displays the added devices. You can edit and delete the device, and
List	view the device information.
Delete	Select the check box of the added device, and then click Delete to
Delete	delete the added device.
Import	Select the searched devices and then click Import to import the
Import	devices in batches.
Export	Select the added devices and then click Export. The exported
Export	devices information is saved into the USB storage device.

## 5.6.1.1 Initializing Remote Devices

You can reset the password and IP address of the remote devices through initializing. <u>Step 1</u> Click **Search Device**.

The devices found are displayed in the table.

CAMERA				<b>K</b>	_	<b>☆</b> ₀	◙	<b>.</b>			LIVE	L .	10 10,0

- <u>Step 3</u> Select the uninitialized device that you want to initialize.
- Step 4 Click Initialize.

The Enter Password interface is displayed.

Figure 5-79

Enter Password	
Using current device	e password and email info.
	Next

<u>Step 5</u> Configure the password and email information.

 $\square$ 

If you select the **Using current device password and email info** check box, the remote device automatically uses the current password and email information, so you do not need to set the password and email address again and can go to Step 6.

 Clear the Using current device password and email info check box. The password setting interface is displayed.

Figure 5-80

Enter Passwo	rd	
	Using current de	vice password and email info.
	User	admin
	Password	
		Use a password that has 8 to 32 characters, it can be a
		combination of letter(s), number(s) and symbol(s) with at least
		two kinds of them.(please do not use special symbols like ' " ; :
		&)
	Confirm Password	
		Next

2) Configure the settings for the password setting parameters. Table 5-31

Parameter	Description
User	The default is admin.
PasswordThe password must consist of 8 to 32 non-blank characters and contain at least two types of characters among upper case, lower	
Confirm Password	case, number, and special character (excluding"'", """, ";", ":" and "&"). Enter a strong password according to the password strength bar indication.

3) Click Next.

The **Password Protection** interface is displayed.

Figure 5-81

Password Protection		
Email Address	To reset password, please input properly or update i	in time
Back		Next Skip

 Select the Email Address box and enter the email address that you want to reserve for password reset in the future.

If you do not want to set the reserved email address, click Skip.

#### Step 6 Click Next.

The **NETWORK** interface is displayed.

Figure	5-82
--------	------

NETWORK	
Checked Device No.: 1	
• STATIC	
IP Address	Incremental Value 1
Subnet Mask	
Default Gateway	
1 IP Address	
1	
Back	Next Skip

<u>Step 7</u> Configure the IP address.

Select the **DHCP** check box, you do not need to enter the IP address information, because the system will allocate one IP address to the remote device.

Select the **STATIC** check box, you need to enter the IP address, subnet mast, default gateway, and incremental value. The system will allocate the IP address to the remote devices by progressively increasing the last part of the IP address when initializing devices in batches.

Ш

When configuring IP address for multiple remote devices which were not in the same network segment, these remote devices will belong to the same network segment after configuration.

#### Step 8 Click Next.

The initializing is started. After the process is completed.

Figure 5-83

Dev	/ice l	nitialization

	your actual situation.
	The default value setting is 80. You can enter the value according to
HTTP Port	your actual situation.
	If you enter other value, for example, 70, and then you should enter
	70 after the IP address when logging in the Device by browser.
TCP Port	The default value setting is 37777. You can enter the value according
	to your actual situation.
User Name	Enter the user name of the remote device.

Parameter	Description	
Password	Enter the password of the user for the remote device.	
Remote CH No.	Enter the remote channel number of the remote device that you want to add.	
Decoder Strategy	In the Decoder Strategy list, select Default, Realtime, or Fluent.	
Protocol Type	<ul> <li>If the remote device is added through private protocol, the default type is TCP.</li> <li>If the remote device is added through ONVIF protocol, the system supports Auto, TCP, UDP, or MULTICAST.</li> <li>If the remote device is added through other manufacturers, the system supports TCP and UDP.</li> </ul>	
Encryption	If the remote device is added through ONVIF protocol, enabling th <b>Encryption</b> check box will provide encryption protection to the dat being transmitted.	

<u>Step 3</u> Click **OK** to save the settings.

 $\square$ 

- Only one device can be added manually at one time.
- Indicates successful connection and I indicates connection failed.

## 5.6.1.4 Modifying or Deleting Remote Devices

You can modify and delete the added devices.

• To modify the remote devices:

Step 1 Click or double-click a device.

The **Modify** interface is displayed.

Figure 5-86

Modify				
Channel	D8 -			
Manufacturer	Private -			
IP Address				
TCP Port				
Username	admin			
Password	******	Connect		
Total Channels				
Remote CH No.	D1 •			
Decode Strategy	General -			
			ОК	Cancel

<u>Step 2</u> In the **Channel** list, select the channel that you want to modify settings for. <u>Step 3</u> Click **OK** to save the settings.

- To delete one or more added devices:
  - $\diamond$  Click **to** delete one device.
  - Select the check box of the devices that you want to delete, and then click **Delete**.

### 5.6.1.5 Modifying IP Address

You can modify a single IP address or multiple IP addresses of remote devices at one time.

You can only modify the IP address of initialized cameras.

- To modify a single IP address, do the following:
- Step 1 In the Searched Device list area, click for the device that you want to modify IP.

The **Modify IP** interface is displayed.

Figure 5-87

Modify IP		
Selected Device Quantity: 1		
⊖ DHCP		admin
Subnet Mask		
Default Gateway		
1 SN	IP Address	
OK Cancel		

- <u>Step 2</u> Configure the settings for IP address, subnet mask, default gateway, user name, and password.
- Step 3 Click OK.
- To modify IP address in batches, do the following:
- <u>Step 1</u> In the **Searched Device** list area, select the devices that you want to modify IP address in batches.
- Step 2 Click

The **Modify IP** interface is displayed.

Modify IP			
Selected Device Quantity:			
⊖ DHCP		Username admin	
		Incremental Value 1	
Subnet Mask			
4 SN	IP Address		
OK Cancel			

Step 3 Set incremental value.

 $\square$ 

The system will add the incremental value to the fourth segment of IP addresses of selected devices.

- <u>Step 4</u> Configure the settings for start IP address (the IP address is allocated in sequence), subnet mask, default gateway, user name, and password.
- <u>Step 5</u> Click **OK** to save the settings.

## 5.6.1.6 Exporting IP Address

You can export the added IP address to the USB storage device.

 $\square$ 

The exported information is saved in .csv file, which includes IP address, port number, channel number, manufacturer, user name, and password.

<u>Step 1</u> Insert the USB storage device to the USB port of the Device.

Step 2 Click Export.

The **Browse** interface is displayed.

Browse					
Device Name	sdb1(USB USB)		Refresh Form	nat	
	7.51 GB				
	0.00 KB				
Address					
Name		Size	Туре	Delete	-
🗋 cx				<b> </b>	
FOUND.000				茴	
				<b> </b>	
🗀 System Volume In				亩	
<b>1</b>				亩	
📄 snapPic				茴	-
Backup Encryption					
New Folder				OK I	Back

Figure 5-89

<u>Step 3</u> Configure the save path.

Step 4 Click OK to save the settings.

A pop-up message indicating "Successfully exported" is displayed.

Step 5 Click OK.

 $\square$ 

When exporting IP address, the **Backup Encryption** check box is selected by default. The file information includes IP address, port, channel number, manufacturer, user name, and password.

- If you select the Backup Encryption check box, the file format is .backup.
- If you clear the **Backup Encryption** check box, the file format is .csv. In this case, there might be a risk of data leakage.

## 5.6.1.7 Importing IP Address

You can add remote devices by importing IP address information.

- <u>Step 1</u> Insert the USB storage device to the USB port of the Device.
- Step 2 Click Import.

The **Browse** interface is displayed.

Browse					
Device Name	sdb1(USB USB)	▼ Refr	esh Format		
	7.51 GB				
	0.00 KB				
Address					
Name		Size	Туре	Delete	
		Size	Folder	ā	
FOUND.000			Folder	۵ ش	
				<b>一</b> 一	
System Volume Infor				ā	
				<b> </b>	
📄 snapPic			Folder	亩	
in a later				ā	
				ā	
New Folder				OK Back	

Figure 5-90

- <u>Step 3</u> Select the file that you want to import.
- Step 4 Click OK to start importing.

After importing is completed, a pop-up message indicating "The import succeeded" is displayed.

 $\square$ 

If the IP address that you want to import already exists in the Device, the system will pop up a message to ask you whether to overwrite the existing content.

- Click **OK** to replace the existing one.
- Click Cancel to add it as a separate device in the Added Device area.

- You can edit the exported .csv file and be cautious not to change the file format; otherwise the file cannot be imported as it will be judged as invalid.
- The language of .csv file must match the Device language.
- The import and export through customized protocol is not supported.

## 5.6.2 Managing Remote Devices

You can view the status of remote devices and upgrade.

## 5.6.2.1 Viewing Status

You can view the device information such as connection status, IP address, motion detection, video loss detection, camera name, and manufacturer.

Select Main Menu > CAMERA > Camera List > Status, the Status interface is displayed. Figure 5-91

	CAMERA			6 _	<b>. ≎</b> , !	<b>d</b> 👤	¢		LIVE 🕹 🕒 🗸	
	Image		Sta	us						
		Channe	el Sta	us IP	Address		Motion	Video Loss	Tampering	
			•							
>										
		Refresh								

### 5.6.2.2 Viewing Firmware Information

You can view the device firmware information such as channel number, IP address, manufacturer, system version, video input, audio input, and alarm in.

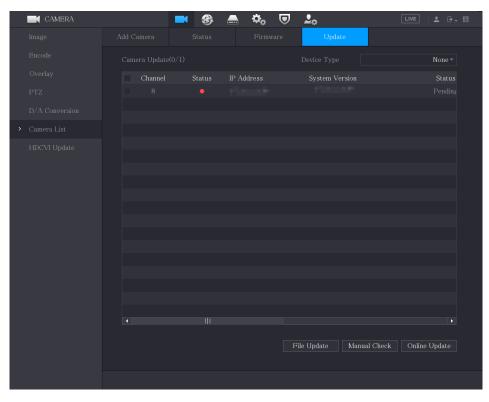

Select Main Menu > CAMERA > Camera List > Firmware, the Firmware interface is displayed.

Figure	5-92
	· · -

>						
		Refresh				

## 5.6.2.3 Upgrading Remote Devices

#### <u>Step 1</u> Select Main Menu > CAMERA > Camera List > Update. The Update interface is displayed.

<u>Step 2</u> Upgrade the device.

- File Update
- 1) Insert a USB storage device containing the upgrade files into the USB port of the Device.
- 2) Select the devices that you want to upgrade.
- Click File Update.
   The File Update interface is displayed.
- 4) Select the upgrading files and click **Apply**.
- Online Update
- 1) Click **Detect** or select the check box the device that you want to upgrade and click **Manual Check**.

The system starts detecting if there is a new version on the online server.

- 2) Select the check box of all the devices that have new version.
- 3) Click **Online Update**.

 $\square$ 

- The system will pop up a message to indicate if the upgrading is successful.
- You can use the Type list to filter the devices so that you can find the devices quickly.

# 5.7 Configuring Record Settings

You can record video manually or automatically and configure the recording settings to main stream and sub stream respectively.

## 5.7.1 Enabling Record Control

- Manual recording operation requires the user have the permission to access STORAGE settings.
- Check to ensure the HDD installed in the Device has been formatted properly.

To enter the record control interface, do the following:

<u>Step 1</u> Right-click on the live view screen, the shortcut menu is displayed. On the shortcut menu, select **Manual Control > Record Control**.

The **Record Mode** interface is displayed.

Figure 5-94

ord Mode						
Main Stream	All					
			•			
Manual						
Off						
Sub Stream						
Manual						
Off			•			
On						
Off			•			
					Apply	E

Step 2 Configure the settings for the record control parameters.

Table 5-33

Parameter	Description				
Channel	Displays all the analog channels and the connected digital channels.				
Channel	You can select a single channel or select All.				
<ul> <li>Auto: Automatically record according to the record type a recording time as configured in the recording schedule.</li> <li>Manual: Keep general recording for 24 hours for the select channel.</li> <li>Stop: Do not record.</li> </ul>					
Snapshot	Enable or disable the scheduled snapshot for the corresponding channels.				

Step 3 Click Apply.

## 5.7.2 Configuring Recorded Video Storage Schedule

You need to configure the storage schedule for the recorded video so that the recorded video can be saved. For details, see "5.1.4.9 Configuring Recorded Video Storage Schedule."

# 5.8 Configuring Snapshot Settings

## 5.8.1 Configuring Snapshot Trigger

The snapshot is divided into scheduled snapshot, event triggered snapshot, and face detection triggered snapshot. When the both are enabled, the event triggered snapshot has the priority.

• If there is no alarm event, the system performs scheduled snapshot.

• If there is any alarm event, the system performs event triggered snapshot.

## 5.8.1.1 Configuring Scheduled Snapshot

- <u>Step 1</u> Right-click on the live view screen, the shortcut menu is displayed.
- <u>Step 2</u> On the shortcut menu, select **Manual Control > Record Control**. The **Record Mode** interface is displayed.
- <u>Step 3</u> In the **Snapshot** area, enable the snapshot for the channels if needed.

Main Stream       All       1       2       3       4       5       6       7       8         Auto       Image: Constraint of the stream       Image: Constream       Image: Constraint of th

<u>Step 2</u> Enable the FTP function and configure the parameters. For details, see "5.18.9 Configuring FTP Storage Settings." The snapshots will be uploaded to FTP for backup.

# 5.9 Playing Back Video

## 5.9.1 Enabling Record Control

- Manual recording operation requires the user have the permission to access STORAGE settings.
- Check to ensure the HDD installed in the Device has been formatted properly.

To enter the record control interface, do the following:

<u>Step 1</u> Right-click on the live view screen. The shortcut menu is displayed. On the shortcut menu, select **Manual Control > Record Mode**. The **Record Mode** interface is displayed.

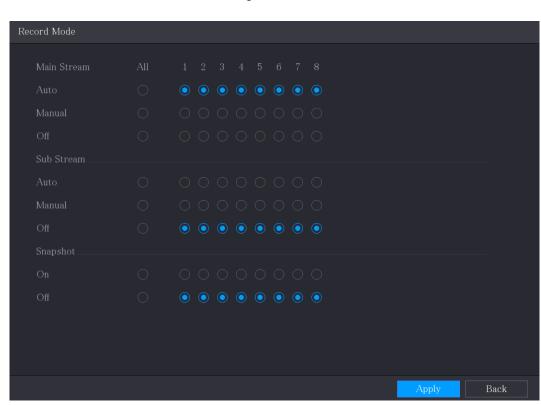

Figure 5-102

<u>Step 2</u> Configure the settings for the record control parameters.

Table 5-34

Parameter	Description				
Channel	Displays all the analog channels and the connected digital channels.				
Channel	You can select a single channel or select All.				
Main Stream/Sub Stream	<ul> <li>Auto: Automatically record according to the record type and recording time as configured in the recording schedule.</li> <li>Manual: Keep general recording for 24 hours for the selected channel.</li> <li>Stop: Do not record.</li> </ul>				
Snapshot Enable or disable the scheduled snapshot for the corre channels.					

## 5.9.2 Instant Playback

You can use the instant playback function to play back the previous five minutes to sixty minutes of the recorded video in any channel. For details about instant playback function, see "5.2.2.1 Instant Playback."

## 5.9.3 Main Interface of Video Playback

You can search for and play back the recorded video saved on the Device.

Select Main Menu > Search, the video search interface is displayed.

From R/W Disk 6 Record 7 1. Camera Name АЗ САМ З 8 9 2 -10 3  $\frac{11}{12}$ 4 . General ₩Alarm ✓Motion ✓Intel POS 13 5

Figure 5-103

Table 5-35

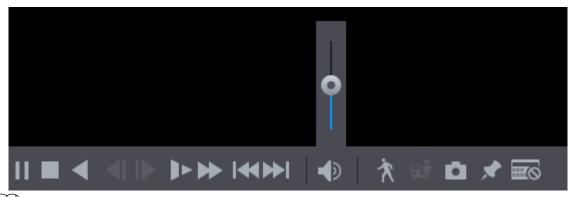

No.	Function	Description
1	Display Window	Display the searched recorded video or picture. Supports simultaneously playing in single-channel, 4-channel, 9-channel, and 16-channel. When playing back in a single channel, click and hold to select the area that you want to enlarge. The area is enlarged after the left mouse button is released. To exit the enlarged status, right-click on the image.

## 5.9.3.2 Selecting Search Type

You can search the recorded videos, splice, or snapshots from HDD or external storage device.

• From R/W Disk: Recorded videos or snapshots playback from HDD of the Device.

Figure 5-105

• From I/O Device: Recorded videos playback from external storage device. Click **Browse**, select the save path of recorded video file that you want to play.

Double-click the video file or click **b** to start playing.

## 5.9.3.3 Clipping Recorded Video

During playback, clip sections of recorded video and save to the USB storage device. For the video clip interface.

Figure 5-107

<u>Step 1</u> Select a recorded video that you want to play.

Click click

Double-click anywhere in the time bar colored area to start playback.

- <u>Step 2</u> Click on the time bar to select the start time, and then click K to start clipping.
- <u>Step 3</u> Click on the time bar to select the end time, and then click *stop* clipping.

Step 4 Click

The **BACKUP** dialog box is displayed. You can back up the files.

- Ш
- You can clip the video of a single-channel or multiple channels.
- Maximum 1024 files can be backed up at one time.
- The files that are selected in the File List cannot be clipped.

### 5.9.3.4 Backing up Recorded Video

You can back up the recorded video file or splice video file into the USB storage device.

<u>Step 1</u> Select the recorded video file that you want to back up. You can select the following two types of files:

Recorded video file: Click III, the File List area is displayed. Select the file(s) that

you want to back up.

Splice video file. For details about splicing video file, see "5.9.3.3 Clipping Recorded Video."

The **BACKUP** dialog box is displayed.

	1	Name(Type	e)		Free Space/Total S	pace	Device Status

If you do not want to back the file, clear the check box.

## 5.9.4 Smart Search

During playback, you can analyze a certain area to find if there was any motion detection event occurred. The system will display the images with motion events of the recorded video.

Ш

Not all models support this function.

To use the Smart Search function, you need to enable the motion detection for the channel by selecting **Main Menu > ALARM > Video Detection > Motion Detection**.

To use the Smart Search function, do the following:

- <u>Step 1</u> Select **Main Menu > SEARCH**, the video search interface is displayed.
- <u>Step 2</u> In the **Camera Name** list, select the channel(s) that you want to play.

Step 3 Click or double-click anywhere in the time bar colored area to start playback.

Step 4 Click

The grid is displayed on the screen.

Ш

- Only single-channel supports smart search.
- If multi-channels are selected, double-click on the channel window to display this channel only on the screen, and then you can start using smart search function.

<u>Step 5</u> Drag the pointer to select the searching area.

 $\square$ 

The grid area supports 22×18(PAL) and 22×15(NTSC).

The screen starts playing back the motional splices of recorded video for the selected searching area.

Step 7 Click to exit the playback.

## 5.9.5 Marking and Playing Back Video

You can mark the recording for somewhere important. Then you can easily find the marked recording by searching time and mark name.

## Marking a Video

Step 1 Select Main Menu > SEARCH, the video search interface is displayed.

Step 2 In the playback mode, click

The Add Tag dialog box is displayed.

Figure 5-109

Add Tag		
Tag Time		
Tag Name		
Default	OK Back	

Step 3 In the Tag Name box, enter a name.

Step 4 Click OK.

This marked video file displays in the Tag List.

## Playing Back Marked Video

 $\square$ 

This function is supported on single-channel playback. Step 1 In the Camera Name list, select one channel.

Step 2 Click

The Tag List interface is displayed.

Figure 5-110

00 : 00 : 00	٩
1	
Tag Time Name	
<b>1</b> 1:29:14 uuuu	
11:43:55 errt	
Tag Name	
Interval Before Tag	
0	sec.
*	5

Step 3 Double-click the file that you want to play back.

To search the marked video by time, in the search box on the top-right of the interface,

enter the time, and then click

## Playing Back Time before the Tag

You can configure to play N seconds of the tagged video before the tagged time.

Step 1 In the Tag Name box, enter the name of a tagged video.

Step 2 In the Interval Before Tag box, enter N seconds.

Step 3 Click

The playback starts from N seconds before the tagged time.

If there is N seconds exist before the marked time, the playback starts from N seconds before the tagged time. If there is not, it plays back as much as there is.

## Managing Tagged Video

In the Tag List interface, click , the Tag Management interface is displayed.

Figure 5-111

Γ	Гag Mana	agement	t –			
Channel			8			
	Start Time		2020-01-04	00:00:00		
	End Tim		2020-01-05	00:00:00		Search
	2	СН	Tag Time		Tag Name	
			2020-01-04	11:29:14		
			2020-01-04	11:43:55	errt	
	Dele	te				Cancel

- Be default, it manages all the tagged videos of the selected channel.
- To search the tagged video, select channel number from the **Channel** list, enter time in **Start Time** box and **End Time** box, and then click **Search**.
- All the tagged videos display in time order.
- To modify the name of tagged video, double-click a tagged video, the **Modify Tag** dialog box is displayed.
- To delete the marked video, select the tagged video, and then click **Delete**.

 $\square$ 

After opening the **Tag Management** interface, the playback will pause until exiting this interface. If the marked video that was in playing back is deleted, the playback will start from the first tagged video in the **Tag List**.

## 5.9.6 Playing Back Snapshots

You can search and play back the snapshots.

- <u>Step 1</u> Select Main Menu > SEARCH, the video search interface is displayed.
- <u>Step 2</u> In the **Search Type** list, select **Picture**.
- <u>Step 3</u> In the **Channel** list, select a channel number.
- <u>Step 4</u> In the **Calendar** area, select a date.
- Step 5 Click

The system starts playing snapshots according to the configured intervals.

## 5.9.7 Playing Back Splices

You can clip the recorded video files into splices and then play back at the same time to save your time.

 $\square$ 

Not all models support this function.

<u>Step 1</u> Select Main Menu > SEARCH, the video search interface is displayed.

<u>Step 2</u> In the Search Type list, select Subperiod; In the Split Mode list, select 4, 9, or 16.

Figure 5-112

<u>Step 3</u> In the **Calendar** area, select a date.

<u>Step 4</u> In the Camera Name list, select a channel.

Ш

Only single-channel supports this function.

Step 5 Start playing back splices.

Click , the playback starts from the beginning.

Double-click anywhere on the time bar, the playback starts from where you click. Figure 5-113

 $\square$ 

Every recorded video file must be at least five minutes. If a recorded video file is less than 20 minutes but still choose to split into four windows, the system will automatically adjust the windows quantity to ensure every splice is more than five minutes, and in this case it is possible that there are no images are displaying in some windows.

## 5.9.8 Using the File List

You can view all the recorded videos within a certain period from any channel in the **File List**. <u>Step 1</u> Select **Main Menu > SEARCH**, the video search interface is displayed.

Step 2 Select a channel(s).

Step 3 Click

The File List interface is displayed.

Figure 5-114

Step 4 Start playback.

Click , the playback starts from the first file by default.

Click any file, the system plays back this file.

 $\square$ 

- In the time box on the top of the file list interface, you can enter the specific time to search the file that you want to view.
- In the File List area, there are 128 files can be displayed.
- File type: R indicates general recorded video; A indicates recorded video with external alarms; M indicates recorded video with motion detection events; I indicates recorded video with intelligent vents.
- Click to return to the interface with calendar and CAM NAME list.

Locking and Unlocking the Recorded Video

• To lock the recorded video, on the File List interface, select the check box of the recorded

video, and then click . The locked video will not be covered.

• To view the locked information, click *file Lock* interface is displayed.

The recorded video that is under writing or overwriting cannot be locked.

• To unlock the recorded video, in the **File Lock** interface, select the video, and then click **Unlock**.

#### Figure 5-115

3) Configure the parameters.

Figure 5-128

Parameter	Description		
Name	Enter a name for the region.		
Sensitivity	Every region of every channel has an individual sensitivity value.		
	The bigger the value is, the easier the alarms can be activated.		
Threshold	Adjust the threshold for motion detect. Every region of every channel		
	has an individual threshold.		

When anyone of the four regions activates motion detect alarm, the channel where this region belongs to will activate motion detect alarm.

<u>Step 4</u> Right-click on the screen to exit the region setting interface.

Step 5 On the Motion Detection interface, click Apply to complete the settings.

#### **Setting Motion Detection Period**

 $\square$ 

The system only activates the alarm in the defined period.

Step 1 Next to Schedule, click Setting.

The Setting interface is displayed.

Figure 5-129

 $\underline{Step 2} \quad \text{Define the motion detection period. By default, it is active all the time.}$ 

#### Define the period by drawing.

- Define for a specified day of a week: On the timeline, click the half-hour blocks to select the active period.
- ♦ Define for several days of a week: Click 🛄 before each day, the icon

switches to . On the timeline of any selected day, click the half-hour blocks

to select the active periods, all the days with evil take the same settings.

♦ Define for all days of a week: Click All, all 🛄 switches to 🔤. On the

timeline of any day, click the half-hour blocks to select the active periods, all the days will take the same settings.

Define the period by editing. Take Sunday as an example.

1) Click

The **Period** interface is displayed.

Figure 5-130

Period					
	00 : 00	- 11: 30			
	12 : 00	- 24 : 00			
	00 : 00	- 24 : 00			
	00 : 00	- 24 : 00			
	00 : 00	- 24 : 00			
	00 : 00	- 24 : 00			
				OK	Back

- 2) Enter the time frame for the period, and then select the check box to enable the settings.
  - $\diamond$  There are six periods for you to set for each day.
  - ♦ Under Copy to, select All to apply the settings to all the days of a week, or select specific day(s) that you want to apply the settings to.
- 3) Click **OK** to save the settings.

Step 3 On the Motion Detection interface, click Apply to complete the settings.

### 5.10.4.2 Configuring Video Loss Settings

When the video loss occurs, the system activates the alarm.

<u>Step 1</u> Select Main Menu > ALARM > Video Detection > Video Loss.

The Video Loss interface is displayed.

	🔔 ALARM	🛛 🛇 💄	ه 🔍	S 7	- ¢	<b>.</b>		LIVE	L 0.

Step 3 Select alarm linkage actions to disarm.

All alarm linkage actions will be disarmed when you select All.

Step 4 Click Apply.

# 5.11 Smart Detection

Smart detection includes SMD, human face and IVS.

The system processes and analyzes video images, abstracts key information from the video, and activates alarms when it detects that person, vehicle, face or behavior matches the detection rule.

 $\square$ 

- Not all models support this function.
- Only the analog channel 1 supports this function. The IP channel does not support this function.
- SMD, face detection function, and IVS function cannot be enabled at the same time.

# 5.11.1 SMD

The system processes and analyzes video images, effectively detects persons and vehicles in the video, and activates alarms. Meanwhile, the system carries out structured storage of the detection result, to search it quickly in the future.

# 5.11.1.1 Configuring SMD Settings

The **SMD** interface is displayed.

Set SMD parameters. When the Device detects information, the system activates alarms.

 MART DETECTION
 Image: Section of the section of th

Figure 5-138

Step 2 Select the channel and enable.

Step 3 Set parameters.

Table 5-45

Parameter	Description					
Channel	In the <b>Channel</b> list, select a channel to set the motion detection.					
Enable	Enable or disable SMD function.					
Sensitivity	ensitivity Set sensitivity, including high, middle, and low. The higher sensitivity is, the bigger alarm probability will be, the bigger fa alarm rate will be. The system selects middle by default.					
Effective Target	Select alarm object, including person and vehicle.					
Schedule	Define a period during which the motion detection is active.					
Anti-Dither	Configure the time period from end of event detection to the stop of alarm.					
Alarm-out Port	<ul> <li>Click Setting to display setting interface.</li> <li>General Alarm: Enable alarm activation through the alarm devices connected to the selected output port.</li> <li>External Alarm: Enable alarm activation through the connected alarm box.</li> <li>Wireless Siren: Enable alarm activation through devices</li> </ul>

# 5.11.2 Configuring Face Detection

You can configure the face detection settings and search the detected faces in the defined time period.

 $\square$ 

- Not all models support this function.
- Only the analog channel 1 supports this function. The IP channel does not support this • function.
- SMD, face detection function, and IVS function cannot be enabled at the same time.

# 5.11.2.1 Configuring Face Detection Settings

When the Device detects the human faces, the system activates alarms.

Step 1 Select Main Menu > SMART DETECTION > Parameter > Face.

The Face interface is displayed.

SMART DETECTION  $\bigcirc$  $\otimes$ Ē. 1  $\mathcal{O}$  $\bigcirc$ View Setting Step 2 Configure the settings for the face detection parameters.

Figure 5-141

Parameter	Description
	In the Channel list, select the channel that you want to configure
Channel	the face detection settings.
	Only the analog channel 1 supports this function.
Enable	Enable or disable the face detection function.
	Click <b>View Setting</b> to draw areas to filter the target.
Rule	You can configure two filtering targets (maximum size and
	minimum size). When the target is smaller than the minimum size
	or larger than the maximum size, no alarms will be activated. The
	maximum size should be larger than the minimum size.
	Define a period during which the detection is active.
Schedule	For details, see "Setting Motion Detection Period" section in
	"5.10.4.1 Configuring Motion Detection Settings."
	Click <b>Setting</b> to display setting interface.
	Enable alarm activation function. Select the alarm output port(s) to
Alarm-out Port	which the peripheral alarm devices are connected. When an alarm
	event occurs, the system links the peripheral alarm devices
	connected to the selected output port.
Post-Alarm	Set a length of time for the Device to delay turning off alarm after
POSI-Aldini	the external alarm is cancelled. The value ranges from 0 seconds to 300 seconds. If you enter 0, there will be no delay.
	Select the <b>Show Message</b> check box to enable a pop-up message
Show Message	in your local host PC.
	Select the <b>Report Alarm</b> check box to enable the system to upload
Report Alarm	the alarm signal to the network (including alarm center) when an
	alarm event occurs.
	Select the Send Email check box to enable the system to send an
	email notification when an alarm event occurs.
Send Email	
	To use this function, make sure the email function is enabled in
	Main Menu > NETWORK > Email.
	Select the channel(s) that you want to record. The selected
	channel(s) starts recording after an alarm event occurs.
Record Channel	
	The recording for intelligence event and auto recording function
	must be enabled. For details, see "5.1.4.9 Configuring Recorded
	Video Storage Schedule" and "5.9.1 Enabling Record Control."
	Click <b>Setting</b> to display the PTZ interface.
	Enable PTZ linkage actions, such as selecting the preset that you
PTZ Linkage	want to be called when an alarm event occurs.
	Face Detect can only link PTZ preset.

Parameter	Description
	Set a length of time for the Device to delay turning off recording
Post Record	after the alarm is cancelled. The value ranges from 10 seconds to
	300 seconds.
Tour	Select the Tour check box to enable a tour of the selected
	channels.
	Select the <b>Picture Storage</b> check box to take a snapshot of the
	selected channel.
	To use this function, make sure the following settings are
Picture Storage	configured:
	• The snapshot function is enabled for motion detect alarms in
	Main Menu > STORAGE > Schedule > Snapshot.
	• Select Main Menu > CAMERA > Encode > Snapshot, in the
	Type list, select Human Face.
	Select the check box to enable the function. When an alarm event
	occurs, the extra screen outputs the settings configured in Main
Sub Screen	Menu > DISPLAY > Tour > Sub Screen.
	<ul> <li>Not all models support this function.</li> </ul>
	<ul> <li>To use this function, extra screen shall be enabled.</li> </ul>
Buzzer	Select the check box to activate a buzzer noise at the Device.
	Select the check box to enable the Device to record a local alarm
Log	log.
Alarm Tone	Select to enable audio broadcast in response to a human face
Alarm Tone	detection event.
M/bite Light	Select the check box to activate a white light camera to trigger
White Light	white light alarm.
Oiner	Select the check box to activate an audio camera to trigger audio
Siren	alert.

<u>Step 3</u> Click **Apply** to complete the settings.

# 5.11.2.2 Searching for Detected Faces

# 

To comply with relevant regulations, the faces have received fuzzy processing.

<u>Step 1</u> Select Main Menu > SMART DETECTION > AI Search > Face.

The **Face** interface is displayed.

Figure 5-151

<u>Step 4</u> Configure the triggering parameters.

Table 5-48

Parameter	Description
	Click Setting to display set interface.
Schedule	Define a period during which the alarm linkage is active. For
Schedule	details, see "Setting Motion Detection Period" section in "5.10.4.1
	Configuring Motion Detection Settings."

Parameter	Description					
Alarm-out Port	<ul> <li>Click Setting to display setting interface.</li> <li>Local Alarm: Enable alarm activation through the alarm devices connected to the selected output port.</li> <li>Extension Alarm: Enable alarm activation through the connected alarm box.</li> <li>Wireless Siren: Enable alarm activation through devices connected by USB gateway or camera gateway.</li> </ul>					
Post-Alarm	Set a length of time for the Device to delay turning off alarm after the external alarm is cancelled. The value ranges from 0 seconds to 300 seconds, and the default value is 10 seconds.					
Show Message	Select the <b>Show Message</b> check box to enable a pop-up message in your local host PC.					
Report Alarm	Select the <b>Report Alarm</b> check box to enable the system to upload the alarm signal to the network (including alarm center) when an alarm event occurs.					
Send Email	Select the <b>Send Email</b> check box to enable the system to send an email notification when an alarm event occurs. To use this function, make sure the email function is enabled in <b>Main Menu &gt; NETWORK &gt; Email</b> .					
Record Channel	Select the channel(s) that you want to record. The selected channel(s) starts recording after an alarm event occurs.					
PTZ Linkage	Click <b>Setting</b> to display the PTZ interface. Enable PTZ linkage actions, such as selecting the preset that you want to be called when an alarm event occurs.					
Post Record	Set a length of time for the Device to delay turning off recording after the alarm is cancelled. The value ranges from 10 seconds to 300 seconds.					
Tour	Select the <b>Tour</b> check box and the channels to enable a tour of the selected channels when an alarm event occurs.					
Snapshot	Select the <b>Snapshot</b> check box to take a snapshot of the selected channel when an alarm event occurs.					
Sub Screen	<ul> <li>Select the check box to enable the function. When an alarm event occurs, the extra screen outputs the settings configured in Main Menu &gt; DISPLAY &gt; Tour &gt; Extra Screen.</li> <li>Not all models support this function.</li> <li>To use this function, extra screen shall be enabled.</li> </ul>					

Description						
Select the check box to enable the function. When an alarm event						
occurs, the video output port outputs the settings configured in						
"Main Menu > Display > Tour."						
Not all models support this function.						
Select the check box to activate a buzzer noise at the Device when						
an alarm event occurs.						
Select the check box to enable the Device to record a local alarm						
log when an alarm event occurs.						
Select the check box to enable audio broadcast in response to an						
alarm event.						
Select the check box to activate a white light camera to trigger						
white light alarm.						
Select the check box to activate an audio camera to trigger audio						
alert						

<u>Step 5</u> Click **OK** to save the settings.

The IVS interface is displayed.

<u>Step 6</u> Select the **Enable** check box, and then click **Apply**.

The tripwire detecting function is active. When the target object crosses the tripwire in the defined direction, the system activates alarms.

### 5.11.3.1.3 Configuring Intrusion Rules

When the target enters and leaves the defined detection area, or the target appears in the defined area, the system activates alarms.

- You can define the shape and quantity of intrusion areas.
- Supports detecting the behaviors that enter and leave the intrusion areas.
- Supports detecting the behaviors that are moving in the intrusion areas. The quantity of areas and lasting time can be configured.
- Supports size filtering for target.

<u>Step 1</u> On the rule line that you added, in the **Type** list, select **Intrusion**.

SMART DETECTIO	on 🚫		<u>,</u>	S) (	$\sim$		<b>A</b>	LIVE	🕒 🗸 🕅

	Default	Refre	sh					Apply	Back

Figure 5-152

Step 2 Draw an area.

- 1) In the **Channel** list, select the channel that you want to configure the rules for.
- 2) Click

The monitoring screen to configure the intrusion rules is displayed. See Figure 5-153 for analog camera and the IP camera without preset, and see Figure 5-154 for IP camera with preset.

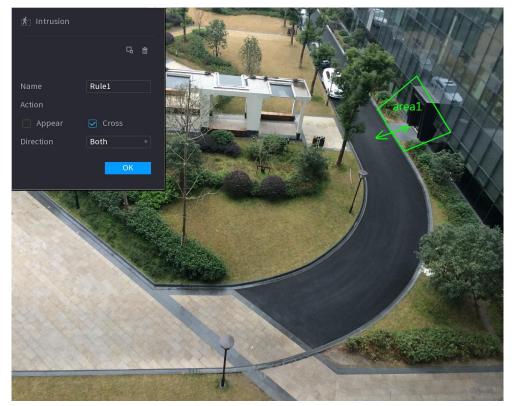

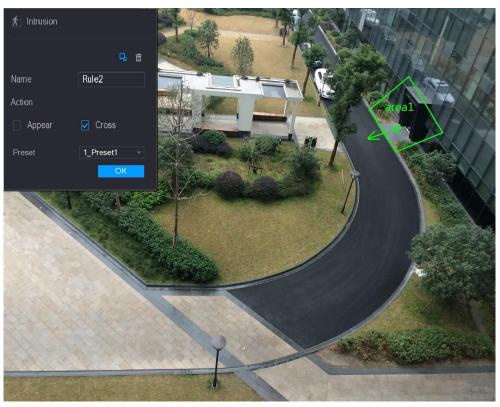

Figure 5-154

3) Configure the settings for the parameters of drawing rules.

Table 5-49

Parameter	Description
Name	Enter the customized rule name.
Action	Configure the actions that are defined as intrusion. You can select

Parameter	Description									
	the Appear check box and the Cross check box.									
Direction	In the <b>Direction</b> list, select the direction of crossing the configured									
Direction	area. You can select Both, Enter, and Exit.									
Target Filter	Click to draw areas to filter the target. You can configure two filtering targets (maximum size and minimum size). When the target that is crossing the tripwire is smaller than the minimum size or larger than the maximum size, no alarms will be activated. The maximum size should be larger than the minimum size.									
Preset	In the <b>Preset</b> list, select the preset that you want to configure the rule for.									

- 4) Drag to draw an area.
- 5) Click **OK** to save the settings.
- Step 3 Click to set the actions to be triggered. For details, see "5.11.3.1.2 Configuring Tripwire Rules."
- <u>Step 4</u> Select the **Enable** check box, and then click **Apply**.

The intrusion detecting function is active. When the target enters and leaves the area, or the target appears in the defined area, the system activates alarms.

#### 5.11.3.1.4 Configuring Abandoned Rules

When the object is placed in the defined detection area for more than the set time, the system activates alarms.

- You can define the shape and quantity of detecting areas.
- Period value can be configured.
- Supports size filtering for target.

Step 1 On the rule line that you added, in the Type list, select Abandoned Object.

Figure 5-158

Step 2 Draw an area.

- 1) In the **Channel** list, select the channel that you want to configure the rules for.
- 2) Click

The monitoring screen to configure the missing rules is displayed. See Figure 5-159 for analog camera and the IP camera without preset, and see Figure 5-160 for IP camera with preset.

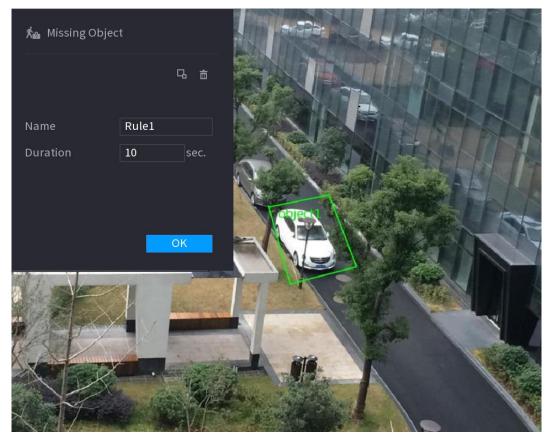

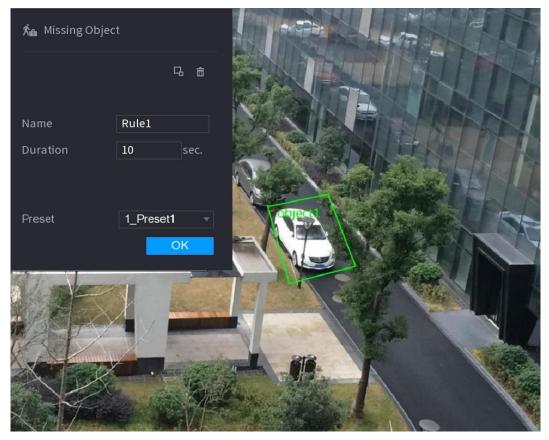

Figure 5-160

3) Configure the settings for the parameters of drawing rules.

Table 5-51

Parameter	Description
Name	Enter the customized rule name.
Duration	Configure the minimum time period for activating alarms by
Duration	detecting the missing objects.
Target Filter	Click to draw areas to filter the target. You can configure two filtering targets (maximum size and minimum size). When the target that is crossing the tripwire is smaller than the minimum size or larger than the maximum size, no alarms will be activated. The maximum size should be larger than the minimum size.
Preset	In the <b>Preset</b> list, select the preset that you want to configure the
110000	rule for.
4) Dra	ag to draw an area

- 4) Drag to draw an area.
- 5) Click **OK** to save the settings.
- Step 3 Click to set the actions to be triggered. For details, see "5.11.3.1.2 Configuring Tripwire Rules."
- <u>Step 4</u> Select the **Enable** check box, and then click **Apply**.

The missing object detecting function is active. When the target is taken away from the defined area exceeds the set time, the system activates alarms.

# 5.11.3.2 Enabling the Intelligent Settings for IP Camera

 $\square$ 

- Not all IP cameras support this function.
- The interface might be different depending on the connected IP camera.

After configuring the intelligent settings for IP cameras (refer to 5.11.3.1 "Configuring Intelligent Settings"), you still need to enable to apply the configurations. For example, you have configured the intelligent settings for IP camera as displayed in Figure 5-161, and then click **Apply** to save the settings.

	🧕 SMART DETECTIO	on 🤇	& 💄	<u>, (</u>	= 🕥 í	ጉ 🕻	) 📮	$\bigcirc$	LIVE	L 🕞 - 📖

		Refresh					Apply	Back

For the IP camera without preset, see Figure 5-163.

<u>Step 3</u> Enable the IVS function.

For the IP camera with preset, do the following:

1) In the **Preset** list, select **1\_Preset1**.

 $\square$ 

All the presets that the IP camera has are displayed in the **Preset** list, and you just need to select the preset that you have configured the intelligent settings as shown in 0.

2) Click Add.

The selected preset is displayed in the table and the IVS button and Face Detect button are displayed.

SMD		Face	IVS			
Channel	6		✓ Preset	1_Preset1	Add	
0	Preset			Delete		
1						
	putton					
Refr	resh				Apply	Back

Figure 5-164

- 3) Select the line of **1\_Preset1**.
- 4) Click **IVS button** to enable the intelligent settings to preset 1. The buttons is displayed in blue.
- 5) Click **Apply** to complete the settings.

For the IP camera without preset, click the IVS button and then click **Apply** to complete the settings.

# 5.11.3.3 Using Smart Search

You can search for the intelligent events and display in graph or list.

```
Step 1 Select Main Menu > SMART DETECTION > AI Search.
```

The **AI Search** interface is displayed.

🧕 SMART DETECTIO	on 🔇 💄	<u>,</u>	S 7	Ø 📮

<u>Step 3</u> Configure the settings for alarm linkage.

Figure 5-184

Table 5-53

Parameter	Description
Access Point	Indicates the channel that the camera is connected to.
Туре	Temperature by default.
Detect Position Name	Set the detect position name.
Preview Channel	Select the channel that you want to preview to help monitor the channel of access point. This channel could be the channel of access point or any other channels according to your actual situation.
Event Type	Select event type as <b>High</b> or <b>Low</b> , and set the upper and low temperature limit respectively. For example, select event type as
Upper Limit	<b>High</b> and set upper limit as <b>28</b> , the alarm occurs when the temperature reaches $28^{\circ}$ C.
Enable	Enable the alarm function.
Schedule	Define a period during which the alarm setting is active. For more information about setting the period, see "5.10.4.1 Configuring Motion Detection Settings."
Alarm-out Port	<ul> <li>Click Setting to display setting interface.</li> <li>General Alarm: Enable alarm activation through the alarm devices connected to the selected output port.</li> <li>External Alarm: Enable alarm activation through the connected alarm box.</li> <li>Wireless Siren: Enable alarm activation through devices connected by USB gateway or camera gateway.</li> </ul>
PTZ Linkage	Click <b>Setting</b> to display the PTZ interface. Enable PTZ linkage actions, such as selecting the preset that you want to be called when an alarm event occurs.
Post-Alarm	Set a length of time for the Device to delay turning off alarm after the external alarm is cancelled. The value ranges from 0 seconds to 300 seconds, and the default value is 10 seconds. If you enter 0, there will be no delay.
Post Record	Set a length of time for the Device to delay turning off recording after the alarm is cancelled. The value ranges from 10 seconds to 300 seconds, and the default value is 10 seconds.
Anti-Dither	Configure the time period from end of event detection to the stop of alarm.
Snapshot	Select the check box to take a snapshot of the selected channel.

Record Channel	Alect the channel(s) that you want to record. The selected annel(s) starts recording after an alarm occurs. The recording for IoT alarms and auto recording function must be habled. For details, see "5.1.4.9 Configuring Recorded Video torage Schedule" and "5.9.1 Enabling Record Control." Elect the check box to enable a tour of the selected channels. Use this function, make sure the tour is enabled and configured Main Menu > DISPLAY > Tour. Elect to enable audio broadcast/alarm tones in response to a mperature alarm event. Show Message: Select the Show Message check box to enable a pop-up message in your local host PC. Buzzer: Select the check box to activate a buzzer noise at the Device. Video Matrix: Select the check box to enable the function.
Tour To Alarm Tone Set ten • • •	use this function, make sure the tour is enabled and configured Main Menu > DISPLAY > Tour. elect to enable audio broadcast/alarm tones in response to a mperature alarm event. <u>Step 2</u> Configure the settings for the POS parameters. Table 5-57

Parameter	Description					
	In the POS Name list, select the POS machine that you want to					
POS Name	configures settings for. Click to modify the POS name.					
	The POS name supports 21 Chinese characters or 63 English					
	characters.					
Enable	Enable the POS function.					
	Select the channel(s) that you want to record. The selected					
Record Channel	channel(s) starts recording after an alarm occurs.					
Record Charmer	The recording for POS alarms and auto recording function must					
	be enabled. For details, see "5.1.4.9 Configuring Recorded Video					
	Storage Schedule" and "5.9.1 Enabling Record Control."					
Privacy	Enter the privacy content.					
Protocol	Select <b>POS</b> by default. Different machine corresponds to different					
	protocol.					

Parameter	Description			
	In the <b>Connect Type</b> list, select the connection protocol type.			
Connecttion Mode	Click , the IP Address interface is displayed.			
	In the Source IP box, enter the IP address (the machine that is			
	connected to the Device) that sends messages.			
Character Encode	Select a character encoding mode.			
	In the Overlay Mode list, Select Page or ROLL.			
	• Page means to turn a page when there are 16 lines of			
	overlay information.			
Overlay Mode	• <b>ROLL</b> means to roll up the interface when there are 16 lines			
	of overlay information. The first line disappears each time.			
	When local preview mode is 4-split, overlay information is			
	substituted when there are 8 lines.			
	When the network is not working correctly and cannot be			
Network Timeout	recovered after the entered timeout limit, the POS information will			
	not display normally. After the network is recovered, the latest			
	POS information will be displayed.			
	Enter the time that how long you want to keep the POS			
Overlay Time	information displaying. For example, enter 5, the POS information			
	disappear from the screen after 5 seconds.			
Font Size	In the Font Size list, select <b>Small</b> , <b>Medium</b> , or <b>Large</b> as the text size of POS information			
Font Color	In the color bar, click to select the color for the text size of POS			
	information.			
POS Info	Enable the POS Info function, the POS information displays in the			
P03 III0	live view screen.			
	It does not need to configure. The system goes to a new line 1s			
	after no data is received.			
	If you enter a line delimiter, the system goes to a new line when			
	overlay information identifies the line delimiter (hexadecimal).			
Line Break	For example, if line delimiter is F and overlay information is			
	123156789, the local preview and web overlay information is			
	displayed as:			
	123			
	6789			

<u>Step 3</u> Click **Apply** to complete the settings.

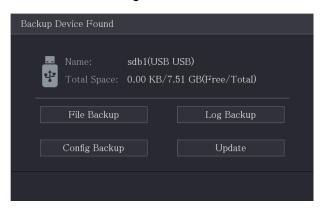

# 5.14 Configuring Backup Settings

# 5.14.1 Finding USB Device

When you inset a USB storage device into the USB port of the Device, the Device detects the USB storage device and pops up **Find USB device** interface, which provides you a shortcut to perform backup and upgrading operations. See Figure 5-193.

For details, see "5.14.2 Backing up Files", "5.21.2 Viewing Log Information", "5.20.4 Exporting and Importing System Settings", and "5.20.6 Updating the Device."

Figure 5-193

# 5.14.2 Backing up Files

You can back up the recorded videos and snapshots.

#### <u>Step 1</u> Select Main Menu > Backup.

The **Backup** interface is displayed.

Figure 5-194

Alarm (								
Registe								
P2P								
		Refresh					Apply	Back

Figure 5-198

<u>Step 2</u> Configure the settings for the Wi-Fi connection parameters.

Table 5-60

Parameter	Description
Connect Automatically	Enable <b>Connect Automatically</b> . After the Device is restarted, it will automatically connect to the nearest hotspot that had been connected successfully.
Refresh	Refresh the hotspot list. The self-adaption function such as adding password is supported if such setting was once configured.

Connect	<ul> <li>In the hotpots list, select a hotspot, and then click Connect.</li> <li>To reconnect the same hotspot, disconnect first and then reconnect.</li> <li>To connect to other hotspot, disconnect from the current connected hotspot first, and then connect to the other hotspot.</li> </ul>
Disconnect	To disconnect from a hotspot, click <b>Disconnect</b> .

<u>Step 3</u> Click **Apply** to complete the settings.

After the Device is connected to a Wi-Fi hotspot, in the **Wi-Fi Info** area, the current hotspot, IP address, subnet mask, and default gateway are displayed.

# 5.15.1.4 Configuring 3G/4G Settings

You can connect a wireless 3G/4G module to the USB port of the Device and then access the Device with the IP address provided by the module.

 $\square$ 

Not all models support this function.

<u>Step 1</u> Connect the wireless 3G/4G module to the USB port of the Device.

#### Step 2 Select Main Menu > NETWORK > 3G/4G.

The **3G/4G** interface is displayed.

Figure 5-199

	🚱 NETWORK		🍪 🖲	\$₀ . 🛡	<b>L</b> .		9 19

#### Supported 3G/4G Modules by the Device

- China Mobile 3G/4G: ZTE MF832S
- China Mobile 4G: ZTE MF832S
- China Unicom 3G: ZTE MF667S, HUAWEI E353U-1

• China Telecom 4G: HUAWEI EC122, ZTE AC2736

 $\square$ 

- If the Device is connected to China Telecom 3G/4G network, you can login the Device with the public IP address through the PC of public internet (The HTTP port is not configured as 80). If the Device is connected to China Unicom or China Mobile 3G network, which are defined as private network, therefore you cannot login the Device through PC that is connected to public internet.
- The Ethernet card names that are displayed on the 3G/4G interface are not constant, and they could be ppp5, ppp6, ppp7 or ppp8 and are different depending on the USB2.0 port on the Device that is connected to the 3G module.
- If you dial to connect to 3G/4G network, you have to keep trying till succeeded. The default gateway could be switched depending on the priority of Ethernet cards.
- The China Unicom and China Mobile 3G/4G modules in USB flash disk style do not support EDGE mode for the moment.

# 5.15.1.5 Configuring PPPoE Settings

PPPoE is another way for the Device to access the network. You can establish network connection by configuring PPPoE settings to give the Device a dynamic IP address in the WAN. To use this function, firstly you need to obtain the user name and password from the Internet Service Provider.

#### Step 1 Select Main Menu > NETWORK > PPPoE.

The **PPPoE** interface is displayed.

🚱 NETWORK	🍪 🚔 🍫 🛡	<b>_</b> *	
TCP/IP			
Port			
Wi-Fi			
3G/4G			
> PPPoE			
DDNS			
UPnP

P2P			
			Apply Back

Figure 5-201

<u>Step 2</u> Enable the PPPoE function.

- <u>Step 3</u> In the **Username** box and **Password** box, enter the user name and password accordingly provided by the Internet Service Provider.
- <u>Step 4</u> Click **Apply** to complete the settings.

The system pops up a message to indicate the successfully saved. The IP address appears on the PPPoE interface. You can use this IP address to access the Device.

When the PPPoE function is enabled, the IP address on the **TCP/IP** interface cannot be modified.

## 5.15.1.6 Configuring DDNS Settings

When the IP address of the Device changes frequently, the DDNS function can dynamically refresh the correspondence between the domain on DNS and the IP address, ensuring you access the Device by using the domain.

### Preparing for Configuration

Confirm if the Device supports the DDNS Type and log in the website provided by the DDNS service provider to register the information such as domain from PC located in the WAN.

After you have registered and logged in the DDNS website successfully, you can view the information of all the connected devices under this user name.

### **Configuring Steps**

#### Step 1 Select Main Menu > NETWORK > DDNS.

The **DDNS** interface is displayed.

	🚱 NETWORK	🍪 🚔 🌣	⋓	<b>L</b> o	LIVE	💄 🕒 🗸 📖

Table 5-63

Parameter	Description						
	Enable the email function.						
Enable							
Enable	There might be risk of sending data to specified email address						
	after it is enabled.						
SMTP Server	Enter the address of SMTP server of sender's email account.						
Port	Enter the port value of SMTP server. The default value setting is						
	25. You can enter the value according to your actual situation.						
Username	Enter the user name and password of sender's email account.						
Password	Enter the user hame and password of sender's entail account.						
Anonymous	If enable the anonymity function, you can login as anonymity.						
	In the Receiver list, select the number of receiver that you want to						
Receiver	receive the notification. The Device supports up to three mail						
	receivers.						
Email Address         Enter the email address of mail receiver(s).							

Parameter	Description					
Sender	Enter the sender's email address. It supports maximum three					
Sender	senders separated by comma.					
	Enter the email subject.					
Subject	Supports Chinese, English and Arabic numerals. It supports					
	maximum 64 characters.					
Attachment	Enable the attachment function. When there is an alarm event, the					
Allachimeni	system can attach snapshots as an attachment to the email.					
	Select the encryption type: NONE, SSL, or TLS.					
Encryption Type						
	For SMTP server, the default encryption type is <b>TLS</b> .					
	This is the interval that the system sends an email for the same					
	type of alarm event, which means, the system does not send an					
Sending Interval	email upon any alarm event.					
(sec.)	This setting helps to avoid the large amount of emails caused by					
	frequent alarm events.					
	The value ranges from 0 to 3600. 0 means that there is no interval.					
Health Mail	Enable the health test function. The system can send a test email					
	to check the connection.					
Sending Interval	This is the interval that the system sends a health test email.					
(Min.)	The value ranges from 30 to 1440. 0 means that there is no					
(10111.)	interval.					
	Click Test to test the email sending function. If the configuration is					
Test	correct, the receiver's email account will receive the email.					
Test						
	Before testing, click <b>Apply</b> to save the settings.					

<u>Step 3</u> Click **Apply** to complete the settings.

# 5.15.1.8 Configuring UPnP Settings

You can map the relationship between the LAN and the WAN to access the Device on the LAN through the IP address on the WAN.

## Preparation for Configuration

- Login the router to set the WAN port to enable the IP address to connect into the WAN.
- Enable the UPnP function at the router.
- Connect the Device with the LAN port on the router to connect into the LAN.
- Select Main Menu > NETWORK > TCP/IP, configure the IP address into the router IP address range, or enable the DHCP function to obtain an IP address automatically.

## **Configuration Steps**

### <u>Step 1</u> Select Main Menu > NETWORK > UPnP.

The **UPnP** interface is displayed.

	🊱 NETWORK			ن 🚱	📥 🌣		\$		LIVE	<b>L</b> 🗗	- DQ

	to extranet, proceed with caution.						
	Indicates the status of UPnP function.						
Status	Offline: Failed.						
	Online: Succeeded.						
I AN IP	Enter IP address of router on the LAN.						
	After mapping succeeded, the system obtains IP address						
	automatically without performing any configurations.						
WAN IP	Enter IP address of router on the WAN.						
	After mapping succeeded, the system obtains IP address						
	automatically without performing any configurations.						

Parameter	Description						
Port Mapping List	<ul> <li>The settings in PAT table correspond to the UPnP PAT table on the router.</li> <li>Service Name: Name of network server.</li> <li>Protocol: Type of protocol.</li> <li>Int. Port: Internal port that is mapped on the Device.</li> <li>Ext. Port: External port that is mapped on the router.</li> <li>To avoid the conflict, when setting the external port, try to use the ports from 1024 through 5000 and avoid popular ports from 1 through 255 and system ports from 256 through 1023.</li> <li>When there are several devices in the LAN, reasonably arrange the ports mapping to avoid mapping to the same external port.</li> <li>When establishing a mapping relationship, ensure the mapping ports are not occupied or limited.</li> <li>The internal and external ports of TCP and UDP must be the same and cannot be modified.</li> <li>Click to modify the external port.</li> </ul>						
Otan O. Oliala Annalia							

<u>Step 3</u> Click **Apply** to complete the settings.

In the browser, enter http://WAN IP: External IP port. You can visit the LAN Device.

## 5.15.1.9 Configuring SNMP Settings

#### $\square$

Not all models support this function.

You can connect the Device with some software such as MIB Builder and MG-SOFT MIB Browser to manage and control the Device from the software.

### Preparation for Configuration

- Install the software that can manage and control the SNMP, such as MIB Builder and MG-SOFT MIB Browser
- Obtain the MIB files that correspond to the current version from the technical support.

### **Configuration Steps**

### Step 1 Select Main Menu > NETWORK > SNMP.

The **SNMP** interface is displayed.

	🚱 NETWORK		3	ت، 🛡	<b>.</b> ₽.⇔	LIVE		
					✓ V3 (Recommended)			
		SNMP Port	161					
			162					
			Public			Private		
;	• SNMP		MD5			MD5		
	Alarm Center		CBC-DES			CBC-DES		
						Apply	Back	

Figure 5-205

<u>Step 2</u> Configure the settings for the SNMP parameters.

Table 5-65

Parameter Description					
Enable Enable the SNMP function.					
Version	Select the check box of SNMP version(s) that you are using.				
	The default version is V3. There is a risk of select V1 or V2.				
SNMP Port	Indicates the monitoring port on the agent program.				
Read Community	Indicates the read/write strings supported by the agent program				
Write Community	Indicates the read/write strings supported by the agent program.				
Trap Address	Indicates the destination address for the agent program to send the				
Trap Address	Trap information.				
Trap Port	Indicates the destination port for the agent program to send the				
	Trap information.				
Read-Only	Enter the user name that is allowed to access the Device and has				
Username	the "Read Only" permission.				
Read/Write	Enter the user name that is allowed to access the Device and has				
Username	the "Read and Write" permission.				
Authentication Type	Includes MD5 and SHA. The system recognizes automatically.				
Authentication					
Password	Enter the password for authentication type and encryption type.				
Encryption	The password should be no less than eight characters.				
Password					

Parameter	Description			
	In the Encryption Type list, select an encryption type. The default			
Encryption Type	setting is CBC-DES.			
Chan 2. Compile the two MID files by MID Duilder				

<u>Step 3</u> Compile the two MIB files by MIB Builder.

<u>Step 4</u> Run MG-SOFT MIB Browser to load in the module from compilation.

- <u>Step 5</u> On the MG-SOFT MIB Browser, enter the Device IP that you want to manage, and then select the version number to query.
- <u>Step 6</u> On the MG-SOFT MIB Browser, unfold the tree-structured directory to obtain the configurations of the Device, such as the channels quantity and software version.

## 5.15.1.10 Configuring Multicast Settings

When you access the Device from the network to view the video, if the access is exceeded, the video will not display. You can use the multicast function to group the IP to solve the problem.

#### Step 1 Select Main Menu > NETWORK > Multicast.

The **Multicast** interface is displayed.

 ICTCP//P
 Enable

 Port
 IP Address

 3G7/4G
 IP Address

 PPPoE
 0000

 DDNS
 (1025 - 65000)

 OPnP
 36666

 Email
 1025 - 65000

Figure 5-206

Step 2 Configure the settings for the multicast parameters.

Table 5-66

Parameter	Description				
Enable	Enable the multicast function.				
IP Address	Enter the IP address that you want to use as the multicast IP.				
IF Addless	The IP address ranges from 224.0.0.0 through 239.255.255.255.				

Port	Enter the port for the multicast. The port ranges from 1025 through	
Poll	65000.	

<u>Step 3</u> Click **Apply** to complete the settings.

You can use the multicast IP address to login the web.

On the web login dialog box, in the **Type** list, select **MULTICAST**. The web will automatically obtain the multicast IP address and join. Then you can view the video through multicast function.

Figure 5-208

<u>Step 2</u>	Configure the	settings for the	register parameters.
---------------	---------------	------------------	----------------------

Table 5-67

Parameter Description			
Enable Enable the register function.			
No. The default value is 1.			
Server IP Address Enter the server IP address or the server domain that y register to.			
Port Enter the port of the server.			
Sub Service ID	This ID is allocated by the server and used for the Device.		

<u>Step 3</u> Click **Apply** to complete the settings.

## 5.15.1.12 Configuring Alarm Center Settings

You can configure the alarm center server to receive the uploaded alarm information. To use this function, the **Report Alarm** check box must be selected. For details about alarm event settings, see "5.10 Alarm Events Settings."

#### Step 1 Select Main Menu > NETWORK > Alarm Center.

The Alarm Center interface is displayed.

	🍪 NETWORK		چ 😂	<b>₽</b> ₀	◙	<b>L</b> .	LIVE	
		Protocol Type	Alarm Center					
			Everyday 🔻	08:00				
>	Alarm Center							
							Apply	Back

Figure 5-209

<u>Step 2</u> Configure the settings for the alarm center parameters.

Table 5-68

Parameter	Description
Enable	Enable the alarm center function.
Protocol Type	In the Protocol Type list, select protocol type. The default is
т ююсог туре	ALARM CENTER.
Server Address	The IP address and communication port of the PC installed with
Port	alarm client.
Auto Report Plan	In the Auto Report Plan list, select time cycle and specific time for
	uploading alarm.

<u>Step 3</u> Click **Apply** to complete the settings.

## 5.15.1.13 Configuring P2P Settings

You can manage the devices by using P2P technology to download the application and register the devices. For details, see "5.1.4.5 Configuring P2P Settings."

# 5.15.2 Configuring Network Testing Settings

### 5.15.2.1 Testing the Network

You can test the network connection status between the Device and other devices. <u>Step 1</u> Select Main Menu > MAINTAIN > Network > Test. The **Network Test** interface is displayed.

Figure 5-210

	🚺 MAINTAIN	🛇 💄	<u>,</u>	S 🦚	Ø 📮	$\cap$		
				Test

				亩	
схб					

- Step 3 Select the audio files that you want to import.
- <u>Step 4</u> Click **OK** to start importing audio files from the USB storage device. If the importing is successful, the audio files will display in the **File Management** interface.

Figure 5-231

1	File Name	Size	Play	Rename	Delete
					Ē

The imported audio files are automatically saved into the HDD, so you do not need to connect to the USB storage device to get the file next time.

- Click to play the audio file.
- Click to rename the audio file.
- Click to delete the audio file.

To decrease or increase the playing volume, move the slider to the left or to the right.

## 5.17.2 Configuring Playing Schedule for Audio Files

You can configure the settings to play the audio files during the defined time period. <u>Step 1</u> Select **Main Menu > AUDIO > Audio Play**.

The Audio Play interface is displayed.

Period		Interval	Loop Output	
00:00 - 24:00	None	<b>▼</b> 60 min.	0 Mic	
00:00 - 24:00	None	<b>▼</b> 60 min.	0 Mic	
00:00 - 24:00	None	<b>▼</b> 60 min.	0 Mic	
00:00 - 24:00	None	<b>▼</b> 60 min.	0 Mic	
00:00 - 24:00	None	<b>▼</b> 60 min.	0 Mic	
00:00 - 24:00	None	<b>▼</b> 60 min.	0 Mic	

<u>Step 2</u> Configure the settings for the schedule parameters.

Table 5-71

Parameter	Description
	In the Period box, enter the time. Select the check box to enable
Period	the settings.
	You can configure up to six periods.
File Name	In the File Name list, select the audio file that you want to play for
	this configured period.
Interval	In the Interval box, enter the time in minutes for how often you
Interval	want to repeat the playing.
Roppot	Configure how many times you want to repeat the playing in the
Repeat	defined period.
	Includes two options: MIC and Audio. It is MIC by default. The MIC
Output Port	function shares the same port with talkback function and the latter
	has the priority.

#### Ш

• The finish time for audio playing is decided by audio file size and the configured interval.

Playing priority: Alarm event > Talkback > Trial listening > Audio file.

Step 3 Click Apply to complete the settings.

# 5.18 Storage Management

Storage management function manages the stored resources such as recorded video files and storage space. The function aims at providing easier operation and improving the storage efficiency.

# 5.18.1 Configuring Basic Settings

#### <u>Step 1</u> Select Main Menu > STORAGE > Basic.

The **Basic** interface is displayed.

Figure 5-233
--------------

	STORAGE	G	🔔 🌣	◙	<b>.</b>		[	LIVE	<b>L</b> G	
>										
			Overwrite							
	Disk Manager		Time Length			60				
			Never							
							Арр	oly	Bao	k

<u>Step 2</u> Configure the settings for the basic settings parameters.

Table 5-72

Parameter	Description			
Disk Full	<ul> <li>Configure the settings for the situation all the read/write discs are full.</li> <li>Select Stop to stop recording</li> <li>Select Overwrite to overwrite the recorded video files always from the earliest time.</li> </ul>			
Create Video Files	Configure the time length and file length for each recorded video.			
Delete Expired Files	Configure whether to delete the old files and if yes, configure the days.			

<u>Step 3</u> Click **Apply** to complete the settings.

# 5.18.2 Configuring the Recording and Snapshot Schedule

The system starts recording and taking snapshot according to the configured schedule. For details, see "5.1.4.9 Configuring Recorded Video Storage Schedule" and "5.1.4.10 Configuring Snapshot Storage Schedule."

# 5.18.3 Configuring Disk Manager

You can view the HDD information, format HDD, and configure the HDD type through HDD manager.

Step 1 Select Main Menu > STORAGE > Disk Manager.

The **Disk Manager** interface is displayed.

In the table, you can view the information of current HDD, such as device name, HDD type, status, total space and free space, and serial number of the HDD port.

Figure	5-234
--------	-------

	STORAGE			<b>I</b> (6)	. 🚔 🎝		LIVE	
				Device Name –	Physical Position –	Properties –	Health Status –	Free St 0.00
>						Read/Write 🔻		
	Record Mode							
		For	mat				Apply	Back

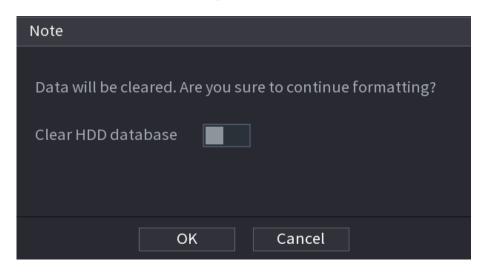

<u>Step 2</u> Configuring the settings for the HDD manager.

- HDD type setting: In the Properties list, select Read/Write, Read Only, and then click Apply to save the settings.
- HDD format: Select the HDD that you want to format, click Format, and enable Clear HDD database in the pop-up message, click OK and enter the password of admin user in the prompted dialog box, click OK and then following the on-screen instructions to complete formatting.

Ш

Formatting HDD will erase all data on the disk, proceed with caution.

Figure 5-235

# 5.18.4 Configuring Record

Record type includes auto and manual record. You can configure record type of main stream and sub stream. See "5.7 Configuring Record Settings".

# 5.18.5 Configuring Advance Settings

Create HDD group, and save main stream, sub stream and snapshot of designated channels to the HDD group.

- If the interface displays that "Current HDD Mode is Quota Group", click Change to HDD Group Mode, and then configure HDD group.
- You can enable either HDD Group Mode or Quota Group. The system prompts to reboot the device each time when you switch the mode.

<u>Step 1</u> Select Main Menu > STORAGE > Disk Group > Disk Group. The Disk Group interface is displayed.

	STORAGE		<b>I</b> 🛞 📥	🌣 🛡	<b>L</b> o		🕈 🗸 👯
		Disk Group

# 5.18.7 Configuring HDD Detecting Settings

Not all models support this function.

HDD detecting function detects the current status of HDD to let you know the HDD performance and replace the defective HDD.

## 5.18.7.1 Checking HDD

You can detect HDD by key area detect and global detect.

The Manual Check interface is displayed.

- Key area detect: Detect the files saved in HDD. The detected bad track can be repaired by • formatting. If there are no files in HDD, the system cannot detect the bad track.
- Global detect: Detect the whole HDD through Windows, which takes time and might affect • the HDD that is recording the video.

#### Step 1 Select Main Menu > STORAGE > Disk Check > Manual Check.

STORAGE 🎯 📥 🌣 🛡 🚣 ■ OK ■ Bad ■ Blocked OK

Figure 5-242

Step 2 In the Type list, select Key Area Detect or Global Check; and in the Disk list, select the HDD that you want to detect.

Step 3 Click Start Check.

The system starts detecting the HDD.

Ш

During detecting, click **Pause** to pause detecting, click **Continue** to restart detecting, and click Stop Detect to stop detecting.

	STORAGE		🚍 🌣	<b>d</b>	LIVE

			<b>I</b>			1920x1080(1080P)	
> Rec Estimate							
	Tota Time		0	y Time ate data is for refere		GB Sele	

Step 2 Click

The **Modify** dialog box is displayed.

You can configure the resolution, frame rate, bit rate and record time for the selected channel.

<u>Step 3</u> Click **OK** to save the settings.

Then the system will calculate the time period that can be used for storage according to the channels settings and HDD capacity.

 $\square$ 

Click **Copy to** to copy the settings to other channels.

### Calculating Recording Time

<u>Step 1</u> On the **Rec Estimate** interface, click the **By Space** tab.

The **By Space** interface is displayed.

Figure 5-248

By Space	By Time		
		TB = <b>0</b>	GB Select
		Days	
Note: The reco			ious when evaluating record period.

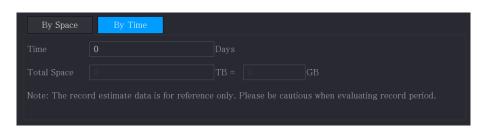

The Select Disk(s) interface is displayed.

<u>Step 3</u> Select the check box of the HDD that you want to calculate.

In the **By Time** tab, in the **Time** box, the recording time is displayed.

Figure 5-249

## Calculating HDD Capacity for Storage

The **By Time** interface is displayed.

Figure 5-250

By Space	By Time		
Time		Days	
Total Space		]TB =	GB
Note: The recor			us when evaluating record period.

<u>Step 2</u> In the **Time** box, enter the time period that you want to record. In the **Total Space** box, the required HDD capacity is displayed.

Figure 5-251

By Space	By Time	
Time		Days
Total Space		TB = 707 GB
Note: The recor		e only. Please be cautious when evaluating record period.

# 5.18.9 Configuring FTP Storage Settings

You can store and view the recorded videos and snapshots on the FTP server.

## Preparation for Configuration

Purchase or download a FTP server and install it on your PC.

Ш

For the created FTP user, you need to set the write permission; otherwise the upload of recorded videos and snapshots might be failed.

## **Configuration Steps**

<u>Step 1</u> Select Main Menu > STORAGE > FTP.

The **FTP** interface is displayed.

<sup>&</sup>lt;u>Step 1</u> On the **Rec Estimate** interface, click the **By Time** tab.

- CTODACE		<b>* =</b>	•	
STORAGE		🖌 🚔 🎝	<b>L</b> o

FTP type	SFTP: Encrypted transmission (recommended)			
Server Address	IP address of FTP server.			
Dort	FTP: The default is 21.			
Port	• SFTP: The default is 22.			
Anonymous	Enter the user name and password to login the FTP server.			
Username	Enable the anonymity function, and then you can login			
Password anonymously without entering the user name and pass				
	Create folder on FTP server.			
Storage Path	• If you do not enter the name of remote directory, system automatically creates the folders according to the IP and time.			
Slorage Falli	• If you enter the name of remote directory, the system creates			
	the folder with the entered name under the FTP root			
	directory first, and then automatically creates the folders			
	according to the IP and time.			

Parameter	Description			
File Size	<ul> <li>Enter the length of the uploaded recorded video.</li> <li>If the entered length is less than the recorded video length, only a section of the recorded video can be uploaded.</li> <li>If the entered length is more than the recorded video length, the whole recorded video can be uploaded.</li> <li>If the entered length is 0, the whole recorded video will be uploaded.</li> </ul>			
Picture Upload Interval (Sec.)	<ul> <li>If this interval is longer than snapshot interval, the system takes the recent snapshot to upload. For example, the interval is 5 seconds, and snapshot interval is 2 seconds per snapshot, the system uploads the recent snapshot every 5 seconds.</li> <li>If this interval is shorter than snapshot interval, the system uploads the snapshot per the snapshot interval. For example, the interval is 5 seconds, and snapshot interval. For example, the interval is 5 seconds, and snapshot interval is 10 seconds per snapshot, the system uploads the snapshot per the snapshot interval is 10 seconds.</li> <li>To configure the snapshot interval, select Main Menu &gt; CAMERA &gt; Encode &gt; Snapshot.</li> </ul>			
Channel	Select the channel that you want to apply the FTP settings.			
Day	Select the week day and set the time period that you want to			
Period 1, Period 2	upload the recorded files. You can set two periods for each week day.			
Record type	Select the record type (Alarm, Intel, MD, and General) that you want to upload. The selected record type will be uploaded during the configured time period.			

Step 3 Click Test.

The system pops up a message to indicate success or failure. If failed, check the network connection or configurations.

<u>Step 4</u> Click **Apply** to complete the settings.

# 5.19 Security Center

You can set security options to strengthen device security and use the device in a much safer way.

# 5.19.1 Security Status

Security scanning helps get a whole picture of device security status. You can scan user, service and security module status for detailed information about the security status of the device.

**Detecting User and Service** 

 $\square$ 

Green icon represents a healthy status of the scanned item, and orange icon represents a risky status.

- Login authentication: When there's a risk in the login authentication, the icon will be in orange to warn risk. You can click **Details** to see the detailed risk description.
- Configuration Security: When there's a risk in the device configuration, the icon will be in orange to warn risk. You can click **Details** to see the detailed risk description.

# 5.20 Configuring System Settings

# 5.20.1 Configuring General System Settings

You can configure the device basic settings, time settings, and holiday settings.

For details about basic and time settings, see "5.1.4.2 Configuring General Settings" and "5.1.4.3 Configuring Date and Time Settings."

To configure the holiday settings, do the following:

Step 1 Select Main Menu > SYSTEM > General > Holiday.

The Holiday interface is displayed.

 • General
 Basic
 DateSTime
 Holder

 • General
 0
 Status
 Name
 Date

# 5.20.2 Configuring RS-232 Settings

You can configure serial port function, Baud rate and other parameters.

Only some series products support this RS-232.

### Select Main Menu > SYSTEM > RS232.

The **RS232** interface is displayed.

GENERAL	Function	Console	
> RS232			
	Baud Rate	115200	
	Data Bits	8	
	Stop Bits	1	
	Parity	None	

#### Table 5-82

Parameter	Description
Function	<ul> <li>Select serial port control protocol.</li> <li>Console: Upgrade the program and debug with the console and mini terminal software.</li> <li>Keyboard: Control this Device with special keyboard.</li> <li>Adapter: Connect with PC directly for transparent transmission of data.</li> <li>Protocol COM: Configure the function to protocol COM, in order to overlay card number.</li> <li>PTZ Matrix: Connect matrix control.</li> <li>It is <b>Console</b> by default.</li> </ul>
Baud Rate	Select Baud rate, which is 115200 by default.
Data Bits	It ranges from 5 to 8, which is 8 by default.
Stop Bits	It includes 1 and 2.
Parity	It includes none, odd, even, mark and null. It is none by default.

# 5.20.3 Configuring System Maintenance Settings

When the Device has been running for a long time, you can configure the auto reboot when the Device is not working. You can also configure the case fan mode to reduce noise and extend the service life.

<u>Step 1</u> Select Main Menu > MAINTAIN > Manager > Maintenance.

The Maintenance interface is displayed.

Figure 5-	-272
-----------	------

🐔 MAINTAIN	🛇 💄	<u>s</u>	S 🦚	¢ 📮	LIVE	1
Log	Maintenance					
System Info						
Network	Never					
> Manager						
	Always					
					Apply	Back

<u>Step 2</u> Configure the settings for the system maintenance parameters.

Table 5-83

Parameter	Description
Auto Reboot	In the Auto Reboot list, select the reboot time.
Case Fan Mode	In the <b>Case Fan Mode</b> list, you can select <b>Always</b> or <b>Auto</b> . If you select <b>Auto</b> , the case fan will stop or start according to the external conditions such as the Device temperature.

<u>Step 3</u> Click **Apply** to complete the settings.

# 5.20.4 Exporting and Importing System Settings

You can export or import the Device system settings if there are several Devices that require the same setup.

 $\square$ 

- The IMP/EXP interface cannot be opened if the backup operation is ongoing on the other interfaces.
- When you open the IMP/EXP interface, the system refreshes the devices and sets the current directory as the first root directory.
- Click Format to format the USB storage device.

## **Exporting System Settings**

### <u>Step 1</u> Select Main Menu > MAINTAIN > Manager > Import/Export. The Import/Export interface is displayed.

Figure 5-273

<ul> <li>MAINTAIN</li> </ul>	⊗	<u>9</u> -	I 🕥 🦚 🗘		LIVE

		New Folder				Import	Export

### Step 4 Click Export.

There is a folder under the name style of "Config\_[YYYYMMDDhhmmss]". Double-click this folder to view the backup files.

## Importing System Settings

- <u>Step 1</u> Insert a USB storage device containing the exported configuration files from another Device) into one of the USB ports on the Device.
- <u>Step 2</u> Select Main Menu > SYSTEM > Import/Export. The Import/Export interface is displayed.
- <u>Step 3</u> Click **Refresh** to refresh the interface.

The connected USB storage device is displayed.

- <u>Step 4</u> Click on the configuration folder (under the name style of "Config\_[YYYYMMDDhhmmss]") that you want to import.
- Step 5 Click Import.

The Device will reboot after the imported is succeeded.

# 5.20.5 Restoring Default Settings

Only Admin account supports this function.

You can select the settings that you want to restore to the factory default.

<u>Step 1</u> Select Main Menu > MAINTAIN > Manager > Default.

The **Default** interface is displayed.

🕰 MAINTAIN	🛇 🤳 🙊 晶 🕥 🌈 📮 🎧 🛛 💷 📾
Log	Maintenance Import/Export Default Update
System Info	Default All the parameters will be restored to default settings except network, user management

> Manager	Factory Defaults Completely recover device parameters to factory default.
	ractory Demants Completely recover device parameters to factory demant.
	Back

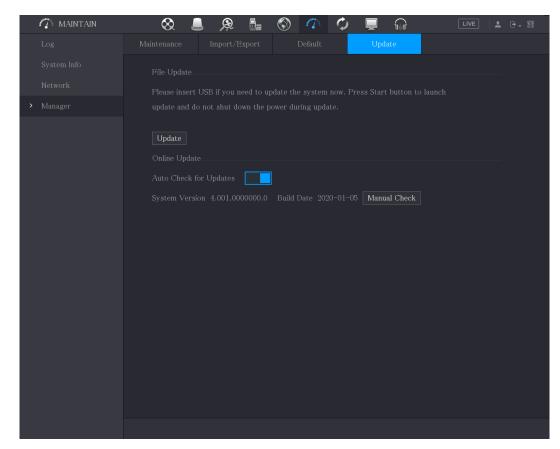

<u>Step 2</u> Restore the settings.

- Click **Default** to restore all parameters to default settings except parameters such as network, user management.
- Click **Factory Default**, select **OK** and then enter the password of admin user in the prompted dialog box to completely recover device parameters to factory default.

## 5.20.6 Updating the Device

### 5.20.6.1 Updating File

- <u>Step 1</u> Insert a USB storage device containing the upgrade files into the USB port of the Device.
- <u>Step 2</u> Select Main Menu > MAINTAIN > Manager > Update. The Update interface is displayed.

Step 3 Click Upgrade.

The **Upgrade** interface is displayed.

Device Name	sdb1(USB USB)		Refresh For	mat	
	28.91 GB				
	27.96 GB				
Name		Size	Туре	Delete	
				亩	
📄 System Volume				亩	
				<b> </b>

📄 gwh				亩	
🖿 ipc				亩	
File Name					

<u>Step 4</u> Click the file that you want to upgrade.

The selected file is displayed in the Address box.

Step 5 Click OK.

## 5.20.6.2 Performing Online Upgrade

When the Device is connected to Internet, you can use online upgrade function to upgrade the system.

Before using this function, you need to check whether there is any new version by auto check or manual check.

- Auto check: The Device checks if there is any new version available at intervals.
- Manual check: Perform real-time check whether there is any new version available.

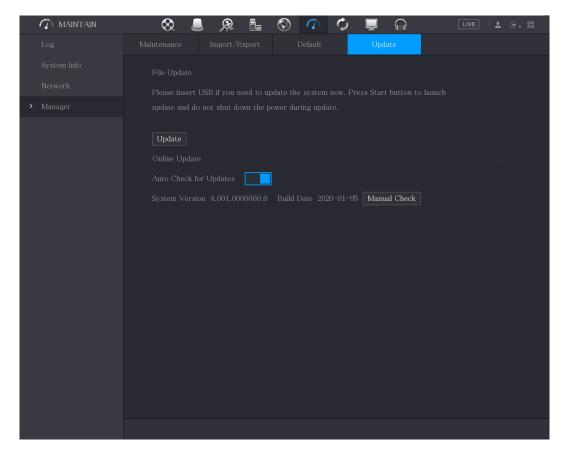

Ensure the correct power supply and network connection during upgrading; otherwise the upgrading might be failed.

Step 1 Select Main Menu > MAINTAIN > Manager > Update.

The **Update** interface is displayed.

Figure 5-278

Step 2 Check whether there is any new version available.

- Auto check : Enable Auto-check for updates.
- Manual check: Click Manual Check.

The system starts checking the new versions. After checking is completed, the check result is displayed.

- If the "It is the latest version" text is displayed, you do not need to upgrade.
- If the text indicating there is a new version, go the step 3.

Step 3 Click Upgrade now.

## 5.20.6.3 Uboot Upgrading

- Under the root directory in the USB storage device, there must be "u-boot.bin.img" file and "update.img" file saved, and the USB storage device must be in FAT32 format.
- Make sure the USB storage device is inserted; otherwise the upgrading cannot be performed.

When starting the Device, the system automatically check whether there is a USB storage device connected and if there is any upgrade file, and if yes and the check result of the upgrade file is correct, the system will upgrade automatically. The Uboot upgrade can avoid the situation that you have to upgrade through +TFTP when the Device is halted.

# 5.21 Viewing Information

You can view the information such as log information, HDD information, and version details.

# 5.21.1 Viewing Version Details

You can view the version details such as device model, system version, and build date.

Select Main Menu > MAINTAIN > System Info > Version, the Version interface is displayed. Figure 5-279

# 5.21.4 Viewing Network Information

You can view the online users, network data transmission details, and test network. For details about testing network, see "5.15.2.1 Testing the Network."

## 5.21.4.1 Viewing Online Users

You can view the online user information and block any user for a period of time.

Select Main Menu > MAINTAIN > Network > Online User, the Online User interface is displayed.

Figure	5-282
--------	-------

🕰 MAINTAIN	🚫 🍯	<u>s</u> .	S 🕐	Ø 📮		
Log	Online User	Network Load	Test			
System Info						
	Userna	me IP	Address	User Login Tin	ne Blocked	
Manager						
	Blocked 6	i0	sec.			

To block an online user, click and then enter the time that you want to block this user. The maximum value you can set is 65535.

The system detects every 5 seconds to check whether there is any user added or deleted, and update the user list timely.

## 5.21.4.2 Viewing the Network Load

Network load means the data flow which measures the transmission capability. You can view the information such as data receiving speed and sending speed.

<u>Step 1</u> Select Main Menu > MAINTAIN > Network > Network Load.

The Network Load interface is displayed.

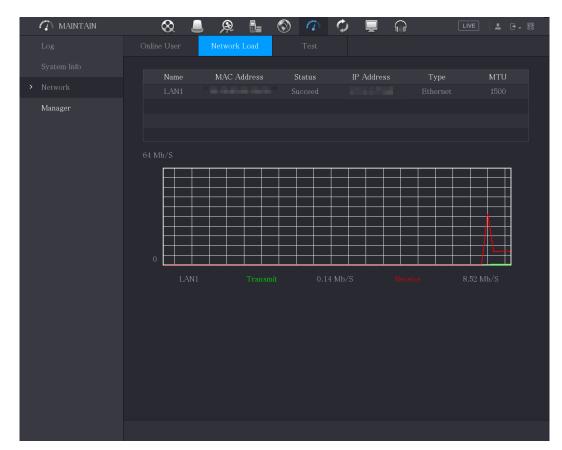

Figure 5-283

<u>Step 2</u> Click the LAN name that you want to view, for example, LAN1.

The system displays the information of data sending speed and receiving speed.

- The default display is LAN1 load.
- Only one LAN load can be displayed at one time.

# 5.21.5 Viewing HDD Information

You can view the HDD quantity, HDD type, total space, free space, status, and S.M.A.R.T information.

Select Main Menu > MAINTAIN > System Info > Disk, the Disk interface is displayed.

🐔 MAINTAIN	$\otimes$	I A	<u> </u>	Ø 📮	$\bigcirc$	
Log	Version	Disl	k BPS	Chann	el Info	
System Info	1*	Device Name	Physical Position	Properties	Total Space	Free Space
	All					0.00 MB
Manager	1*	sda	Host-1	Read/Write	2.72 TB	0.00 MB

Table 5-84

Parameter	Description
No.	Indicates the number of the currently connected HDD. The asterisk (*)
INO.	means the current working HDD.
Device Name	Indicates name of HDD.
Physical Position	Indicates installation position of HDD.
Туре	Indicates HDD type.
Total Space	Indicates the total capacity of HDD.
Free Space	Indicates the usable capacity of HDD.
Health Status	Indicates the health status of HDD.
Status	Indicates the status of the HDD to show if it is working normally.
S.M.A.R.T	View the S.M.A.R.T reports from HDD detecting.

# 5.21.6 Viewing Channel Information

You can view the camera information connected to each channel.

Select Main Menu > MAINTAIN > System Info > Channel Info, the Channel Info interface is displayed.

MAINTAIN	$\otimes$	<b>9 1</b>	S 7	🇘 📮 🎧	
Log				Channel Info	
> System Info

					onnected, AT PoC camera(s) or 4 Idded.	AF PoC camera(s)	can be
						Apply	Back

Table 5-85

Parameter	Description
AF	The maximum power of PoC camera is 6 W.
AT	The maximum power of PoC camera is 12 W.
	Non PoC camera or no camera is connected.

## 5.22 Logging out the Device

On the top right of the Main Menu interface or on any interface after you have entered the Main

Menu, click

- Select Logout, you will log out the device.
- Select **Reboot**, the Device will be rebooted.
- Select **Shutdown**, the Device will be turned off.

If you do not have shutdown authority, enter gesture or password first.

# 6

Web Operations

 $\square$ 

- The interfaces in the Manual are used for introducing the operations and only for reference.
   The actual interface might be different dependent on the model you purchased. If there is inconsistency between the Manual and the actual product, the actual product shall prevail.
- The Manual is a general document for introducing the product, so there might be some functions described for the Device in the Manual not apply to the model you purchased.
- Besides Web, you can use our Smart PSS to login the device. For detailed information, refer to Smart PSS user's manual.

## 6.1 Connecting to Network

#### $\square$

- The factory default IP of the Device is 192.168.1.108.
- The Device supports monitoring on different browsers such as Safari, Firefox, Google to perform the functions such as multi-channel monitoring, PTZ control, and device parameters configurations.
- <u>Step 1</u> Check to make sure the Device has connected to the network.
- <u>Step 2</u> Configure the IP address, subnet mask and gateway for the PC and the Device. For details about network configuration of the Device, see "5.1.4.4 Configuring Network Settings."
- <u>Step 3</u> On your PC, check the network connection of the Device by using "ping \*\*\*.\*\*\*.\*\*\*". Usually the return value of TTL is 255.

## 6.2 Logging in the Web

<u>Step 1</u> Open the IE browser, enter the IP address of the Device, and then press Enter. The Login in dialog box is displayed.

Figure 6-1

<b>Alhua</b> TECHNOLOGY	Web Login
<b>.</b>	
<del>A</del>	
ТСР	
	Forgot Password
Login	

Step 2 Enter the user name and password.

- The default administrator account is **admin**. The password is the one that was configured during initial settings. To security your account, it is recommended to keep the password properly and change it regularly.
  - Click local to display the password.
  - If you forget the password, click Forgot Password to reset the password. For details about resetting the password, see "6.3 Resetting Password."

Step 3 Click Login.

## 6.3 Resetting Password

You can reset the password by the following methods when you forget the password for admin account.

- If the password reset function is enabled, you can use mobile phone to scan the QR code on the local interface or web interface to reset the password.
- If the password reset function is disabled, the system prompts indicating password resetting function is disabled. To reset the password, try either of the following ways:
  - $\diamond$  Login the web with other user account to enable the password reset function.
  - Go to local interface to reset the password. For details, see "5.1.3 Resetting Password."

<u>Step 1</u> Login the Web of the Device.

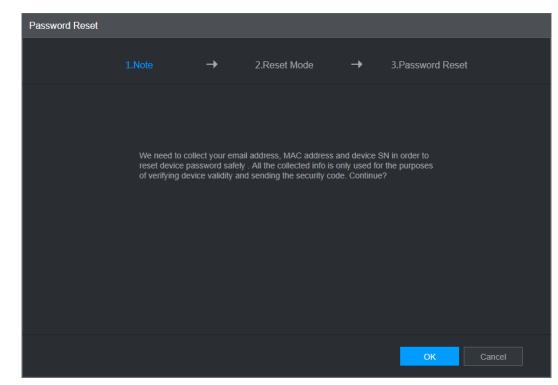

The Login dialog box is displayed.

Figure 6-2

<b>Alhua</b> TECHNOLOGY	Web Login
2	
A	
ТСР	
	Forgot Password
Login	

<u>Step 2</u> Click Forgot Password. The Reset Password interface is displayed.

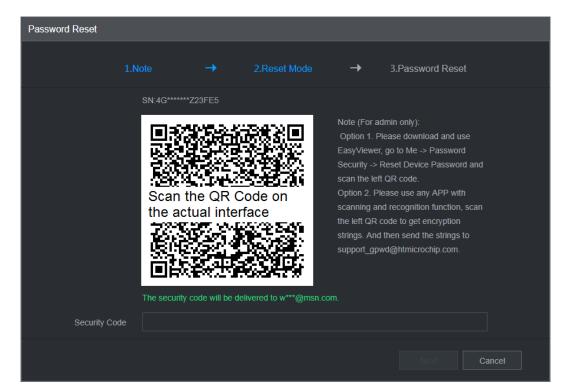

Figure 6-3

The reset type interface is displayed.

Figure 6-4

Step 4 Follow the onscreen instructions to scan the QR code and get the security code.

- $\triangle$
- You can get the security code twice by scanning the same QR code. If you need to get the security code once again, refresh the interface.
- Use the security code received in your email box to reset the password within 24 hours; otherwise the security code becomes invalid.
- Wrong security code entrance up to five times will cause the security code locked for five minutes. After five minutes, you can continue to use this security code.
- In the **Security code** box, enter the security code received in your reserved email box.
- Step 5 Click Next.

The new password resetting interface is displayed.

Figure 6-5

Password Reset					
		<b>→</b>	2.Reset the passwor		
	User Name	admin			
	Password	•••••			
	Confirm Password	•••••			
C.					
				Cancel	Save

<u>Step 6</u> In the **Password** box, enter the new password and enter it again in the **Confirm Password** box.

 $\square$ 

The new password can be set from 8 characters through 32 characters and contains at least two types from number, letter and special characters (excluding"", """, ";", ":" and "&").

<u>Step 7</u> Click **Save**. The password resetting is started.

After resetting is completed, a pop-up message is displayed to indicate the result and you will see the login interface is displayed. Then you can use the new password to login the web.

## 6.4 Web Main Menu

After you have logged in the Web, the main menu is displayed. For detailed operations, you can refer to "5 Local Configurations."

Figure 6-6

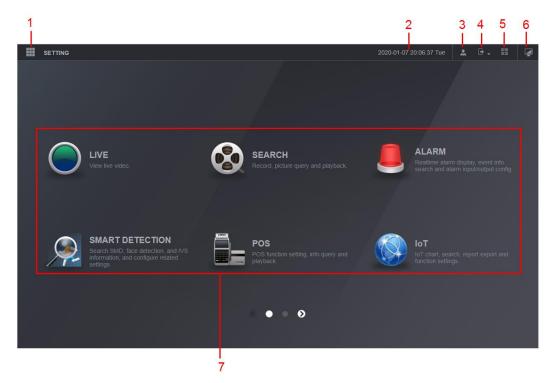

Table 6-1

No.	lcon	Description
1		Includes configuration menu through which you can configure camera settings, network settings, storage settings, system settings, account settings, and view information.
2	None	Displays system date and time.
3	<b>.</b>	When you point to . the current user account is displayed.
4	•	Click , select <b>Logout</b> , <b>Reboot</b> , or <b>Shutdown</b> according to your actual situation.
5		<ul> <li>Displays Cell Phone Client and Device SN QR Code.</li> <li>Cell Phone Client: Use your mobile phone to scan the QR code to add the device into the Cell Phone Client, and then you can start accessing the Device from your cell phone.</li> <li>Device SN: Obtain the Device SN by scanning the QR code. Go to the P2P management platform and add the Device SN into the platform. Then you can access and manage the device in the WAN. For details, refer to the P2P operation manual. You can also configure P2P function in the local configurations. See "5.1.4.5 Configuring P2P Settings."</li> </ul>

No.	lcon	Description
6		Displays the web main menu.
7	None	<ul> <li>Includes eight function tiles: LIVE, VIDEO, ALARM, IVS, IoT, BACKUP, MAINTAIN, DISPLAY, and AUDIO. Click each tile to open the configuration interface of the tile.</li> <li>LIVE: You can perform the operations such as viewing real-time video, configuring channel layout, setting PTZ controls, and using smart talk and instant record functions if needed.</li> <li>VIDEO: Search for and play back the recorded video saved on the Device.</li> <li>ALARM: Search for alarm information and configure alarm event actions.</li> <li>IVS: Configure the behavior detections by drawing rules for detecting tripwire, intrusion, abandoned objects, and missing objects.</li> <li>IoT: You can view, search and export the temperature and humidity data of camera and configure the alarm event settings.</li> <li>BACKUP: Search and back up the video files to the local PC or external storage device such as USB storage device.</li> <li>MAINTAIN: You can view log and system information, test network and do other maintenance work.</li> <li>DISPLAY: Configure the display effect such as displaying content, image transparency, and resolution, and enable the zero-channel function.</li> <li>AUDIO: Manage audio files and configure the playing schedule. The audio file can be played in response to an alarm event if the voice prompts function is enabled.</li> </ul>

# 7 FAQ

#### 1. DVR cannot boot up properly.

- There are following possibilities:
- Input power is not correct.
- Power connection is not correct.
- Power switch button is damaged.
- Program upgrade is wrong.
- HDD malfunction or something wrong with HDD jumper configuration.
- Seagate DB35.1, DB35.2, SV35 or Maxtor 17-g has compatibility problem. Upgrade to the latest version to solve this problem.
- Front panel error.
- Main board is damaged.

#### 2. DVR frequently shuts down or stops running.

There are following possibilities:

- Input voltage is not stable or it is too low.
- HDD malfunction or something wrong with jumper configuration.
- Button power is not enough.
- Front video signal is not stable.
- Working environment is too harsh, too much dust.
- Hardware malfunction.

#### 3. Hard disk cannot be detected.

There are following possibilities:

- HDD is broken.
- HDD jumper is damaged.
- HDD cable connection is loose.
- Main board SATA port is broken.

#### 4. There is no video output whether it is one-channel, multiple-channel or all-channel output.

There are following possibilities:

- Program is not compatible. Upgrade to the latest version.
- Brightness is 0. Restore factory default setup.
- There is no video input signal or it is too weak.
- Check privacy mask setup or your screen saver.
- DVR hardware malfunctions.

#### 5. Real-time video color is distorted.

There are following possibilities:

- When using BNC output, NTSC and PAL setup is not correct. The real-time video becomes black and white.
- DVR and monitor resistance is not compatible.
- Video transmission is too long or degrading is too huge.
- DVR color or brightness setup is not correct.

#### 6. Cannot search local records.

There are following possibilities:

- HDD jumper is damaged.
- HDD is broken.
- Upgraded program is not compatible.
- The recorded file has been overwritten.
- Record function has been disabled.

#### 7. Video is distorted when searching local records.

There are following possibilities:

- Video quality setup is too low.
- Program read error, bit data is too small. There is mosaic in the full screen. Restart the DVR to solve this problem.
- HDD data jumper error.
- HDD malfunction.
- DVR hardware malfunctions.

#### 8. No audio under monitor state.

There are following possibilities:

- It is not a power picker.
- It is not a power acoustics.
- Audio cable is damaged.
- DVR hardware malfunctions.

#### 9. There is audio under monitor state but no audio under playback state.

There are following possibilities:

- Setup is not correct. Enable audio function.
- Corresponding channel has no video input. Playback is not continuous when the screen is blue.

#### 10. System time is not correct.

There are following possibilities:

- Setup is not correct.
- Battery contact is not correct or voltage is too low.
- Crystal oscillator is broken.

#### 11. Cannot control PTZ on DVR.

There are following possibilities:

- Front panel PTZ error.
- PTZ decoder setup, connection or installation is not correct.
- Cable connection is not correct.
- PTZ setup is not correct.
- PTZ decoder and DVR protocol is not compatible.
- PTZ decoder and DVR address is not compatible.
- When there are several decoders, add 120 Ohm between the PTZ decoder A/B cables furthest end to delete the reverberation or impedance matching. Otherwise the PTZ control is not stable.
- The distance is too far.

#### 12. Motion detection function does not work.

There are following possibilities:

- Period setup is not correct.
- Motion detection zone setup is not correct.

- Sensitivity is too low.
- For some versions, there is hardware limit.

#### 13. Cannot log in client-end or web.

There are following possibilities:

- For Windows 98 or Windows ME user, update your system to Windows 2000 sp4. Or you can install client-end software of lower version. Note that our DVR is not compatible with Windows VISTA control.
- ActiveX control has been disabled.
- No dx8.1 or higher. Upgrade display card driver.
- Network connection error.
- Network setup error.
- Password or user name is invalid.
- Client-end is not compatible with DVR program.

#### 14. There is only mosaic no video when preview or playback video file remotely.

There are following possibilities:

- Network fluency is not good.
- Client-end resources are limit.
- There is multiple-cast group setup in DVR. This mode can result in mosaic. Usually we do not recommend this mode.
- There is privacy mask or channel protection setup.
- Current user has no right to monitor.
- DVR local video output quality is not good.

#### **15. Network connection is not stable.**

There are following possibilities:

- Network is not stable.
- IP address conflict.
- MAC address conflict.
- PC or DVR network card is not good.

#### 16. Burn error /USB back error.

There are following possibilities:

- Burner and DVR are in the same data cable.
- System uses too much CPU resources. Stop record first and then begin backup.
- Data amount exceeds backup device capacity. It might result in burner error.
- Backup device is not compatible.
- Backup device is damaged.

#### 17. Keyboard cannot control DVR

There are following possibilities:

- DVR serial port setup is not correct.
- Address is not correct.
- When there are several switchers, power supply is not enough.
- Transmission distance is too far.

#### 18. Alarm signal cannot be disarmed.

There are following possibilities:

- Alarm setup is not correct.
- Alarm output has been open manually.
- Input device error or connection is not correct.

• Some program versions might have this problem. Upgrade your system.

#### 19. Alarm function is null.

There are following possibilities:

- Alarm setup is not correct.
- Alarm cable connection is not correct.
- Alarm input signal is not correct.
- There are two loops connect to one alarm device.

#### 20. Remote control does not work.

There are following possibilities:

- Remote control address is not correct.
- Distance is too far or control angle is too small.
- Remote control battery power is low.
- Remote control is damaged or DVR front panel is damaged.

#### 21. Record storage period is not enough.

There are following possibilities:

- Camera quality is too low. Lens is dirty. Camera is installed against the light. Camera aperture setup is not correct.
- HDD capacity is not enough.
- HDD is damaged.

#### 22. Cannot playback the downloaded file.

There are following possibilities:

- There is no media player.
- No DXB8.1 or higher graphic acceleration software.
- There is no DivX503Bundle.exe control when you play the file transformed to AVI via media player.
- No DivX503Bundle.exe or ffdshow-2004 1012 .exe in Windows XP OS.

#### 23. Forgot local menu operation password or network password

Contact your local service engineer or our sales person for help. We can guide you to solve this problem.

#### 24. When I login via HTTPS, a dialogue says the certificate for this website is for other address.

Ceate server certificate again.

#### 25. When I login via HTTPS, a dialogue says the certificate is not trusted.

Download root certificate again.

#### 26. When I login via HTTPS, a dialogue says the certificate has expired or is not valid yet.

Make sure that your PC time is the same as the device time.

#### 27. I connect the general analog camera to the device, there is no video output.

There are following possibilities:

- Check camera power supplying, data cable connection and other items.
- This series device does not support the analog camera of all brands. Make sure that the device supports general standard definition analog camera.

## 28. I connect the standard definition analog camera or the coaxial camera to the device, there is no video output.

There are following possibilities:

• Check camera power supplying, or camera data cable connection.

 For the product supports analog standard definition camera/HD camera, you need to go to the Main Menu > CAMERA > CHANNEL TYPE to select corresponding channel type and then restart the DVR.

#### 29. I cannot connect to the IP channel.

There are following possibilities:

- Check the camera is online or not.
- Check IP channel setup is right or not (such as IP address, user name, password, connection protocol, and port number).
- The camera has set the whitelist (Only the specified devices can connect to the camera).

## 30. After I connected to the IP channel, the one-window output is OK, but there is no multiple-window output.

There are following possibilities:

- Check the sub stream of the camera has been enabled or not.
- Check the sub stream type of the camera is H.264 or not.
- Check the device supports camera sub stream resolution or not (such as 960H, D1, and HD1).

## 31. After I connected to the IP channel, the multiple-window output is OK, but there is no one-window output.

There are following possibilities:

- Check there is video from the IP channel or not. Go to the Main Menu > MAINTAIN > System Info > BPS to view bit stream real-time information.
- Check the main stream of the camera has been enabled or not.
- Check the main stream type of the camera is H.264 or not.
- Check the device supports camera main stream resolution or not (such as 960H, D1, and HD1).
- Check camera network transmission has reached the threshold or not. Check the online user of the camera.

## 32. After I connected to the IP channel, there is no video output in the one-window or the multiple-window mode. But I can see there is bit stream.

There are following possibilities:

- Check the main stream/sub stream type of the camera is H.264 or not.
- Check the device supports camera main stream/sub stream resolution or not (such as 1080P, 720P, 960H, D1, and HD1).
- Check the camera setup. Make sure that it supports the products of other manufacturers.

#### 33. DDNS registration failed or cannot access the device domain name.

There are following possibilities:

- Check the device is connected to the WAN. Check the device has got the IP address if the PPPoE can dial. If there is a router, check the router to make sure the device IP is online.
- Check the corresponding protocol of the DDNS is enabled. Check the DDNS function is OK or not.
- Check DNS setup is right or not. Default Google DNS server is 8.8.8.8, 8.8.5.5. You can use different DNS provided by your ISP.

#### 34. I cannot use the P2P function on my cell phone or the WEB.

There are following possibilities:

- Check the device P2P function is enabled or not. (Main menu->Setting->Network->P2P)
- Check the device is in the WAN or not.

- Check cell phone P2P login mode is right or not.
- It is the specified device P2P login port or not when you are using P2P client.
- Check user name or password is right or not.
- Check P2P SN is right or not. You can use the cell phone to scan the QR code on the device P2P interface (Main Menu > Network > P2P), or you can use the version information of the WEB to confirm. (For some previous series products, the device SN is the main board SN, it might result in error.)

#### 35. I connect the standard definition camera to the device, there is no video output.

There are following possibilities:

- Check the DVR supports standard definition signal or not. Only some series products support analog standard definition signal, coaxial signal input.
- Check channel type is right or not. For the product supports analog standard definition camera/HD camera, you need to go to the Main Menu > CAMERA > Channel Type to select corresponding channel type (such as analog) and then restart the DVR. In this way, the DVR can recognize the analog standard definition.
- Check camera power supplying, or camera data cable connection.

#### 36. I cannot connect to the IP camera.

There are following possibilities:

- Check DVR supports IP channel or not. Only some series products support A/D switch function, it can switch analog channel to the IP channel to connect to the IP camera. From Main Menu > CAMERA > Channel Type, select the last channel to switch to the IP channel. Some series product products support IP channel extension, it supports N+N mode.
- Check the IPC and the DVR is connected or not. Go to the Main Menu > CAMERA > Camera List to search to view the IP camera is online or not. Or you can go to the Main Menu > MAINTAIN > Network > Test, you can input IP camera IP address and then click the Test button to check you can connect to the IP camera or not.
- Check IP channel setup is right or not (such as IP address, manufacturer, port, user name, password, and remote channel number).

#### **Daily Maintenance**

- Use the brush to clean the board, socket connector and the chassis regularly.
- The device shall be soundly earthed in case there is audio/video disturbance. Keep the device away from the static voltage or induced voltage.
- Unplug the power cable before you remove the audio/video signal cable, RS-232 or RS-485 cable.
- Do not connect the TV to the local video output port (VOUT). It might result in video output circuit.
- Always shut down the device properly. Use the shutdown function in the menu, or you can press the power button in the front panel for at least three seconds to shut down the device. Otherwise it might result in HDD malfunction.
- Make sure the device is away from the direct sunlight or other heating sources. Keep the sound ventilation.
- Check and maintain the device regularly.

#### Appendix 1 Cybersecurity Recommendations

Cybersecurity is more than just a buzzword: it's something that pertains to every device that is connected to the internet. IP video surveillance is not immune to cyber risks, but taking basic steps toward protecting and strengthening networks and networked appliances will make them less susceptible to attacks. Below are some tips and recommendations on how to create a more secured security system.

#### Mandatory actions to be taken for basic equipment network security:

#### 1. Use Strong Passwords

Please refer to the following suggestions to set passwords:

- The length should not be less than 8 characters;
- Include at least two types of characters; character types include upper and lower case letters, numbers and symbols;
- Do not contain the account name or the account name in reverse order;
- Do not use continuous characters, such as 123, abc, etc.;
- Do not use overlapped characters, such as 111, aaa, etc.;

#### 2. Update Firmware and Client Software in Time

- According to the standard procedure in Tech-industry, we recommend to keep your equipment (such as NVR, DVR, IP camera, etc.) firmware up-to-date to ensure the system is equipped with the latest security patches and fixes. When the equipment is connected to the public network, it is recommended to enable the "auto-check for updates" function to obtain timely information of firmware updates released by the manufacturer.
- We suggest that you download and use the latest version of client software.

#### "Nice to have" recommendations to improve your equipment network security:

#### 1. Physical Protection

We suggest that you perform physical protection to equipment, especially storage devices. For example, place the equipment in a special computer room and cabinet, and implement well-done access control permission and key management to prevent unauthorized personnel from carrying out physical contacts such as damaging hardware, unauthorized connection of removable equipment (such as USB flash disk, serial port), etc.

#### 2. Change Passwords Regularly

We suggest that you change passwords regularly to reduce the risk of being guessed or cracked.

#### 3. Set and Update Passwords Reset Information Timely

The equipment supports password reset function. Please set up related information for password reset in time, including the end user's mailbox and password protection questions. If the information changes, please modify it in time. When setting password protection questions, it is suggested not to use those that can be easily guessed.

#### 4. Enable Account Lock

The account lock feature is enabled by default, and we recommend you to keep it on to guarantee the account security. If an attacker attempts to log in with the wrong password several times, the corresponding account and the source IP address will be locked.

#### 5. Change Default HTTP and Other Service Ports

We suggest you to change default HTTP and other service ports into any set of numbers between 1024~65535, reducing the risk of outsiders being able to guess which ports you are using.

#### 6. Enable HTTPS

We suggest you to enable HTTPS, so that you visit Web service through a secure communication channel.

#### 7. Enable Whitelist

We suggest you to enable whitelist function to prevent everyone, except those with specified IP addresses, from accessing the system. Therefore, please be sure to add your computer's IP address and the accompanying equipment's IP address to the whitelist.

#### 8. MAC Address Binding

We recommend you to bind the IP and MAC address of the gateway to the equipment, thus reducing the risk of ARP spoofing.

#### 9. Assign Accounts and Privileges Reasonably

According to business and management requirements, reasonably add users and assign a minimum set of permissions to them.

#### 10. Disable Unnecessary Services and Choose Secure Modes

If not needed, it is recommended to turn off some services such as SNMP, SMTP, UPnP, etc., to reduce risks.

If necessary, it is highly recommended that you use safe modes, including but not limited to the following services:

- SNMP: Choose SNMP v3, and set up strong encryption passwords and authentication passwords.
- SMTP: Choose TLS to access mailbox server.
- FTP: Choose SFTP, and set up strong passwords.
- AP hotspot: Choose WPA2-PSK encryption mode, and set up strong passwords.

#### 11. Audio and Video Encrypted Transmission

If your audio and video data contents are very important or sensitive, we recommend that you use encrypted transmission function, to reduce the risk of audio and video data being stolen during transmission.

Reminder: encrypted transmission will cause some loss in transmission efficiency.

#### 12. Secure Auditing

- Check online users: we suggest that you check online users regularly to see if the device is logged in without authorization.
- Check equipment log: By viewing the logs, you can know the IP addresses that were used to log in to your devices and their key operations.

#### 13. Network Log

Due to the limited storage capacity of the equipment, the stored log is limited. If you need to save the log for a long time, it is recommended that you enable the network log function to ensure that the critical logs are synchronized to the network log server for tracing.

#### 14. Construct a Safe Network Environment

In order to better ensure the safety of equipment and reduce potential cyber risks, we recommend:

• Disable the port mapping function of the router to avoid direct access to the intranet devices from external network.

- The network should be partitioned and isolated according to the actual network needs. If there are no communication requirements between two sub networks, it is suggested to use VLAN, network GAP and other technologies to partition the network, so as to achieve the network isolation effect.
- Establish the 802.1x access authentication system to reduce the risk of unauthorized access to private networks.

The abbreviations in this glossary are related to the Manual.

Abbreviations	Full term
BNC	Bayonet Nut Connector
CBR	Constant Bit Rate
CIF	Common Intermediate Format
DDNS	Dynamic Domain Name Service
DHCP	Dynamic Host Configuration Protocol
DNS	Domain Name System
DST	Daylight Saving Time

UDP	User Datagram Protocol
UPnP	Universal Plug and Play
VBR	Variable Bit Rate

Abbreviations	Full term
VGA	Video Graphics Array
WAN	Wide Area Network

Calculate total capacity needed by each DVR according to video recording (video recording type and video file storage time).

<u>Step 1</u> According to Formula (1) to calculate storage capacity  $q_i$  that is the capacity of each channel needed for each hour, unit MB.

Formula (1): 
$$q_i = d_i \div 8 \times 3600 \div 1024$$

In the formula:  $d_i$  means the bit rate, unit Kbit/s

<u>Step 2</u> After video time requirement is confirmed, according to Formula (2) to calculate the storage capacity  $m_i$ , which is storage of each channel needed unit MB.

Formula (2): 
$$m_i = q_i \times h_i \times D_i$$

In the formula:

- $h_i$  means the recording time for each day (hour)
- $D_i$  means number of days for which the video shall be kept
- <u>Step 3</u> According to Formula (3) to calculate total capacity (accumulation)  $q_T$  that is needed for all channels in the DVR during **scheduled video recording**.

Formula (3): 
$$q_T = \sum_{i=1}^{c} m_i$$

In the formula: c means total number of channels in one DVR

<u>Step 4</u> According to Formula (4) to calculate total capacity (accumulation)  $q_T$  that is needed for all channels in DVR during **alarm video recording (including motion detection)**.

Formula (4): 
$$q_T = \sum_{i=1}^{c} m_i \star a\%$$

In the formula: a% means alarm occurrence rate

You can refer to the following table for the file size in one hour per channel. (All the data listed below are for reference only.)

Bit stream size (max)	File size	Bit stream size (max)	File Size
96 Kbps	42 MB	128 Kbps	56 MB
160 Kbps	70 MB	192 Kbps	84 MB
224 Kbps	98 MB	256 Kbps	112 MB
320 Kbps	140 MB	384 Kbps	168 MB
448 Kbps	196 MB	512 Kbps	225 MB

Bit stream size (max)	File size	Bit stream size (max)	File Size
640 Kbps	281 MB	768 Kbps	337 MB
896 Kbps	393 MB	1024 Kbps	450 MB
1280 Kbps	562 MB	1536 Kbps	675 MB
1792 Kbps	787 MB	2048 Kbps	900 MB

## Appendix 4.1 Compatible USB list

Manufacturer	Model	Capacity

## Appendix 8.1 What Is the Surge

Surge is a short current or voltage change during a very short time. In the circuit, it lasts for microsecond. In a 220V circuit, the 5KV or 10KV voltage change during a very short time (about microseconds) can be called a surge. The surge comes from two ways: external surge and internal surge.

- The external surge: The external surge mainly comes from the thunder lightning. Or it comes from the voltage change during the on/off operation in the electric power cable.
- The internal surge: The research finds 88% of the surge from the low voltage comes from the internal of the building such as the air conditioning, elevator, electric welding, air compressor, water pump, power button, duplicating machine and other device of inductive load.

The lightning surge is far above the load level the PC or the micro devices can support. In most cases, the surge can result in electric device chip damage, PC error code, accelerating the part aging, data loss and etc. Even when a small 20 horsepower inductive engine boots up or stops, the surge can reach 3000V to 5000V, which can adversely affect the electronic devices that use the same distribution box.

To protect the device, you need to evaluate its environment, the lighting affection degree objectively. Because surge has close relationship with the voltage amplitude, frequency, network structure, device voltage-resistance, protection level, ground and etc. The thunder proof work shall be a systematic project, emphasizing the all-round protection (including building, transmission cable, device, ground and etc.). There shall be comprehensive management and the measures shall be scientific, reliable, practical and economic. Considering the high voltage during the inductive thundering, the International Electrotechnical Commission (IEC) standard on the energy absorbing step by step theory and magnitude classification in the protection zone, you need to prepare multiple precaution levels.

You can use the lightning rod, lightning strap or the lightning net to reduce the damage to the building, personal injury or the property.

The lightning protection device can be divided into three types:

- Power lightning arrester: There are 220V single-phrase lightning arrester and 380V three-phrase lightening arrester (mainly in parallel connection, sometimes use series connection) You can parallel connect the power lightning arrester in the electric cable to reduce the short-time voltage change and release the surge current. From the BUS to the device, there are usually three levels so that system can reduce the voltage and release the current step by step to remove the thunderstorm energy and guarantee the device safety. You can select the replaceable module type, the terminal connection type and portable socket according to your requirement.
- Signal lightning arrester: This device is mainly used in the PC network, communication system. The connection type is serial connection. Once you connected the signal lightning

arrestor with the signal port, it can cut the channel of the thunderstorm to the device, and on the other hand, it can discharge the current to the ground to guarantee the device proper work. The signal lightning arrester has many specifications, and widely used in many devices such as telephone, network, analog communication, digital communication, cable TV and satellite antenna. For all the input port, especially those from the outdoor, you need to install the signal lightning arrester.

• Antenna feed cable lightning arrester: It is suitable for antenna system of the transmitter or the device system to receive the wireless signal. It uses the serial connection too.

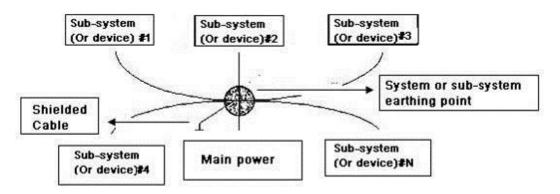

Please note, when you select the lighting arrester, please pay attention to the port type and the earthing reliability. In some important environment, you need to use special shielded cable. Do not parallel connect the thunder proof ground cable with the ground cable of the lightning rod. Please make sure they are far enough and grounded respectively.

### Appendix 8.2 The Earthing Modes

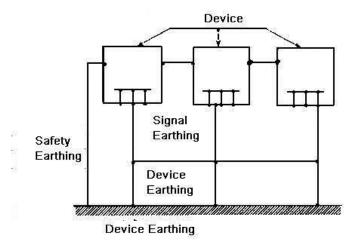

We all know the earthing is the most complicated technology in the electromagnetism compatibility design since there is no systematic theory or module. The earthing has many modes, but the selection depends on the system structure and performance.

The following are some successfully experience from our past work.

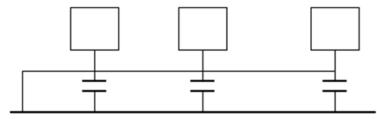

• **One-point ground:** In the following figure you can see there is a one-point ground. This connection provides common point to allow signal to be transmitted in many circuits. If there is no common point, the error signal transmission occurred. In the one-point ground mode, each circuit is just grounded only and they are connected at the same point. Since there is only one common point, there is no circuit and so, there is no interference.

• **Multiple-point ground:** In the following figure, you can see the internal circuit uses the chassis as the common point. While at the same time, all devices chassis use the earthing as the common point. In this connection, the ground structure can provide the lower ground resistance because when there are multiple-point grounds; each ground cable is as short as possible. And the parallel cable connection can reduce the total conductance of the ground conductor. In the high-frequency circuit, you need to use the multiple-point ground mode and each cable needs to connect to the ground. The length shall be less than the 1/20 of the signal wavelength.

 Mixed ground: The mix ground consists of the feature of the one-point ground and multiple-point ground. For example, the power in the system needs to use the one-point ground mode while the radio frequency signal requires the multiple-point ground. So, you can use the following figure to earth. For the direct current (DC), the capacitance is open circuit and the circuit is one-point ground. For the radio frequency signal, the capacitance is conducive and the circuit adopts multiple-point ground.

When connecting devices of huge size (the device physical dimension and connection cable is big comparing with the wave path of existed interference), then there are possibility of interference when the current goes through the chassis and cable. In this situation, the interference circuit path usually lies in the system ground circuit.

When considering the earthing, you need to think about two aspects: One is the system compatibility, and the other is the external interference coupling into the earth circuit, which results in system error. For the external interference is not regular, it is not easy to resolve.

## Appendix 8.3 Thunder Proof Ground Method in the Monitor System

## • The monitor system shall have sound thunder proof earthing to guarantee personnel safety and device safety.

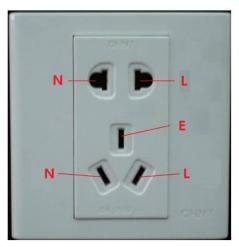

- The monitor system working ground resistance shall be less than 1Ω.
- The thunder proof ground shall adopt the special ground cable from the monitor control room to the ground object. The ground cable adopts copper insulation cable or wire and its ground section shall be more than 20mm<sup>2</sup>.
- The ground cable of the monitor system can not short circuit or mixed connected with the strong alternative current cable.
- For all the ground cables from the control room to the monitor system or ground cable of other monitor devices, please use the copper resistance soft cable and its section shall be

more than 4mm<sup>2</sup>.

- The monitor system usually can adopt the one-point ground.
- Please connect the ground end of 3-pin socket in the monitor system to the ground port of the system (protection ground cable)

## Appendix 8.4 The Shortcut Way to Check the Electric System by Digital Multimeter

For 220V AC socket, from the top to the bottom, E (ground cable), N (neutral cable), L(live cable). Please refer to the following figure.

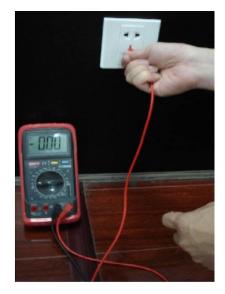

There is a shortcut way to check these thee cables connection are standard or not (not the accurate check).

In the following operations, the multimeter range shall be at 750V.

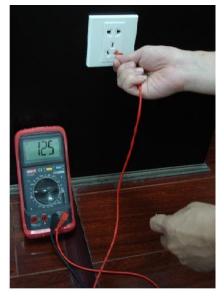

#### For E (earth cable)

Turn the digital multimeter to 750V AC, use your one hand to hold the metal end, and then the other hand insert the pen to the E port of the socket. See the following figure. If the multimeter shows 0, then you can see current earth cable connection is standard. If the value is more than 10, then you can know there is inductive current and the earth cable connection is not proper.

#### For L (live cable)

Turn the digital multimeter to 750V AC, use your one hand to hold the metal end, and then the other hand insert the pen to the L port of the socket. See the following figure. If the multimeter shows 125, then you can see current live cable connection is standard. If the value is less than 60, then you can know current live cable connection is not proper or it is not the live cable at all.

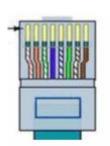

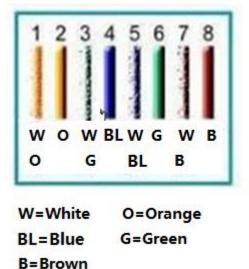

#### For N (Neutral cable)

Turn the digital multimeter to 750V AC, use your one hand to hold the metal end, and then the other hand insert the pen to the N port of the socket. See the following figure. If the multimeter shows 0, then you can see current N cable connection is standard. If the value is more than 10, then you can see there is inductive current and the neutral cable connection is not proper. If the value is 120, then you can know that you have misconnected the neutral cable to the live cable.

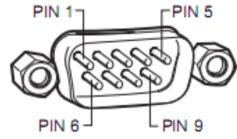

Here we are going to make standard RS-232 port and standard RJ45 (T568B). Please refer to the following figure for RJ45 cable definition.

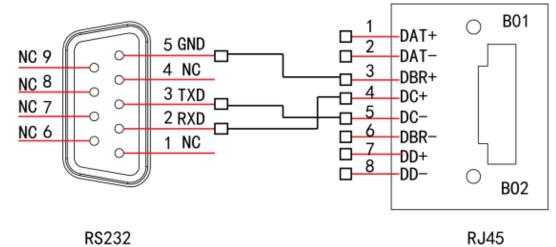

Please refer to the following figure for RS-232 pin definition.

#### **Cross Connection**

Please refer to the following figure for connection information.

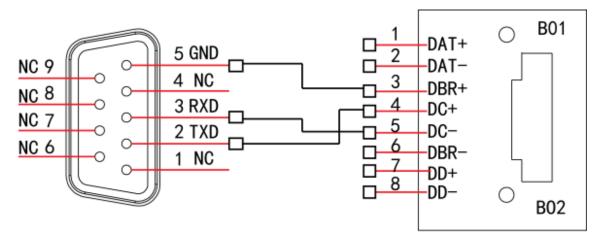

Please refer to the following table for detailed crossover cable connection information.

RJ45 (T568B)	RJ45 (Network cable)	RS-232	Signal Description
4	Blue	2	RXD
5	White and blue	3	TXD
3	White and green	5	GND

#### **Straight Connection**

Please refer to the following figure for straight cable connection information.

RS232

RJ45

Please refer to the following table for straight connection information.

RJ45 (T568B)	RJ45 (Network cable)	RS-232	Signal Description
4	Blue	3	RXD
5	White and blue	2	TXD
3	White and green	5	GND
